## U. S. STEEL

CLEVELAND (AP) — Current strong demand for steel has brought about a need for further expansion in the industry, "Steel" the metalworking weekly, says Sunday.

The iron and steel division of the Business and Defence Services Administration has recommended that United States ingot capacity be boosted from today's 125,800,000 tons to 150,000,000 by 1960 to provide a sufficient margin for defence.

Growing civilian demand has absorbed much of the margin created for defence by the steel expansion program following the Defence Production Act of 1950, the board said.

Steel says ingot production was up two points last week to 95.5 per cent of rated capacity, the highest since mid - June. Some mills are operating at the highest level in two years, it added.

NO SIGNS OF LET-UP

The automobile industry shows no indication of a letup in its demand for steel. Car sales continue high and are expected to be boosted by introduction of the 1956 models.

Steel explains that high auto production pulls heavily on cold-rolled steel sheets, the mills' biggest product tonnage-wise. It says the auto industry took 54 per cent of the sheets produced in the first six months of this year.

The magazine's price composite on finished steel was unchanged at $127.41 a net ton last week. That on steelmaking scrap was up 33 cents at $44.33 a gross ton.

MILITARY SHIPMENT

FAMAGUSTA, Cyprus (Reuters) The British aircraft carrier Ocean arrived at Famagusta Saturday with her flight deck and holds crammed with vehicles and military equipment for the buildup of anti-terrorist forces in this east Mediterranean island. Reinforcements have been pouring into the island during the last week to counter terrorist activity for union of this British colony with Greece.

## N. Y. STOCKS

NEW YORK, (AP)— The stock market advanced last week for the fourth consecutive week.

It ended with a final burst of strength that put it into record high ground, but despite glittering showing, the performance was compounded of about 75 per cent caution and 25 per cent selectivity.

The market's sweeping advance now has continued just past the two-year mark, and prices on average again are near an area that in the past has proved to be vulnerable to quick reactions.

The five most active issues last week on the New York stock exchange were Benguet Consolidated Mining up ⅜ at 1½ on 404,900 shares; Cuneo Press up 1 at 11¾; Sperry Rand up 1⅜ at 25⅛; Phillips Petroleum up 2⅛ at 75g, and U. S. Steel up ⅛ at 60.

Canadian issues on the New York stock exchange had a mixed appearance at week's end. Distillers Seagram added ¼ at 44 over the five sessions and International Nickel was up ⅛ at 85. Canadian Pacific slipped ⅜ to 34⅝ and Dome Mines remained unchanged at 16⅛.

Giant Yellowknife and Royalite Oil were both off ⅛ on the American stock exchange closing at 6½ and 15⅞ respectively.

## Plan Start On Gas Pipeline

OTTAWA (CP) — Trans-Canada Pipe Lines Ltd. is planning an immediate start on the $27,000,000 Toronto-Montreal leg of its proposed 2,200-mile Canadian natural gas pipeline.

Company officials will go before the board of transport commissioners Thursday for permission to build this 335-mile stretch with a branch line at Morrisburg, Ont., to feed the fuel northward to Ottawa and Hull, Que.

If the board approves, the company plans to have the line completed by late 1956.

# Expect Improved Relations In Canada-U.S. Trade

OTTAWA (CP)—A move which undoubtedly will help improve Canada-United States trade relations is the U. S. decision to remove import curbs on oats and barley.

The controls come off Sept. 30 just four days after Canadian-American diplomatic, trade and economic leaders meet in an attempt to solve some of the economic difficulties between the two countries.

Canadian officials are still concerned over American restrictions on imports of rye, dairy products and the U. S. "giveaway" wheat program which, they say, has hampered Canadian wheat sales in overseas markets.

But they welcome the oats-barley move as an expression of "good trade faith" on the part of the Americans. The removal comes at a time when Canada's grain production has increased, requiring greater marketing efforts. The U. S. has been a big market for Canadian coarse grains.

It is felt that the American action, announced Sept. 9, likely will soften Canada's approach to the Sept. 26 gathering when top spokesmen from the two countries meet for the second conference of the joint economic and trade committee.

The Ottawa meeting will be attended by External Affairs Minister Pearson, Trade Minister Howe, Finance Minister Harris, Agriculture Minister Gardiner and on the U. S. side by State Secretary Dulles, Agriculture Secretary Benson, Commerce Secretary Weeks and Treasury Secretary Humphrey.

CANADIAN PRICES HIGHER

Major reason for removal of the U. S. oats - barley restrictions is price. President Eisenhower observed in his announcement that Canadian prices have been higher than those in the U. S.

"Unless there is considerable change in present conditions," he said, "it appears unlikely that oats and barley would be imported in such quantities as to interfere materially with domestic price support programs."

The curbs were imposed Oct. 1, 1954. Until Sept. 30, 1955, Canada could ship only 39,300,000 bushels of oats and 27,225,000 bushels of barley. This was a lot less than Canada shipped in the 1953-54 crop year, but, as it turned out, she filled only about one - half the quota because of price and other factors.

In the 1953-54 crop year, Canada shipped 65,878,000 bushels of oats and 36,921,000 bushels of barley to the U. S. In the following year, exports dropped to 14,811,000 bushels of oats and 19,086,000 of barley.

# Chrysler's 1956 Models Shown At News Conference

By DAVID J. WILKIE

DETROIT (AP) — Chrysler Corporation's 1956 model cars, introducing push button automatic drive control, numerous new safety features and a new ultra- modern body design concept were displayed at a press preview Monday.

The showing, at Chrysler's proving grounds, disclosed that Chrysler, like other car makers, has been carrying on extensive safety tests.

In these tests, particular emphasis has been given to a new type door latch, designed to prevent doors from popping open in any but most unusual crashes. They will be standard on all Chrysler Corp. cars.

PUSH-BUTTON DRIVE

The push button drive, to be standard on all Plymouth, Desoto, Dodge, Chrysler and Imperial models equipped with automatic transmissions, will be controlled from the instrument panel, left of the steering wheel. The selector unit consists of buttons for neutral, low, drive and reverse which are illuminated for night driving.

Chrysler emphasizes that the left-of-wheel installation keeps the buttons out of reach of children. It noted also that shifting with the new device is as gentle as operating a push button radio.

Linkage between the control and transmission consists of a single armored cable. Actuation of the various gears is accomplished when the cable moves varying distances as the push buttons are depressed.

STARTS ONLY IN NEUTRAL

The device is designed so the engine cannot be started in any gear except neutral. Another built-in safety factor prevents the transmission from accidentally being shifted into reverse at speeds above 10 miles an hour.

Offered as optional equipment are safety seat belts and a newly designed vacuum-operated brake system with automatic transmission installations.

Chrysler calls the new body styling concept "flight-sweep." Rear fenders and quarter panels feature the fin treatment. Tail light units, integrated into the fins, carrying out the aircraft motif evident in the over-all styling.

## W. R. Jenkins Detroit Bound

W. R. Jenkins leaves Sept. 19 for Detroit where he will attend the annual meeting of the Federation of Automobile Dealer Associations of Canada. Mr. Jenkins is a director of F. A. D. A. and President of the Provincial Association.

For the first time in its history, the Federation of Automobile Dealer Associations of Canada will hold its annual Convention in an American city. Detroit has been chosen as the place for the next Convention, scheduled for September 20, 21 and 22 at the Sheraton-Cadillac Hotel. Naturally the Automobile Dealers of Windsor will play an important part in the Convention, which will attract more than 1,000 Canadian Automobile Dealers.

Election of a new President to succeed Reg Howell of Toronto will take place at the Convention.

Main themes to be discussed at the Convention include how to sell more automobiles; excise tax and sales tax on automobiles; imported vehicles; traffic and highway safety problems; training of automobile personnel.

## Jasper Park Lodge Close. For Season

JASPER PARK LODGE — After possibly the most successful season in its long life in the Canadian Rockies, Jasper Park Lodge closed its 1955 season Sunday. The lodge remained open three days longer than usual this year in order to handle the annual meeting of the Alberta Society Petroleum Geologists which brought more than 800 delegates to Jasper. Prior to this the Independent Natural Gas Association of America, holding its first meeting outside the United States, brought four hundred delegates.

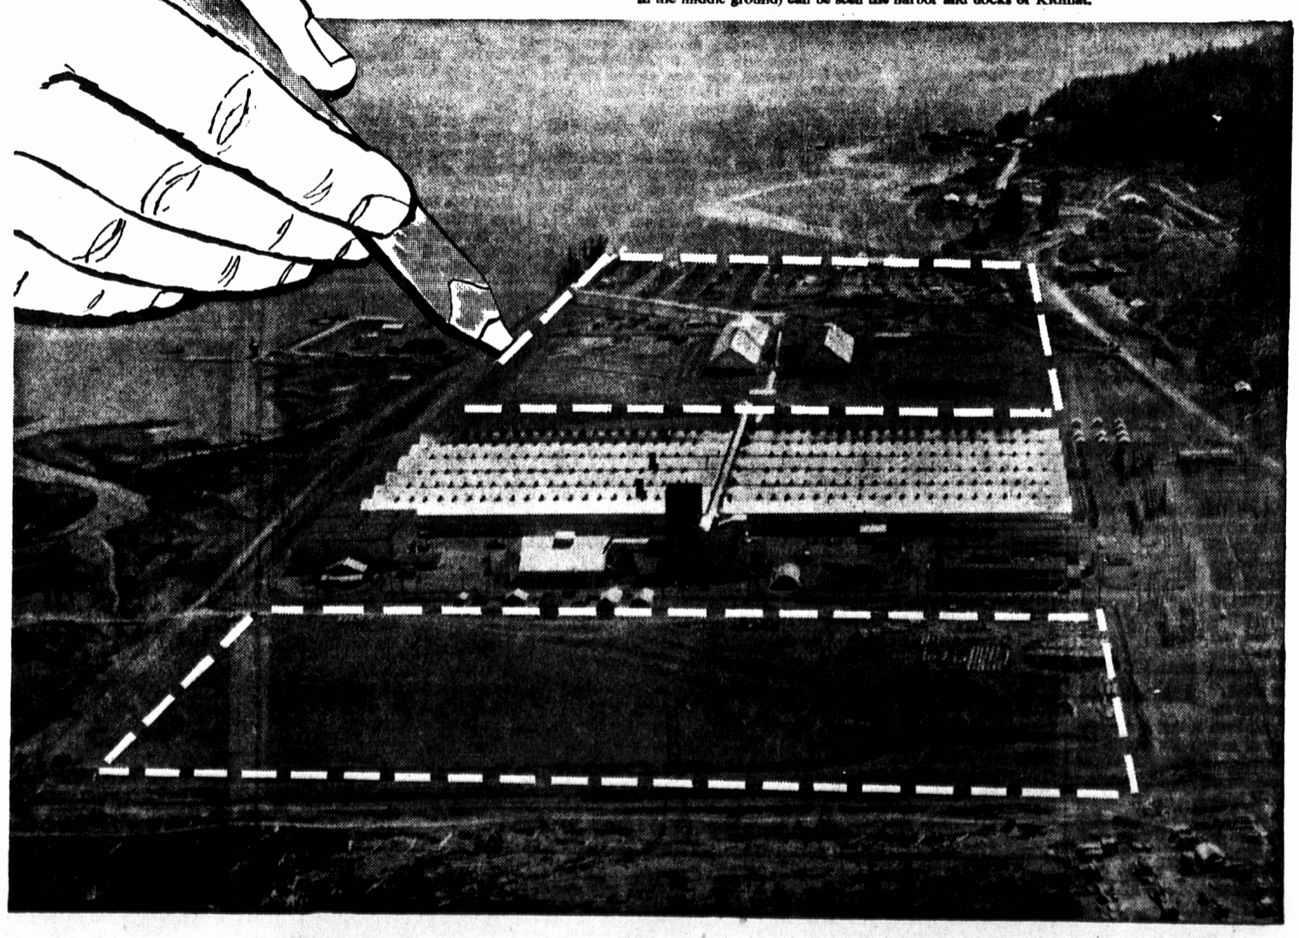
"We have closed a tremendous season" said Robert Sommerville, general manager of the C. N. R. Hotel system. "The totem pole golf tournament was the most successful in history and brought players from all parts of Canada and the United States. Our convention business was heavier than usual and the weather was really wonderful throughout the season.

"Our bookings for next year are running heavier than usual and it looks as if the Canadian Rockies will again be a focal point in Canada's 1956 tourist industry," declared Mr. Sommerville.

# Kitimat grows

Already Alcan's big new West Coast smelter goes ahead with TWO major increases to meet the rapid growth in demand for Canadian aluminum

The broken lines on the photograph roughly indicate the additional area to be occupied by new smelters and other buildings. Beyond the present plant (the aluminum structure in the middle ground) can be seen the harbor and docks of Kitimat.



In August, 1954, only 3½ years after ground was broken, the Kitimat smelter commenced production of aluminum with an annual capacity of 91,500 tons. Almost immediately a 60,000-ton extension was started. And in the spring of 1955 the decision was made to proceed with a flexible program to add a further 180,000 tons to ingot capacity.

...A progressive increase to 331,500 tons, more than three times the size of the original installation, and well on the way to our ultimate Kitimat goal of 550,000 tons a year.

"This continuing expansion of Kitimat in successive stages", stated Aluminium Limited president Nathanael V. Davis, "should, we believe, help to keep pace with the growing free world demand for aluminum and particularly the demand in our major export markets, the United Kingdom and the United States."

The new facilities will go into production step by step, with the first unit starting up in the fall of 1956. It is expected that the present building program will be completed in 1959.
