Extra Years of Easy Riding

IMAGINE an engineer daring to design a bridge with only enough strength to bear the strain of traffic! Instead of that, he provides for a liberal surplus. This "factor of safety" means long life to the structure in spite of hardest usage. This principle is applied in

C.C.M. Bicycles

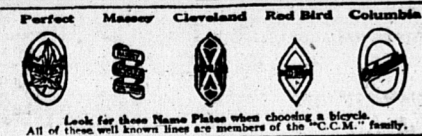

C.C.M. frames are practically wreck-proof. Not only are the frames made of the highest grade of steel tubing obtainable, but our "fishmouth" reinforcement provides more than enough "factor of safety." Extra plates fortifying the inside of the joints against strain make the frame practically unbreakable.

All bright parts are coated first with copper—and copper can't rust—then they are heavily nickelled. C.C.M. bicycles look like aristocrats long after rust has made ordinary wheels fit for the scrap heap.

Such typical C.C.M. endurance advantages mean extra years of service and prevent the accurate C.C.M. running parts getting "out of true." Thus your C.C.M. bicycle can be depended upon to run smoothly year in and year out.

All C.C.M.'s have the famous Hercules Coaster Brake—the brake without the side arm. It is sensitive, dependable and effective always.

C.C.M.'s share by comparison in any company on earth. There is a C.C.M. dealer near by. See him.

Look for these Name Plates when choosing a bicycle. All of these well known lines are members of the "C.C.M." family.

90% of the parts of every C.C.M. Bicycle are made in Canada and each machine is fully guaranteed by
