Sold Cows For Marks, And Goat Ate Them Up

BRESLAU, April 20.—The farmer who killed the goose that laid the golden eggs can hardly be chronicled among the great unfortunates of the world, especially when the genuine hard luck of a farmer and his wife in Silesia is considered.

The net losses of this pair consist of two cows, their dearest possessions; 250,000 marks in cash, which was all the money they owned and, as a last straw their goat. It was the goat that ate the marks from the sale of the cow that wrecked the family fortunes.

Pressed for cash, the farmer and his wife sold their two cows, and the woman was charged with hiding it instead of putting it in the bank. She finally decided upon the stable, and lifting a stone, placed the money, wrapped in a woolen stocking, beneath it. That night when the goat was turned into the stall it browsed about for strange edibles and found the marks.

In the morning the farmer's wife saw bits of her precious marks scattered about the stall, while the goat complacently chewed other remnants of the notes.

Risked Life In Vain, Youth Now Deported

DETROIT, Mich., April 20.—Although Leo Castle, 18, risked his life to enter the United States, and scores of sympathetic women throughout the country attempted to stay deportation proceedings against him, he was returned to Canada to-day by Detroit immigration officials.

The boy's love for this country prompted him, he said, to walk across a narrow bridge 150 feet over Niagara Rapids. In this way he came to Buffalo a month ago. Following the publicity his feat won for him, immigration authorities at Buffalo declared their intention of sending him back to Canada. He disappeared, and official Washington was flooded with protests against such action.

Ten days ago he was deported in Adrian, Mich., and the Government again took steps to deport him. A warrant was received from Washington, Castle was brought to Detroit, and to-day Detroit inspectors accompanied him to Windsor.

The boy smiled when told an effort might be made on the Canadian side to send him all the way to Ireland, where he was born. "They can't," he said, "I'm going up to Edmonton, Alberta, to my foster mother. Her name is Mrs. Georgina Nedau, and she's an American citizen. She's my legal guardian. When I tell her I want to get into the United States I'll come back flying and nobody can stop us."

A CHEERY KITCHEN

A colorful kitchen is a bright, cheerful place in which to enjoy a simple breakfast when the house keeper employs no assistant, and when a reach of the arm or a step to the oven will produce sizzling hot food daintily served amid pleasant surroundings.

To make the kitchen attractive, the walls should be the first consideration. Painted walls are ideal for kitchen use, especially when they are painted with a paint that can be washed. If water-tones are preferred, they can easily and inexpensively be renewed each year. Stenciled borders are little to be reckoned with, as they are never really effective and detract from the dignity of a figured curtain material. In the case of a very high waicoting, a wall-paper can occasionally be very effectively used; but must be covered with one or two coats of shellac.

The woodwork of the kitchen may be painted or enameled in plain white or cream to match in tone the painted kitchen furniture. Often when the furnishing and walls are neutral the woodwork can become the vivid color note of the room.

Kitchen floors may be either plain painted (several shades darker than the walls), linoleum-covered in plain or tiled patterns, or cemented, depending on the effect to be desired. Cementing is becoming increasingly popular, as it may be colored in the mixing or laid in two-tone block effect.

WANT DUTY ON TEA CUT

LONDON, April 20.—National Liberals are responsible for the tabling of amendments of the budget resolutions which call for a reduction of the tea duty from eight pence to four pence per pound and the income tax by a shilling instead of sixpence.

Executors' Notice

The undersigned executors of the last will and testament of John Larter, late of Charlottetown in Queen's County Prince Edward Island, Contractor, deceased, hereby notify all persons indebted to the estate of the said deceased to make immediate payment to them at the office of Mackinnon & McNeill Solicitors, 96 Great George Street, Charlottetown; and all persons having any claims against the said estate are hereby required to present the same, duly attested, at the office aforesaid within twelve months from this date.

Dated this 20th day of April, A.D. 1923.

M. F. WOLLERING CITES MOTOR CAR ESSENTIALS THAT WIN PUBLIC FAVOR

Mr. M. F. Wollering, Studebaker Vice-President Tells Value of "Keeping Ear Close to Ground"—No Substitutes for Quality, He Says.

Business leaders in a position to know have predicted that 1923 will be the greatest year the automobile industry has ever witnessed, from the standpoint of production and sales of cars. In my opinion, this will be due not only to favorable business conditions in the country, but also to a greater appreciation of the indispensable service of the automobile, and even more particularly, perhaps, to the fact that better motor cars are obtainable today than ever before, and at lower prices considering their quality and completeness.

Despite the unprecedented demand which is being foretold for 1923, I believe buyers are going to be just as critical as usual, if not more so, weighing values carefully, considering where they get the most for the amount of money they wish to invest, and choosing their cars accordingly.

With the public in such a frame of mind, and with future years to consider, manufacturers can't afford to become careless. Every man in our factory organization has been impressed with this fact. With our production being stepped up considerably to meet the 1923 demand, we are adhering absolutely and faithfully to standards which permit only the highest quality materials and workmanship in our product.

The manufacturing and engineering departments of a motor car manufacturing institution are far more important today than in former years. They have to be more flexible. Their functions used to begin and end with getting cars designed and built. Today, their task is to design and build the kind of cars the public wants—cars that will increase public demand. With the competitive conditions that exist in the automobile industry, engineering and production heads can not afford to keep themselves aloof. They must work closely with the sales departments—the distributing organizations—which are in touch with the public's viewpoint. This does not mean catering to every popular whim. Experience supplemented almost invariably with laboratory tests, must determine whether a certain new idea is better than the one being used. The test is usually this: Does it increase genuine motoring satisfaction?

Our famous laboratories have been of incalculable worth to us. They have helped us to decide the things to do as well as what not to do. They enable us to tell whether a new idea or feature is destined to be a short-lived fad or a thing of permanency. It has to prove itself a step in advance before it is adopted. It has to make good under the most grueling tests known. Many pioneering achievements relating to raw materials, specifications, features of design, items of equipment, etc. have originated in these laboratories.

The manufacturing and engineering departments of a large automobile manufacturer have a greater obligation than in a relatively smaller concern. More is at stake. There is the relatively greater reputation to protect.

Experience also counts for much. Studebaker's record of building products of highest quality for seventy-one years is always an inspiration to us—the greatest asset we have, the greatest stimulus toward even better achievement. This experience has taught us that public patronage is the logical reward for setting, and adhering faithfully to, lofty standards.

People may not be impressed equally by the same features in choosing a car, but whether they realize it or not, the foundation of the glass way is not real human handiwork is quality, for which there is no substitute. Our theory is that to hold a leading and enduring place in the industry our cars must possess the kind of quality that evidences itself on the surface and below, in small details and large, in both workmanship and materials. Such quality, coupled with skilled design, begets a superior kind of performance and when combined with manufacturing economies, which are possible in large-scale manufacture, it means greater intrinsic values.

Name any motor car attribute admitted by owners—endurance, economy of operation, comfort, appearance, appointments, power, smoothness, quietness, flexibility—and it will be found that these are in direct proportion to the quality that a car possesses. Experts have long known this. The public is appreciating it more and more every day.

Don't fail to call and look over the new Studebaker Models now being shown by us. Our salesmen will be pleased to see you and explain the new features for 1923.

VALUABLE HINTS ON COOKING

A simple method of measuring milk for omelets is to fill one-half the empty shell, which makes a convenient and reliable measure.

To keep peeled apples from turning brown while standing, cover them with salt water.

To spread frosting smoothly, dip a knife in hot water and the icing will spread on the cake without sticking to the knife.

When desiring to bake a small quantity of potatoes, place an asbestos ring over one of the burners on the top of the range, cover with a deep pan and you have a miniature oven. In this you can bake at least half a dozen potatoes with a great saving of gas.

FOUR CHILDREN AT A BIRTH

SASKATOON, April 20.—The wife of D. W. Fehr, a farmer in Hague, Sask., district yesterday gave birth to quadruplets, girls. The four infants lived only four hours.

"The many friends of Messrs. Albert and William, Llewellyn and Jack Collins, of Sturgeon, heard with regret of their recent departure for Bangor, Maine. The good wishes of their many friends of Sturgeon and vicinity follow them; and it is hoped they will meet with success during their sojourn in the "Pine Tree State."

A BECOMING WAY TO WEAR YOUR HAIR

A description of a way of wearing the hair which is becoming to the majority follows: It is parted either in the middle or on the side. If you part it on the side, pin the front hair on the back of the head in three sections, two being made on the side on which it is not parted, inasmuch as there is double the amount of hair there. Then make a section of the back hair and pin it also on the back of the head. With this fourfold coil make a knot of any formation you wish on the crown of your head. If dressing for an evening, pin it higher and wear with a fancy comb or band if desired.

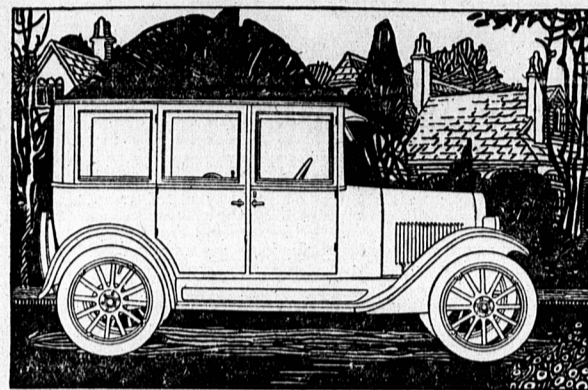

WIGS OF GLASS

Wigs made of spun glass, are found by recent experiment to be the best substitutes for human hair. The material is extraordinarily light and the texture fine and silky. Curls and waves in any shade and in any style to suit the fashion of the moment are easy to produce. So perfect is the imitation that only a very close inspector shows that the glass way is not real human handiwork.

Chevrolet—the World's Most Economical Car to Operate

Chevrolet is not only the world's lowest priced, fully equipped, quality automobile, but it also costs less to operate than any car built. It delivers the most economical transportation available in motoring.

In actual figures Chevrolet costs less per mile in consumption of gasoline, oil, tires and in general upkeep and maintenance. price! 67 distinct improvements have made it even better than the car that startled the world in 1922.

5-Passenger Sedan \$1125 f.o.b. Oshawa

Only great engineering, research, manufacturing and financing capacities made available by the greatest automotive enterprise in the world—the General Motors Corporation—could make possible so fine, complete and advanced an automobile as Chevrolet at so low a price.

Empire Fair To Cost Canada \$1,000,000

OTTAWA, April 20.—All the plans for Canada's participation in the British Empire Exhibition to be held in London, England, from May 20 to October 31, next year, are completed. The Dominion Government, it is announced, will erect its own building on a commanding site in Wembley Park, London. Work on the erection of the building is to commence this summer, and will be entirely completed before the exhibition opened to the public on April 20, 1924.

The building will be 415 feet long and 300 feet wide and in it the resources and products of each of the nine provinces and the two territories will be displayed. The Canadian exhibit is to be financed, controlled and directed by the Federal Government. The estimated cost is \$1,000,000.

On the same site as the Canadian Government building will be two additional separate buildings to be built by the Canadian National Railway and the Canadian Pacific Railway, each approximately 10,000 feet. Plans for all three buildings have been approved by both the Dominion Government and the official architects for the exhibition. When completed these structures will be located as to be readily seen from any part of the grounds set apart for the exhibition.

Every part of the British Empire will be represented at this great exhibition.

TOURISTS POURING IN FOR ROYAL WEDDING

LONDON, April 20.—Legions of American and Canadian sight-seers are descending upon London to catch a glimpse of royal splendor and matrimony.

The wedding of the Duke of York to Lady Elizabeth Bowes-Lyon, scheduled for April 26, is the object of their curiosity, and is increasing number leading from every boat from New York today caused one newspaper to remark:

"It is the typical democratic love of the aristocracy."

With these new arrivals and the assembling of preparations for the marriage ceremony, London itself is preparing to take on a carnival appearance.

Lady Nancy Astor, always distinctive, sent to Lady Blyth, one of those curious little articles of furniture, peculiar to Europe called a "whatnot." It is an arrangement of mahogany shelves which would stand in the best parlor of a main street home and contain all the trinkets and playthings of the household.

Wilson's Story May Be True

LOS ANGELES, Calif., April 20.—The statement of Herbert Wilson, former evangelist, alleged mail robber, and convicted murderer, that he provided the explosive for the bomb explosion in Wall Street, New York City September 16, 1920, may be true, according to a report of the Bureau of Investigation of the Department of Justice, declared today after a conference with Wilson.

"Wilson tells a straightforward and logical story," Burns said. "While it is true that the Department of Justice has closed the investigation in the Wall Street bombing, having learned that the parties responsible for it are now in Russia, Wilson's story could well fit in with the facts as we already know them. We will start immediately checking up the details as he gave them to us. If our investigation proves Wilson's statements to be true, and I know of no reason why it should not, we will know the source of the explosive that went into the bomb."

Burns, who came from Florida to interview Wilson, declined to make known any of the information Wilson gave him. Before going into the conference, which lasted more than an hour, Burns expressed the opinion that Wilson was "talking for his own benefit." After the interview, Burns said he had changed that opinion and believed Wilson was sincere in telling his story and not making the statements to gain favors.

Rescue By Airplane

ST. JOHNS, N. F., April 20.—Marooned in a field of ice off the Newfoundland coast where the steamer Kyle is frozen fast, four political candidates for the spring election are planning for a rescue by airplane so they can file their candidacy by next Monday, the last day for this legal formality. Candidates for both the Government party and the Opposition from the districts of Burgeo and Fortune boarded the Kyle more than a week ago intending to file in their own district. The steamer, which carried supplies for the starving settlements along the south coast, became stuck in the ice field at Lamalline Harbor. She has not been able to move since. With election day set for May, and with six weeks required to carry out a thorough campaign along the sparsely settled shore, candidates of both parties aboard

MICHIGAN DOCTORS PUZZLED BY GIRL

GRAND RAPIDS, Mich., April 19.—Local physicians are puzzled over the case of a girl who is reported to have eaten virtually nothing for more than two years.

The girl is Miss Etta Blanchard, 26, of 408 Carrier street, subsists only on weak tea and mild beverages, her mother insists. The case promises to be one of the strangest recorded here. Miss Blanchard apparently has survived her unusual malady, specialists say.

The girl, who has been unable to leave her room where she is confined to bed, is under the constant care of the mother, Mrs. Alma Blanchard, a widow and an experienced nurse.

Mrs. Blanchard declines to add to statements of doctors regarding the peculiar case. She admitted her daughter had been unable to partake of any solid foods, but said she did not wish to divulge particulars.

Chicago specialists, who by operations in that city sought to discover cause of pains in the abdomen, of which the girl complained, and skilled physicians at the

SEEDING GENERAL IN SOUTH ALBERTA

WINNIPEG, April 20.—Seeding of wheat will be general throughout South and while no seeding had been done in Alberta this week, according to a preliminary crop report Wednesday issued here today by the Agriculture Department of the Canadian Pacific Railway. The report shows that seeding started at Walsh Thursday, and seeding was expected to be general today with the land in perfect shape.

In Epik, N., about 20 per cent of the farmers were on the land, while no seeding had been done in Alberta this week, while several operations in that city sought to discover cause of pains in the abdomen, of which the girl complained, and skilled physicians at the
