SECOND DAY OF P. E. I. TEACHERS' CONVENTION. Thursday morning-The President took the chair at 9.15 o'clock. After the reading of the minutes, G. Le Lacheur of the McDonald College, St Anne de Bellevue, addressed the Convention.

His subject was "Some Hints on Education," "Educational systems grow out of the tendencies of the times" was the opening thought. In support of this the speaker instanced the different educational ideas throughout the past.

Today the time is ripe for the introduction of natural sciences into the schools. A comprehensive review of the steps that have been taken in the different provinces of the Dominion into the rural schools. This was followed with the following hints, the aim of education should be to attend to the health of the scholars by attention to seating, ventilation, and physical culture. Another aim should be to keep the child at school as long as one can-by a proper grading or classification to enable the pupils to make the most of his time.

At the conclusion of the address the following took part in the discussion, Mr Dewar, J. P. P., Prin Seaman, Prof Robertson.

The President's address was read in this address reference was made to King Edward's death. The report of the Education Commission, the petition which was presented to the Legislature signed by 6000 rate payers. The response to which was that the Government proposed to take action, but that the time was too short to do anything during the last session. Scholarships were referred to-also change of school readers-and the course of study. Discussion of the address was deferred till later.

Arthur Simpson addressed the convention, contrasting the educational advantage of today with his own school days. He thought that the present day salaries were too small. He gave amusing incidents of his early school days. Thought that agriculture can only be properly taught in a thoroughly equipped Agricultural College. Thought that love of country, importance of agriculture, friendliness, a community of interest, respect for their fellow scholars, should be insisted upon in the schools of the present day.

This address was discussed by Prin Campbell, Prof Robertson, Inspector McCormac, Mr LeLacheur and Mr McKinnon.

Evening Session-The public meeting opened at 8.30, P. Anderson presiding. The opening number was a vocal solo by Mr. Kaye. In his opening remarks the chairman referred to his pleasure at seeing so many teachers present.

Inspector McCormac read an admirable paper, subject, "The Teacher in the Community." The teacher should make a study of the public questions of the day, and should be ready in a fearless yet gentlemanly way to express himself on these questions. He should cultivate a warm and sympathetic interest in the questions that affect the community in which he dwells. The community's duty to the teacher was forcefully presented.

Hon. F. L. Hazard, President of the Board of Education, explained fully the provisions of the Strathcona Fund for the promotion of physical drill and military drill in the schools of the Dominion. He also explained the efforts that had been made to have the full beneficial benefit of the proposition to apply to female teachers; but this had not been effected. He asked for an expression of opinion by the convention before closing.

The full and clear explanation made by the Premier was greatly appreciated by the teachers present. He expressed his fullest sympathy with the teacher that the teacher should be better paid.

J. A. Mathieson, leader of the Opposition, in an excellent and forceful address, referred to his own experience as a teacher. He thought that in the past too much attention was given to the analytical and too little to the constructive. He urged that not too much of the details of the history text book should be required of the pupil, also of the geography. The aim of the school should be to fit the child for life, to this end the changing conditions should be observed and our schools should aim to fit the child to meet the changed conditions.

G. W. Hay, St. John, briefly referred to his pleasure at being present at the meeting, but would not make a speech at the late hour.

Prof. Barlow gave very acceptably two solos beautifully rendered. Miss Reta McDonald delighted the audience by a very gracefully performed dance.

This morning the convention will meet at 9 o'clock.

BORN. TAYLOR-At Montreal, on Sept 17th, 1910, to T. H. and Mrs Taylor, a daughter.

OFFER-In this city, on September 22, 1910, to James D. and Mrs. Offer, a son.

THE STEEPLEJACK

The successful "steeplejack" must possess determination, perseverance and ingenuity. He must solve many a practical problem in hoisting great blocks aloft. He must know how to fasten a hook over the summit of a sky-scraping chimney. He must have the nerve to paint a steeply that sways like a pendulum at the steepest top. He must be able to tear down, build up, gild, paint, place electric wires and do many another task that would be difficult enough on the solid earth.

But a steeple is not the most difficult height to climb. Straight, tall chimneys are the hardest of all. There a man has to work with might and main to lift himself inch by inch from the ground to the top. Sometimes the top is 300 feet high. When it is reached a hook is placed over the edge, a pulley is made fast, the swinging chair is hauled up and work begins.

When the chair is near the top it is easier to work, because the ropes are short, but when they lengthen the ground is approached, there is a tendency to swing, and the wind gives impetus.

The steeplejack's safety depends upon the hook, and until he has raised himself almost to the top it is impossible for him to see whether or not the hook has been properly adjusted. More than once a steeple climber has seen, within 10 feet of the top, that the corner of the iron, and the collection of foot have thickened the wall that the hook is merely balancing on the topso that the slightest pull in the wrong direction would drag it off. Again, the bricks are often loose and the top and the hook is likely to tear them away.

One of the natural difficulties to conquer is the swaying of all high steeples and chimneys. In a gale a steeple pull will sway a foot, and a half. Usually it sways from seven to nine inches. Painting it means reaching for a spot on the right side and finishing it on the left, and when making a dive for it on the left, to see it sway back to the right. Yet in spite of the constant danger, a born steeplejack exists in his work, and is at home, like the ironworker in the skyscraper, only when high above the world. He can stand triplingly at any height if he can have two and a half square inches to bear his weight.-Harpers' Weekly.

Important Telegraphic News of the week for Saturday Subscribers.

ST. JOHN, Sept. 19-The chapel car of the Catholic Church Extension Society of the United States of America, the history of which is generally known throughout the continent, arrived in this city Saturday.

The car was left open for public inspection and all day long it was the centre of great interest. It was estimated last evening that over ten thousand people had paid a visit to the car.

The car is very simply arranged and inside resembles a village chapel. The altar is located at the extreme end of the car and with the pews kneeling as well as sitting accommodations are provided. In addition to the chapel, the car has also sleeping apartments and other necessary housing accommodations.

The Catholic Extension Society has two branches, one in the United States with headquarters at Chicago, and the other in Canada, with headquarters in Toronto. By a strange coincidence, Prince Edward Island clergymen are at the head of each of the branches. Dr. Kelly is in charge of the American branch and Dr. A. E. Burke of the Canadian.

Dr. Roche, who is at present travelling in the car, is a man of literary note, being editor of the Catholic Extension Society magazine, George de Hennessey, who is also a P. E. Island man, is the superintendent of the car.

All through the United States and over the C. P. R., the car has been carried free of charge.

TRURO, Sept. 19-What looks like a case of desperate murder came to light this morning when E. J. Perry gave himself up to the police.

He told a story of having been attacked by Mrs. Maud Wright in her work on Foundry Mill and killing her in self-defence.

The woman's body was found covered with blood and with her throat cut from ear to ear.

Perry exhibited cuts on his wrist and throat to substantiate his story of the attack on him, but the cut appeared to be self-inflicted.

The Wright woman had a rather checked career and her husband is said to be living in the West.

Perry belongs to Charlottetown but has been in town all the
