THE WONDERFUL CHEAP MEN.

INDIAN

EXECUTED

Walla Tonka Shot for Murder.

BULLET MISSED SPOT

Water Poured Down His Throat to Hasten Death by Strangulation.

GOODLANDS, I.T., July 15.—William Goings, the Choctaw Indian, better known as 'Walla Tonka,' was shot at Alikichi yesterday under sentence of the Choctaw court for murders. The execution was a sickening sight. The brave young Indian walked to the place designated by Sheriff Watson, without a tremor. A few minutes before Goings was led out, four Choctaws appeared bearing his coffin. It was deposited in front of the Court House. Near it a quilt was spread. The condemned Indian, accompanied by Sheriff Watson and a deputy, and escorted by 30 light horsemen, marched down the line of spectators. Goings then knelt on the quilt, blindfolded. The sheriff bared his bosom, pointed to a spot over his heart, stepped back four paces, rested a rifle across a bench and fired. The bullet entered the breast, but missed the spot. Goings fell backward and moaned for an hour before expiring. Water was poured down his throat a number of times to hasten death by strangulation. While the execution was proceeding, District Attorney Clay remarked: "We are making history." It remains to be seen what action the United States Government will take for defiance of the writ.

The crime for which Goings was shot was for the murder of his uncle, Mason Goings, in December, 1896. He was sentenced to be shot on Aug. 25, 1897, and the court granted a respite that Goings might play baseball with the nine of the Choctaw Nation during 1898.

At a late hour on Wednesday night a writ of habeas corpus was dispatched to Judge Abner James, but he ignored it and ordered the execution of the prisoner to take place.

Baptist Young People.

Richmond, V., July 13.—The Baptist Young People's Union of America met here today in its ninth annual convention. The sessions, which continue until Sunday night, are held in the Auditorium at the exhibition grounds. The building is elaborately decorated and in honor of the Canadian provinces the British flag is conspicuously displayed. There were four thousand persons at the opening session, and the trains throughout the day are bringing in more delegations.

Save the Babies.

Thousands of them die every summer who could be saved by the timely use of Dr. Fowler's Extract of Wild Strawberry.

There is not a mother who loves her infant but should keep on hand during the hot weather a bottle of Dr. Fowler's Extract of Wild Strawberry.

There is no remedy so safe and so effective for the diarrhoea of infants, and none has the endorsement of so many Canadian mothers who have proved its merits, and therefore speak with confidence. One of these is Mrs. Peter Jones, Warkworth, Ont., who says: "I can give Dr. Fowler's Extract of Wild Strawberry great praise, for it saved my baby's life. She was cutting her teeth and was taken with diarrhoea very bad. My sister advised me to get Dr. Fowler's Extract of Wild Strawberry. I got a bottle and it cured the baby almost at once."

Eminent Illinois Scientist Thinks He Has

MASTERED THE SECRET

"The Secret of Long Life is in the Destruction of Parasitism."

JOLIET, Ill., July 13.—Dr. Romaine J. Curtis of this city, an eminent authority and writer on bacteriology, who formerly held the chair of this science in the Chicago College of Physicians and Surgeons has written an open letter to Andrew Carnegie, in which he states that if the human being adapts his environment to his life and the possibilities of his organism he can live 1,000 years; that the secret of long life is the destruction of parasitism, and that the establishment of an institution for the teaching of hygiene would require \$50,000,000 but would be the greatest investment made for human welfare since the birth of Christianity.

Further, he invites Mr. Carnegie to supply the necessary money, and so become the world's greatest benefactor to mankind.

The Big Exhibition at Halifax.

The advertisement of the Provincial Exhibition at Halifax to be held from Sept. 23rd to 30th inclusive, reappears in our advertising columns of this issue.

The prize list has been issued and may be had by dropping a postal card to the Secretary. It shows an increase in prizes of one thousand dollars, principally in departments of cattle, sheep, poultry, agricultural products, and fish. The prizes for Grade cattle have been much increased, and the classes re-subdivided as in the Exhibition of 1897. A number of changes have been made on the grounds, which will be conducive to the conveniences of the public. The main entrance has been changed to within easy distance of the cars. An exit will be provided so that the public may leave the grounds direct from the grand stand after the performance afternoon and evening thus avoiding the congestion and crowding of previous years. The grounds have been laid out in cinder walks leading to all buildings. In view of the large exhibit of poultry last year, the commission have felt the necessity of a new building, which is now in course of construction. It will embody the best modern ideas, and be provided with the very best appliances and facilities for a large display of poultry. The building will contain over two hundred and fifty coops, and will also have accommodations for the display of canaries, parrots and pet stock. By means of a monitor roof lots of light is afforded with no dr.fts.

The Special Attractions will be well up to their usual standard of excellence. Contracts have already been closed with a number of the specialties, including Balloon Ascensions every day, and the appearance of the Guided Pacer "Tommy" who is turned loose on the track, and paces a mile in 2.07 without a driver.

As a big wind up and culmination to the evening entertainment, arrangements have been completed for a grand display of Actual British Warfare by over two hundred soldiers from the Garrison representing the Storming of Peiwar Kotal an Arghan Stronghold on Lord Robert's famous march from Kabul to Kandahar. The production will be something entirely new, and such as could be put on in no other city in Canada. It will be under the supervision of General Lord Seymour, Admiral Bedford and Officers in command of the Garrison at Halifax, and under the immediate direction of Sergeant Major

McLEOD

DEFENDER

Receives Another Trial in a Stiff Wind

SHE FAIRLY FLEW.

Skipper Not Satisfied With Her Action, Will Make Alterations.

TORONTO, July 15.—Under a single reef with Commodore Jarvis at the helm, the McLeod candidate for honor of defending the Canada cup started out for another trial spin in the stiff wind of yesterday afternoon. She ran down to the Queen's wharf in good style, and fairly flew back, leaning well over her boom at times touching the water. On returning to her mooring, off the yacht club, another reef was taken in her jib stowed, and a storm jib blown out in its place. Again she started, but her skipper was evidently not satisfied with her sails, for after a few short tacks she tied up to her mooring again, where her mainsail was taken off entirely. During these manoeuvres the Canada, last year's cup winner, hovered around evidently looking for a trial speed with the new boat.

Her Papa, Not Yet.

A bright-eyed little girl sat on an uptown car the other evening. She was accompanied by a young woman, evidently her mother, and by an extremely attentive young man.

The car was crowded, and the young man held the child on his devoted knee. She waved her arms about aimlessly, and as the car stopped with a jerk she knocked the young man's hat into the lap of a woman in the seat behind. The woman handed it back.

"Take care, little one," she said playfully. "You'll spoil papa's hat."

The child looked up and answered in a shrill piercing voice that nobody in the car could pretend not to hear.

"He ain't my papa," she said, "but he's going to be."

Long, the military instructor. Many of the men taking part actually fought at the engagement in question. The war with the Afghans is still fresh in the minds of many, and every loyal British subject will be intensely interested in this grand display of military manoeuvres interspersed with amusing incidents of Camp Life. Withal, there will be fireworks galore. A full programme every evening of magnificent effects.

Hard-working Farmers.

Long hours of hard, never-ending work makes Kidney Trouble a common complaint on the farm. Painful, weak or lame backs and Urinary Disorders are too frequent.

DOAN'S KIDNEY PILLS

help a farmer to work and keep his health—take the ache and pain out of his back and give him strength and vigor.

Mr. Isaiah Willmot, a retired farmer living at 138 Elizabeth St., Barrie, Ont., said:

"I have been a sufferer with kidney trouble and pain in the small of my back, and in both sides. I also had a great deal of neuralgia pain in my temples, and was subject to dizzy spells. I felt tired and worn out most of the time.

"Since taking Doan's Kidney Pills, I have had no pain either in my back or sides. They have removed the neuralgia pain from my head, also the tired feeling.

"I feel at least ten years younger and can only say that Doan's Kidney Pills are the most remarkable kidney cure, and in addition are the best tonic I ever took."

LAXATIVE PILLS cure Constipation.

And only one thing in all the car was redder than the mother's cheeks, and that one thing was the back of the young man's neck.

KNAPP'S ROLLER BOAT.

A Montreal Engineer Plans Improvements Which May Make the Boat a Success.

BOWMANVILLE, July 14.—Mr. Chas. E. Robertson, consulting of Montreal, has been inspecting the Knapp roller boat at Manna's Point, and finds that the damage done is very slight, but owing to the changeableness of the weather it is necessary to get heavier outfit to facilitate rolling of the boat. He has been twice in a position to roll her off, but owing to a change of the wind had to desist. He has therefore sent for heavier plumping appliances and will roll her off this week. It is Mr. Knapp's intention to take her to Prescott, where she will be re-modelled according to recent designs, and used for experimental purposes. With one set of her present engines, and boilers on the new principle of power applied she will attain—Mr. Robertson states—at least a speed of 15 miles an hour.

The remodeling will consist of a shortening of the boat from 110 feet to 94 feet, and placing the engine right in the centre. This will prevent the absolute possibility of the fire being put out by the water coming in at the ends, as at present constructed.

The engine will be compounded and directly connected to the cylinder by means of spur gearing, doing away with the power of gravity by which the boat is driven at present. On the outside skin floats are placed the whole length of the ship 4-1/2 inches deep, thus strengthening the outside shell as well as giving a larger propelling surface. The new steering gear will be of a remodelled construction, worked by hand wheel at either end. Sundry other minor changes are to be made which will materially affect the manipulation of the boat, which we cannot minutely describe at present. These have been seen and thought over during this experienced cruise, and Mr. Robertson is confident that the new designs will work to the satisfaction of all concerned.

TROUT IN JELLY.

This is an ideal supper dish in which other fish may be used in place of trout. Make a ring of the fish by securing the tail in the mouth. Prepare a seasoned water in which to boil the fish—water flavored with vinegar and salt, clove or garlic. It must be cold when the fish is placed in it, and be gently boiled to avoid breaking or mashing the fish. When done lift out and drain. Baste with fish jelly, coat with coat as each hardens, arrange neatly and serve.

A skilled navigator knows that his chart, compass and sextant will guide him with unerring certainty across ten thousand miles of tempest-driven ocean straight to one little speck of an island on the almost boundless waters. With the same unflinching assurance a skilled and scientific physician seeks for some undiscovered remedy in the wide ocean of materia medica.

He knows that when the nature of a disease is once thoroughly understood he has located the latitude and longitude of the remedy; and its ultimate discovery is only a matter of time. It was in this way that Dr. R. V. Pierce, of Buffalo, N. Y., was guided to his world-famous "Golden Medical Discovery" for the cure of consumption.

He realized that consumption is a constitutional malady, deep-seated in the blood. He sought and found this marvelous constitutional remedy which renovates and enriches the vital current with nutritious life-giving elements; healing wasted tissues, restoring digestive and assimilative power, and building up healthy flesh and genuine enduring vigor.

In all those debilitating diseases which are caused by imperfect nutrition; this extraordinary "Discovery" is the most perfect alternative remedy and strength-builder known to medical science. It is not a mere temporary stimulant like various malt "extracts." Its good effects are permanent.

When constiveness is among the prevailing symptoms, Dr. Pierce's Pleasant Pellets should be used in conjunction with the "Discovery."

"Dr. Pierce, I am one of your most grateful patients," writes Mrs. Annie M. Norman, of Equinunk, Wayne Co., Pa. "I have taken 'Golden Medical Discovery,' also 'Favorite Prescription' and 'Pellets' with wonderful results. I am, as many of my friends tell me, like the dead brought to life. The doctors said I had consumption and death was only a matter of time. That was six years ago. I concluded to try your medicine. I continued until I had taken nine bottles of 'Discovery' and several bottles of 'Pellets.' I got well and have done a great deal of hard work since."

ARRIVES IN

HALIFAX

Louis Rubenstein The Ex-Skating Champion

HAS FORSAKEN THE ICE

And Betaken Himself To The Wheel. He Is Booming The World's Meet.

HALIFAX, July 17.—Louis Rubenstein, president of the Canadian Wheelman's association, and champion amateur figure skater of the world, was in Halifax yesterday on a flying trip in connection with the world's cycle meet at Montreal in August, and also C.W.A. matters generally. Mr. Rubenstein has been putting out some attractive lithographs and cards, advertising the meet, which promises to be a huge success. This race meet was secured for Canada by the C.W.A. at the annual meeting of the International Cyclists' Union at Vienna last year in competition with eighteen other countries and the efforts of Mr. Rubenstein and indeed all Canadian wheelmen are being directed to making the gathering a credit to this country. That the contests will be the best ever before held is now acknowledged. Already there are two competitors at work training in Montreal from Cape of Good Hope. Others will arrive in a few days from England, Scotland, Ireland, France, Germany and other European countries also from Australia and the United States. Queen's Park track, Montreal, where the races take place in one-third mile in circumference and is now the best board track in America. Motor cycles will be used for the pacing the professional races, one of the most important of these being the 100 kilometres, 62 1/2 miles. Parties are being organized in all the principal cities and towns of the maritime provinces to attend the meet and it is likely that quite a number will go from Halifax. The Intercolonial is giving a single fare from all points on its line.

With regard to C.W.A. matters in general, Mr. Rubenstein is endeavoring to stimulate a keener interest in this part of the country. He saw a few leading wheelmen yesterday and it is probable that a move will be set on foot in a few days to organize more actively in this district. Mr. Rubenstein would liked to have stayed here a few days in this connection, but as he is a business man he is obliged to return to Montreal without delay to look after his interests. He drove through Point Pleasant park yesterday and says the roads there are the best for bicycle has ever seen.

STUDY OF GRASSHOPPERS.

Macoun Goes to Sable Island to Learn of its Animal and Vegetable Life.

Professor Macoun, of Ottawa, chief of the Canadian Natural History department, is in the city. He intends going to Sable Island next Monday to study the animal and vegetable life on "the graveyard of the Atlantic." He will spend a month there. Some years ago there was an invasion of locusts at Sable Island. Probably the insects found their way there in imported hay. In 1894 they were thick, but by 1895 the locusts increased to a veritable plague. The following year, however, they became less, and year by year have diminished. The cause of this gradual disappearance was a parasite that attacked the grasshopper and has been killing it off. Professor Macoun will have something interesting to say on the subject when he comes back, as well as on animal and vegetable life more indigenous to the Island. Yesterday he obtained a lot of interesting samples from the bottom of the outer automatic buoy, and its mooring chain.

CHRISTIAN

SCIENTISTS

Do Not Believe There Is Any Such Thing As

CONTAGIOUS DISEASES

Their Complete Faith In The Ability Of The Practitioner To Heal.

CHICAGO, July 18.—Christian Scientists, in this city at least, do not believe there is any such thing as contagion, since they hold that there is no such thing as disease.

They further express their complete faith in the ability of a faith practitioner to heal any child supposed by ordinary persons to have diphtheria or other contagious diseases, and to make other children immune.

This point was made plain in connection with the recent death of a child of Mrs. True, of No. 912 West Adams street from diphtheria, but in the opinion of faith curists the child had nothing of the kind. Naturally they are anxious to furnish an explanation for the death.

At a meeting on Monday one member said she lived near Mrs. True. In her opinion Mrs. True was a Millerite, and not a Christian Scientist.

This was why the child died.

Two business men who are Christian Scientists were asked about the matter of contagion.

They said little beyond stating that Christian Scientists would respect popular prejudice by conforming to the prevailing custom of keeping children who are understood to be ill from a so-called contagious disease out of the public schools.

One of these was asked: "Would you fear bad consequences should one having diphtheria come among your children?"

His reply was: "No; I should have no fear. My wife is a healer, and she would not permit any harm to come to our children nor to any other children over whom she might choose to throw her influence."
