THE THIEF OF BAGDAD A GREAT ACHIEVEMENT

Which Started A Four Day's Run at The Prince Edward Theatre Yesterday; Also Opening of Mi lligan And Morrison Barn at Northam.

Douglas Fairbanks' amazingly romantic and dramatic story, heretofore thought impossible of achivement on the screen, "The Thief of Bagdad," was the big attraction at the Prince Edward Theatre yesteday and last evening, and which will be shown daily Tuesday, Wednesday and Thursday both afternoons and evenings. There is in this story a wonderful love tale to set your pulses going; a wealth of adventurous incidents that stir you to a rousing pitch of excitement. A new experience to see a Magic Rug soar above the house-tops and off into the sky bearing the Thief and the beautiful Princess of Badgad. Another new and strange experience is to witness a Winged Horse fly up to and through the clouds, bearing the Thief of Bagdad, of whom all nations, for hundreds of years, have been reading about in the tales of the Arabian Nights. You may have read about the Invisible Cloak but you surely have not seen it unles you have seen Douglas Fairbanks in "The Thief of Bagdad." Born of a poet's dream in Araby, this remarkable story was developed by Douglas Fairbanks into a beautiful reality. Nothing like it has ever been attempted; nothing like it has ever been seen; nothing like it has ever been accomplished. These statements may seem exaggerations, but when compared with the criticism of this picture wherever it has been presented, cause them to appear unappreciated.

Times sums up the matter justly and, according to all accounts, truly when he said that "The Thief of Bagdad" is a feat of moving picture art which has never been equalled or even approached." So also the Evening Telegram: "It is the greatest picture we have seen or ever expect to see.

The more important members of the cast are Julanne Johnston, formerly a member of the famous Morgan Dancers, who impersonates the Princess; So-Jin Kamayama, imported from Japan where he has been the leading Shakespearean actor, who impersonates the Mongol Prince, Anna May Wong, a charming little Chinese flapper, is seen in the part of the slave. Snitz Edwards is the Thief's evil associate; Bradon Hurst is the Caliph.

Another feature of the program is an interesting movie of the Milligan and Morrison famous barn at Northam. The photography is perfect, which brings out every detail and interesting to the end. Truly a great program.

School Sports

The annual school sports for the city schools will be held at the Abegweit grounds on Friday afternoon.

Every year the boys furnish a splendid afternoon's program, it is their day and they give of their best in friendly competition which has always been interesting to those who attend.

The school sports every year always brings out some new hope for future athletics on Prince Edward Island, all the best athletes of today and yesterday received their first training in preparation for school sports and it was there they got the encouragement to continue along in the events in which they had made the best showing.

On Friday afternoon then it is to be hoped that all who can will make it a point to attend the school sports and give the young fellows a big hand out in their endeavor to produce good, clean sport.

Already the boys are eagerly selling tickets and the happy smile with which they approach a prospective buyer should not be turned to a frown with a refusal. After buying the ticket do not think your duty is done, the boys are not selling the tickets for the money, but to solicit your support at the games, so when you buy a ticket put it in a convenient place, where it will remind you of the day, when you will as eagerly as the boy join them in their day of sports and encourage their effort, they will appreciate it more and you will enjoy it the more because you will find that the boys want you with them for more than the price of the ticket.

The Public Forum

TALKING THROUGH HIS HAT.

Sir,—I notice the Prime Minister of Canada told the electors at the Peel meeting that if he did not improve his position in Parliament by the present election he would ask for a second dissolution. Now if he does not improve his position this is the very thing that he need not ask for. A case of this kind occurred in Newfoundland a few years ago. The Prime Minister of that colony asked for dissolution and appealed to the country. The election resulted in an equal following for each party, and the Prime Minister asked for a second dissolution. The Governor told him he had had his chance and failed; that he did not possess the confidence of the country, and refused dissolution. The Prime Minister thereupon resigned and the Governor called on the leader of the Opposition to form a government. When the new government was formed the House was dissolved and the new Prime Minister was returned to power with a majority of followers. So, if this is the constitutional British usage, the Canadian Prime Minister is talking through his hat.

I am, Sir, etc.,
THE CALIPH.

ENDURANCE.

The Public Forum

(Continued from Page 4)

paper article, and Walter has been indulging in this sport quite freely of late.

"Breeder" evidently did not consider his letter worthy of a reply and I would not have taken any notice of him either, had he not referred to a friend of mine, who is not at present in the Province.

His reference was uncalled for and would not have been made had Mr. Jones used his brains instead of his temper when he read "Breeder's" letter.

"Breeder" did not quote Ennis Smith, notwithstanding Mr. Jones' statement to the contrary, but I will, and I trust it will do some good, for he says:—"Vixens milk tests from 8 to 11 per cent fat" and that he has found it advisable to fed high testing milk while the puppies are young (providing artificial feed is found necessary) but as the weather gets warm and the pups are growing, the fats should be restricted so as to promote bone and muscle instead of fat and underfur and then when the weather gets colder and the mating season approaches, more fats should be fed than can be found in low testing milk.

This makes it simple for the fox farmer using Guernseys or Jerseys for his milk supply, for all he has to do, is use his whole milk while the puppies need it and again in the Fall and Winter, then during the Summer, remove the cream and but down his Winter's butter.

Mr Smith does not believe in allowing foxes to swill milk at any season of the year, so why the cry for a big flow of poor milk, for fox farms, when water is so much easier to get and much better for thirsty foxes in fact foxes should never be allowed to drink milk at all but made to eat it.

His statement that the "Pan-American Test" in which our Breed won highest honors "was too ancient" for his consideration," is not very convincing especially when he did not avail himself of the chance of referring to a later test in which the Holstein topped the list for ECONOMY OF PRODUCTION, of butter and butter fat.

He says.—"The first Holsteins were brought to Canada in 1882, when the OTHER THREE PRINCIPAL BREEDS WERE FIRMLY ESTABLISHED."

I have before me Vol 1 of THE Canadian Guernsey Herd Book, and I find that out of the first 450 cattle registered in it, ONLY 47 of them were born before the year 1900, and ONLY THREE before the date set by Mr. Jones.

Still he says they were firmly established, in 1882, it will be interesting to hear him try and explain this little question away, or will he find it "TOO ancient for his consideration?"

He then makes the statment:—"If Holsteins were eliminated, babies would starve."

Mr. Jones no doubt has a theory of his own to explain, how the dear little things got along in Canada prior to the advent of the Holstein in 1882?

Mr. Jones may be too young to answer this question, but he said "I think I can supply, OR GET, the antidote etc," well let him GET answers if the question happens to be "too ancient" for him.

When he thought he was striking at me he said, I should steer a course towards some records, well I am, it may be news to him but I have in our barn, the Grand Champion Senior Bull Calf at the Amherst Winter Fair, he was second at the Royal, also a heifer which was second to the Grand Champion at the same show and some young heifers after the Grand Champion Bull at the Royal in 1923 so I am making a very fair record right now, for they say "experience teaches fools" and since Mr. Jones has forced this upon me I will give another record he steered me into.

Some years ago I bought a pure bred heifer from him for $225.00, I kept her till she had three calves, one bull and two heifers, when I was glad to get clear of her for an even hundred dollars, I kept both her heifers till they freshened after which I killed one of them for fox feed, for I was too conscientious to sell her to anyone as a milk cow, and altho' she was very fat the local butcher did not want her for he has different views to Mr. Jones in some respects.

After misquoting "Breeder" again he points out:—"The Guernsey Club paid for their advertising and said:— "During the last six months I have sold at a higher average myself, calves and all, and I paid nothing for advertising."

This is nothing to brag about, for he foolishly sold the best of his breeding animals to beat the average of all the cattle sold by a whole community, he said it did not cost him anything for advertising, with this I cannot agree for it cost him his best cow, and the Guardan said the other day:—" Mr. Jones now REGRETS having sold these animals."

His slur against Dr. Croken's tests is beneath contempt, and is only a poorly disguised excuse for not answering the question as to what breed of cattle give 2.5 milk.

Mr. Jones then addresses himself "To the mothers who buy Guernsey Milk."

I am ready to admit he knows how to feed Holstein Cows but what he does NOT KNOW about feeding babies is a revelation, even to me.

In an attempt to be little Guernsey and Jersey milk, he quotes Dr J. H. Kellog as saying: "An EXCESS of fat is injurious."

Now, "EXCESS FAT," like "ADEQUATE PROTECTION" may mean anything, common sense tells us that an "excess" of anything is not good, but unfortunately for Mr. Jones' argument, his authority neglected to state what constituted an "EXCESS OF FAT."

Is it one percent? Is it 5 per cent or is it ten per cent?

Goats milk which tests from 7 to 10 percent brings an exceptionally high price and is used exclusively in children's hospitals, when it can be procured.

Are we to understand from this that from 7 to 10 per cent IS NOT AN "excess of fat?"

The same authority says:—"The smaller amount of fat in Holstein milk is a decided advantage," but they produced no evidence in support of the statement and I will prove they are both wrong and that "the mothers who buy Guernsey milk" are not making any mistake.

All authorities tell us that the very best food for any young animal is its mother's milk, providing she is normal and healthy, we also know the analysis of mother's milk and cows milk and a study of each is all that is needed.

	Mother's Milk	Cow Milk
Fat	4%	4%
Sugar of milk	7%	4½%
Poteids	1½%	4%
Salts	¼%	¾%
Water	87%	87%

Now if Mr. Jones will follow me carefully I will prove he is wrong, First you will note the percentages in the above table, the Fat and Water content bear the same proportion in both, but the Proteids and Salts are three times as high in cow's milk than in mother's milk and the sugar content is higher in the human milk.

So there can be no misunderstanding, he should pause here and let this soak in.

Now to make cow's milk, so that it may be digested by a baby from birth till it is about nine months old, it must be diluted with pure water so as to make the different elements bear the same relationship to one another as is found in its natural food, that is the Proteids (curds) and Salts have to be reduced to one third their present strength this is done by adding twice as much water to Cows milk.

Pause again for reason given above.

Now, when we added the water we not only reduced the Proteids and Salts but we created a food with only 1 1-3 percent of fat instead of 4 percent, and to bring the fat up to the proper proportions it is necessary to add cream and the same is true of the sugar.

Now if Mr. Jones "can supply or get an antidote" for this condition without getting a high testing Guernsey or a Nannygoat, I would like to hear him explain it, unless he is going to use Holstein milk as a base, and mix it with Guernsey or Jersey Cream, to make it fit for young children.

His next argument is nothing more than an insult to your readers and it came all the way from Washington at that, he said:—"The U. S. Dept. of Agriculture says;—It is usually more important that the milk for infant feeding should be PUREER than it should be rich in cream."

Now if ever a man "put his foot in it" Mr. Jones is that man, for he just proved THE ABSOLUTE NECESSITY OF MILK "RICH IN CREAM, for does the above not say IT SHOULD BE RICH IN CREAM, BUT IT IS USUALLY MORE IMPORTANT THAT IT SHOULD BE PURE.

We go furthers than that, for we say, IT IS ALWAYS MORE IMPORTANT THAT THE MILK SHOULD BE PURE, than it should be rich in cream, but with our accredited Guernsey Herds we can have it BOTH PURE AND RICH IN CREAM.

Now it may just be possible, that he can find some Department that will recommend the farmers to breed from their poorest testing cows, but when one considers all the time and energy being spent in building up a high testing lot of Cattle both in Canada and the U. S. and even by Mr. Jones himself, it rather knocks his argument against "poisonous fat", "out of the fat and into the fire."

I am glad to see him admit "Fat milk is nice to take," the rest of the quotation I did not use for he has not proved it's "bad, in after effects," no doubt because he has none to experminent with, and if he takes my advice he will not try it, if he wishes to continue on with what he has.

Trusting "Breeder" will pardon me for butting in and thanking you for the space,

I am Sir, etc.
