Does it not seem more effective to breathe in a remedy, to cure disease of the breathing organs, than to take the remedy into the stomach?

Vapo-Cresolene

Established 1879.

Cures While You Sleep

It cures because the air rendered strongly antiseptic is carried over the diseased surface with every breath, giving prolonged and constant treatment. It is invaluable to mothers with small children.

Is a boon to asthmatics.

—FOR—

Whooping Cough	Bronchitis
Croup	Coughs
Catarrh, Colds	Grippe and Hay Fever

The Vaporizer and Lamp, which should last a lifetime, together with a bottle of Cresolene, $1.50. Extra supplies of Cresolene 25 cents and 50 cents. Write for descriptive booklet containing highest testimony as to its value.

VAPO-CRESOLENE IS SOLD BY DRUGGISTS EVERYWHERE.

Vapo-Cresolene Co.

180 Fulton Street, New York — 1651 Notre Dame Street, Montreal

Not Only Relief; A Cure.

ASTHMA

Many discouraged Asthmatics who long for a cure or even relief lack faith to try, believing a cure impossible. HIMROD'S ASTHMA CURE is truly a grand remedy and possesses a virtue unknown to other remedies that not only instantly relieves but cures.

The late Sir Dr. Morell MacKenzie, England's foremost physician, used HIMROD'S ASTHMA CURE constantly in his private practice. If you are discouraged send for a generous free sample. It will not disappoint you.

HIMROD'S ASTHMA CURE is a standard remedy prescribed by many eminent physicians and sold throughout the world for over a quarter of a century. A truly remarkable testimonial in itself.

HIMROD MF'G CO., 14-16 Vesey St., New York. For sale by all druggists.

HIS DEATH CHAMBER.

A LAWYER'S PLEASANT SURROUNDINGS FOR DEFERRED BURIAL.

A Chance for Escape Without the Usual Gruesome Horrors Attendant Upon Being Buried Alive - A Plan Which Looks Very Feasible.

Alfred E. Giles, of Hyde Park, Boston, at one time a prominent Boston lawyer, does not intend to be buried alive. He has gone to considerable expense in making arrangements for the disposition of his body when death shall have been pronounced which will preclude all possibility of such a catastrophe.

Mr. Giles believes that very many cases of suspended animation are called death, and that those so affected are buried alive. So thoroughly impressed is he with this idea that he has fitted up a chamber in his home in which the bodies of his wife and himself, when the spark of life is believed to have departed, will be laid until it is absolutely certain that the earthly end is reached.

The room which he has set apart for this unique purpose is at the back of the house, and the only entrance from the rest of the house is through a secret door in the back of a secluded closet. The apartment is on the ground level and looks out upon a spacious flower garden and orchard. Though seldom entered, it is attractive to the living and well calculated to dispel any unpleasant thought which might arise associated with its intended use. Everything is bright and cheerful.

Pictures hang upon the walls, rich rugs are on the floor, there is a set of bookshelves well filled with pleasant literature, there are comfortable chairs, a table on which stands a vase always filled with blossoms and in one corner of the room is a single bed.

The only door besides the secret one connecting the death chamber with the closet opens on the back lawn. It is guarded by latticework which incloses the whole door, and, while preventing intrusion, admits light and air. Small windows protected by stout wire screens also permit a circulation of air.

"In this room," said Mr. Giles, "Mrs. Giles shall rest and so shall I, when we are supposed to have died, until it is absolutely certain that we are physically dead. When death is determined we shall be cremated and our ashes scattered over the flower garden out there to make the plants grow and bloom.

"I am convinced that thousands of people are buried while animation is simply suspended, and that life would be restored if the necessary time were given. The physicians have thirty-four tests for death and every one of them has been proved to be open to failure.

"The only safe test is decomposition. When the body begins to decay it is dead, and no one should be buried until such a condition comes. The mind may be active though death seems apparent. Think of the agony of a person in that condition facing the grave!"

This is not a new fad with Mr. Giles. When he was forty years old he began to make a collection of the records of cases of suspended animation and supposed dead persons coming to life. The record is astonishing. He has gone to no special pains in the work, merely recording the instances which came to his notice.

"The Nineteenth Century has estimated," he said, "that of every 300 persons believed to be dead taken to the morgue in Paris, one comes to life. If there have been so many cases made public, think of the number that in the natural order of things have escaped notice. It is not unreasonable to believe that fully as many persons have been buried alive as have been found to be alive at the last moment."

Mr. Giles related several personal experiences and others which have come to his notice. He spoke of one young woman, named Delia Samuelson of Chicago, who died recently of consumption. She requested that her body be kept in a vault for a year and be visited each day by her mother and grandmother, and that it be pricked with pins to determine whether or not there were signs of life. Her request will be complied with as long as possible."

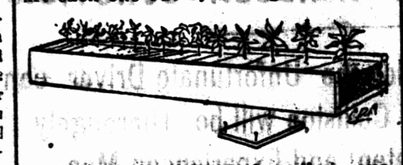
This Hyde Park lawyer is by no means alone in his belief. Some of the best known citizens of Boston entertain the same idea with regard to premature burial, and the same belief can be found well established in all parts of the world, but Mr. Giles is certainly original in having arranged a death chamber in his residence.

George T. Angell, president of the Society for the Prevention of Cruelty to Animals and editor of Dumb Animals, is one of the foremost advocates of deferring burial until it is certain that death has ensued. His own mother was thought to have died and the funeral service was being held when signs were detected, and she was speedily restored to health. Mr. Angell is now urging the formation of a society, the object of which shall be the prevention of premature burial.

The Poultry Keeper describes a simple and effective home-made contrivance for testing eggs, which is made as follows: Take an old stovepipe and set it over a lamp; now with a canopener cut a two-inch hole in the side, about the height of the flame; now take a black piece of cloth about four inches wide and long enough to go clear around the pipe, cut a one-inch hole in the center of the cloth, then put the cloth around and sew the ends, with the hole in the cloth over the two-inch hole in the pipe; punch a few holes in the bottom of the pipe, for draught; and you will then have a good tester that should not cost you anything, as the tester can be made of old stovepipe, two fruit cans soldered together, a piece of rain spout or an old oil can with both bottom and top melted out. To test eggs simply set the pipe over the lamp and hold the egg to the cloth. A perfectly fresh egg is clear and alike throughout. A fertilized egg that has been under a broody hen a couple of days will show the air cell at the large end, and a little later a cloudy, spidery mass. Any departure from the uniformly clear appearance is an indication of a lack of freshness.

Device for Early Plants.

Those who start early garden or flower plants in the house will do well to consider the plan shown in the accompanying sketch. The seeds are planted in a very long and narrow box, one end of which is tacked upon the outside so that it may be easily removed. Then with a sharp shingle of the right width, cut the earth between each plant, and beginning at the end lift each one out by sliding the shingle



in under each square of earth in succession. In this way the earth will not be disturbed at all, an important point.

Thinning Orchard Trees.

Everyone can and does take an interest in the fruit garden. It is a pleasure to see a well kept orchard, with trees in a thrifty condition, for then we may expect fine fruit; but without paying attention to the trees first quality fruit cannot be had. When the weather will permit, the present is a good season to thin out apple trees, pear trees, etc.; of course, to thin them out in a satisfactory manner, requires judgment. In going around we often see neglected trees with far too much wood in them; thin any such, that the fruit can get light and sunshine. It is better to have one barrel of first-class apples than two or more of inferior quality.—American Gardening.

The Use of Barn Manures.

Barn manures are generally more economically used when applied to farm crops than when applied to orchards, says an exchange, yet they can be used with good results, particularly when rejuvenating old orchards.

G. T. R. STATION BURNED.

BROCKVILLE, April 15.—The Grand Trunk Railway station at Mallorytown, Ont., was completely destroyed by fire Monday night. The fire appeared to have started in the oil room, and has gained considerable headway before discovered.

Sudden Changes Bring Many Colds

Everywhere You Hear People Coughing and Wonder How Many of the Colds Will Prove Fatal.

Dr. Chase's Syrup of Linseed and Turpentine.

Although Dr. Chase's Syrup of Linseed and Turpentine has by far the largest sale of any similar medicine, there must still be many persons who have not yet tested its merits. They have read about it, perhaps, or heard someone speak about its great curative properties, and have concluded that it was somewhat similar to the "cough mixtures" they have been using.

This is a mistaken idea for Dr. Chase's Syrup of Linseed and Turpentine is far more than a mere cough remedy.

No mere cough remedy has such a thorough and far-reaching effect on the system as has this great prescription of Dr. Chase, and that is why it is so remarkably successful in curing croup, bronchitis and asthma.

Croup, bronchitis; whooping cough, asthma and severe chest colds are positively cured by this preparation, and it affords the greatest relief even to the consumptive in the most serious stages of his disease.

Besides aiding expectoration and clearing the air passages, Dr. Chase's Syrup of Linseed and Turpentine allays the inflammation of the bronchial tubes and lungs and heals the delicate membranes, which are made raw and sore by disease and violent coughing.

Dr. Chase's Syrup of Linseed and Turpentine is indispensable in the home. Twenty-five cents a bottle at all dealers, or Edmanson, Bates & Co. Toronto.

To protect you against imitations the portrait and signature of Dr. A. W. Chase, the famous receipt book author, is on every bottle.

Laxative Bromo Quinine Cures a Cold in One Day, Grip in 2 Days. E. W. Grove on every box. 25

A Grateful Innovation.

Stockings made to represent a strapped boot front will at last permit the wearing of slippers in the street, a grateful innovation in the hot weather months, when every inch of extra foot gear is to be avoided. These straps are woven in the stockings and made to match the color of the shoe—tan, white or black. They are so well made that they would deceive the most practised eye.

Herring Red Kid Gloves.

Herring red kid gloves have been found to make the hand look smaller than tan ones, and they are worn by the elite whenever they can possibly be made to harmonize with a gown. A red belt or tie or lapel or hatband is considered excuse enough, and so the red glove is at this moment more in evidence, bicycling, yachting, driving and walking, than any other.

Azalea.

A most popular shade of pink at the present moment is known as the azalea. It is clear—it might almost be described as transparent, and has a depth of red in it. Azalea-colored lawn over black silk is a combination of the most striking and artistic sort.

"77"

If the use of Dr. Humphreys' Specific "Seventy-seven" does not "break up" your Cold promptly, then alternate with Specific Number One,—this will accelerate the action of "77."

At Druggists, 25 cents each, or mailed. Humphreys' Med. Co. Cor. Wm. & John Sts., N. Y.

MARVELLOUS DISCOVERY OF GOLD, SILVER AND COPPER ORE MADE ON PROPERTY OF THE EASTERN NATIONAL COPPER COMPANY, Ltd., AT CHETICAMP, CAPE BRETON

ORE-BEARING SCHISTS From 75 Feet to 100 Feet Wide,

AND TRACED FOR 5000 FEET ON THE LENGTH; DEPTH OF 85 FEET ALREADY PROVED

MR. M. V. GRANDIN, engineer in charge of the development work, reports the discovery of an immense body of gold, silver, and copper bearing ore from seventy-five to one hundred feet wide on the property of the Eastern National Copper Company, Limited, at Cheticamp, Cape Breton. This is probably the first known instance in Eastern Canada of the unearthing of a large deposit of metalliferous ore such as made the mining industry of British Columbia, the Western States and Mexico of great magnitude. The discovery in Cape Breton tends to confirm the opinion of mining experts that Cheticamp is one of the most important mining districts in Nova Scotia. The Eastern National Copper Company, Limited, owns some of the finest sections of this district and is now engaged in blocking out a body of ore estimated to contain 160,000 tons, worth $10.00 per ton or higher.

The development work is well advanced and is proceeding night and day. All the surface buildings have been completed and the main slope is now down eighty-five feet, all in ore, and the calculations of the prospectus as to the thickness of the ore body and assay value per ton have been exceeded fifty per cent. Another gang of men will shortly attack the deposit from another point. It is estimated that every dollar spent underground opens up two hundred dollars worth of ore.

The value of the big new deposit has not yet been determined, as it has not been fully explored.

THOUSANDS OF TONS OF ORE ALREADY IN SIGHT. Every Day Adds to the Proved Value of the Mine.

THERE is no safer form of mining investment than good gold-copper deposits, as they occur in immense veins and carry regular values. Many of the private fortunes of the United States owe their origin to a lucky investment in a gold-copper proposition. The property of the Eastern National Copper Company, Limited, is undoubtedly one of the most valuable in the country. Besides its extensive mining claims the mining company controls timber for mining and building purposes and will also have natural water-power.

THE extension of the MacKenzie & Mann Railway from Broad Cove to Cheticamp in the spring will give this great mining enterprise rail as well as water communication with all points.

The undertaking of this Company is a sound home enterprise, organized by prominent Halifax business men, without the heavy over-capitalization, watered stock, promoters' rake-off, directors' perquisities, &c, which characterize many foreign companies. The company is capitalized at the moderate figure of $500,000, and one-half the entire capital stock has been placed in the treasury in reserve. 10,000 shares of the other half are being sold for development.

A LIMITED AMOUNT OF STOCK IS OFFERED AT $3.00 PER SHARE (30 CENTS ON THE DOLLAR) PAR $10.00.

The stock was started at $1 per share, and has advanced steadily to $3. Next advance will likely be to $5, and we expect that it will be quoted at par—$10—in the Spring, based on ore actually blocked out. Less than 1000 shares will be sold at the present figure of three dollars.

Applications for Stock Should be Addressed to

Alfred Bennett & Co., Fiscal Agents,
