### SANDINO STILL CHIEF MENACE

MANAGUA, Nicaragua, July 24 (U.P.)—Dr. Enoch Aguado, vice president of Nicaragua, views Sandinism still as his country's major problem, despite the fact that the capital of the country lies in waste as a result of the earthquake last March.

Dr. Aguado believes that the rebuilding of the city will come as a matter of course, and while not attempting to minimize the horrors of the quake, or the devastation wrought by it, he is of the opinion that the chief concern of the government is the necessity for wiping out the banditry in the north as quickly as possible.

"We must increase the size of the Guardia Nacional," he said, "until it is sufficiently strong to maintain a definite and constant initiative in its campaign against Sandino. Once the menace of banditry is removed and the country is freed from the depredations of these outlaws, we can readily disband a large part of the Guardia, releasing these men for more productive pursuits."

Dr. Aguado sees an encouraging note in the defeat of the Ferrera forces that had been in revolt in the neighboring republic of Honduras, and in the death of General Ferrera. He believes its effect in Nicaragua will be a healthy one.

### YOUTHFUL CLUB LIFE POPULAR

NEW YORK, July 24 (U.P.)—Club life among boys and girls here has been put under the microscope by the Research Bureau of the Welfare Council and has been found little different from club life among the older generation.

The Council's report of a study of clubs in 48 settlements and neighborhood houses shows briefly: that girls are greater club joiners than boys; that it is not always easy to secure admittance even to a boy's or girl's club, because in most of them the proposed member must be acceptable to all, or a majority of club members; that it is not easy to remain in a club once you have gotten in, because your dues of three cents to 25 cents a week must be paid regularly and long lists of rules must be observed under penalty of fine or expulsion; that social and athletic activities are most popular and religious or instructive activities least popular.

The Welfare Council found some 1,700 clubs, with close to 30,000 members, among the settlements. Jewish, Italian and Irish boys and girls predominate but almost every other nationality on earth is represented, many of them in the same club. The only considerable group of the city's population not included in club memberships, the report says, are Negroes, "whose needs for recreational and social opportunities are certainly as great as, or greater than, those of any group."

The study of clubs was conducted by Louise P. Blackham and Kathryn Farra of the Research Bureau of the Council.

## WELCOME FOR EPISCOPALIANS

General Convention Will Meet There in September

DENVER, July 24 (U.P.)—The kind of old-fashioned western welcome with a "grubstake" of every service and convenience it has to offer, will be made voluntarily to delegates to the General Convention of the Episcopal Church here in September.

Denver will tell the churchmen, "you're up a mile, so smile." To begin with, the city has placed the municipal auditorium at the disposal of the Episcopalians.

### Auditorium to be Church

This building, scene of the gatherings of many national and international conventions, literally will be turned into a church. A specially constructed altar and altar rail will be installed, around which the white-robed dignitaries may gather with all the solemnity of their custom.

Not to be outdone by the city, the state has offered liberal use of its capitol buildings to the House of Bishops for their conferences upon questions of social and moral import.

The federal government insists upon having a part in the extravaganza of western hospitality.

### Branch Post Office

A branch post office in the Scottish Rite Temple, offered as another meeting place by the Masonic fraternal order, will be opened during the busy days of the convention.

All of the leading hotels are contributing courtesy services. The city's four radio stations will give daily periods for remarks of the noted speakers.

Business will cooperate in an elaborate decorative scheme. Clubs will provide guests cards and golf privileges for the distinguished guests.

To top it off, the churches of every denomination will issue special invitations to address their congregations during the conference.

### HOW CHEMISTRY HAS HELPED THE CANADIAN FARMER

For a period of more than forty years the Division of Chemistry of the Dominion Experimental Farm System has been in close contact with the Canadian farmer. This has been brought about by the issue of reports and bulletins, by lectures and addresses, personal interviews and to a still greater degree by a voluminous and ever increasing correspondence.

The information so disseminated is largely the result of investigation and research which are based upon the application of the science of chemistry to practical agriculture, and these constitute the main work of the Division.

A large number of soil samples are received for examination from farmers scattered throughout the Dominion. In the report of analysis to the sender, advice is given with respect to manures, soil amendments and suitable fertilizers, etc. In this way alone hundreds of farmers every year are directly benefiting from this service of the Division. From the results of carefully planned investigations the influence of continuous grain growing has been determined and econom-

ic methods of maintaining the fertility of western prairie soils have been indicated. The extensive use of alfalfa and clover in present day crop rotations is largely due to the early work of the Division in which the manurial value of these legumes was demonstrated.

Recent years have witnessed an increasing use of fertilizers especially in Eastern Canada. Extremely valuable information with respect to the economic employment of fertilizers and liming materials has resulted from the investigation work carried on by the Division on the Several Branch Farms and Stations.

Another important phase of the work has been the establishing of standards for the more important feeding stuffs. Some years ago, there was wide spread dissatisfaction over the variable quality of milling by products. Many were loaded with screenings with consequently poorer feeding value; injurious weed seeds were frequently present, and middlings with a low fibre content, so necessary in pig feeding were difficult to obtain. Standards for bran, shorts, middlings and feed flour were set, regulations regarding adulterations by screenings passed and as a result there is on the market today standardized clean, high grade wheat by products. Similar work was done for packing house by-products, resulting in the vending of properly labelled material with guaranteed content of protein, fat and bone phosphate.

In the chemistry of wheat it has been shown that seasonal conditions precipitation, temperature, etc., have a greater influence on the quantity and quality of the gluten than does soil fertility. The valuation of newly introduced varieties has been another phase of the work. For instance, some years ago an effort was made by interested parties to distribute in the West a variety of wheat to replace Marquis and other standard varieties. Yields, appearance, and even percentage of protein of this variety were satisfactory. Gluten determinations, however, showed this wheat to possess a soft, sticky, non-resilient gluten, markedly inferior to that of such older varieties as Fife and Marquis. In consequence, the distribution of this variety was discouraged.

Grain mixtures grown to produce high protein yields have been under investigation. As a result certain mixtures have been found which almost double the amount of protein per unit area formerly obtained.

The critical examination of a recently introduced scheme of pastureage calls for special comment. This system involving close grazing, accompanied by judicious fertilizer treatment has produced a herbage, rich in protein, during the entire growing season and has resulted, in some districts, in saving the purchase price of commercial feeds, during the summer.

Free analysis of well waters has contributed towards the maintenance of hygienic conditions through the farming districts. Thousands of samples of well water have been analyzed, pollution, alkalinity, etc. detected and remedies suggested.

At one time the export trade in pork to Great Britain was seriously affected by extreme softness of the product. Investigation of this problem proved that the chief factors leading to softness in pork were the stage of maturity of the animals and the character of the feed—skim milk in the ration possessing a correcting influence in

### Gold Stripe "Adjustables" The New Silk Stockings

Made in Canada

They fit every length of leg as if custom made to special order!  
Wonderfully comfortable! No binding, wrinkling, or twisting at the top.  
Now you can safely fasten your back garter on the reinforced seam, and keep your seams straight and neat.
