**A Sweetheart at Thirty**  
THE STORY OF A WOMAN'S TRANSFORMATION  
By Marion Rubincam

SOMETHING TROUBLES ME  
Chapter 41

It was really a most remarkable evening. It was not the novelty of the surroundings, Violet and I had frequently taken dinner at the little Village restaurant, we knew them very well by now—we even knew some of their regular patrons.

For that part of New York as everyone knows is indeed a village, with all the sociabilities and drawbacks of the country village. Each restaurant had its regular circle of diners who came night after night and sat about over the coffee and cigarettes, talking news, art, new music, politics, socialism, syndicalism, communism, single tax and many other things all of them quite over our poor heads.

The girls often wore their hair short in a way that fascinated Violet, and the men always wore tortoiseshell rimmed glasses. They had the easy familiarity that goes with the small town, too; they came to our table and introduced themselves, and most of them tried hard to know Violet. Of course we knew everyone who came to Helen's.

So it was not the places that made the evening remarkable. It was the man, this new friend of Bud's, Francis Meade. He was a stock broker, one of two members of a fairly large firm on Wall St. He was fine looking—yet not handsome, for his features were far from perfect. He was perhaps 40, his hair had quite a little gray in it, he had a stern looking profile but the nicest and most humorous full face. He had a stubborn jaw, but a soft sweet looking smile—a smile that transformed his whole face. Later in the evening, his partner, John Judson joined us, and finally we all went over to our own little flat, where Violet and I made coffee and the two men and the boy sat and smoked and talked.

Mr. Meade seemed especially attracted to Violet and the girl blossomed out delightfully with him, chattering about her impressions of the city when she first came to it. She even told some of our first funny adventures, though I blushed a little and felt somewhat ill at ease.

"Aunt Enid and I used to go for a walk and write down the names of all the new streets we came to, and what they looked like. Then we came back the same way following our directions so we wouldn't be lost. Aunt Enid used to be awfully afraid to ask her way of a policeman."

"She had a bad conscience maybe," suggested one of the men.

"Maybe, but I don't think so," Violet smiled. "She was just afraid because they were strange men and she hadn't been properly introduced to them. We never crossed a street alone because of the cars."

"Taking care of oneself in a traffic jam is a matter of instinct. Perhaps your aunt hadn't the city instinct," Mr. Judson suggested.

"I think she had the home-making instinct, however," Mr. Meade said by way of answer getting up and walking about the room. I haven't been in a place for years that made me feel so thoroughly at home. This place is so quiet and refreshing."

He turned with that delightful smile of his. Something warm and kind ran through me, though every vein in my body and made me feel strange and delightful.

It was my first companion—the first bit of gallantry from a man since the days so long ago when Mark paid awkward little compliments.

I wanted to say something in return—but I couldn't. I knew well enough what it was—I wanted to say—

"Then please come and be at home here often if you like it."

But some curious awkwardness clutched at me, I could not get the words out. It was Violet who rescued the situation by turning and saying with all the natural grace she possessed, "I don't know. Then I hope we'll see you again some time."

After the men had gone with Bud to guide them out of the village—since all the streets were new to them—I sat for a long time thinking over the evening. Violet being young and healthy and full of life, went to bed and promptly fell asleep. But I could not this evening.

Why had I not been able to say the things I wanted? I never was at a loss for words at home. I was always a rather silent person that is, when I was with a hard-boiled, but conversational, she suppressed me by her own weight, her sheer physical bulk, as well as by the force of her character.

But I was free of Esther now, free until we returned to Henly Falls for the summer vacation. It was that able, suddenly in my opinion, and because she fairly sat upon me conversationally. She was too quiet too courteous, too genteel in personality for that. What a remarkable man he was! He was the first I ever met that really impressed me. Suddenly I became conscious of my own vast ignorance.

Had I something else to learn now!

To-morrow—We Go Home.

**SUCH PAINS AS THIS WOMAN HAD**

Two Months could not turn in Bed  
Lydia E. Pinkham's Vegetable Compound Finally Restored Health.

Seattle, Washington.—"I had dragging pains first and could not stand on my feet, then I had chills and fever and such pains in my right side and a hard lump there. I could not turn myself in bed and could not sleep. I was this way for over two months, trying everything anyone told me, until my sister brought me a bottle of Lydia E. Pinkham's Vegetable Compound. I took it regularly until all the hard pains had left me and I was able to be up and to do my work again. The hard lump left my side and I feel splendid in all ways. I know of many women it has helped."—Mrs. G. RICHARDSON, 4640 Orcas St., Seattle, Wash.

This is another case where Lydia E. Pinkham's Vegetable Compound brought results after "trying everything anyone told me" had failed.

If you are suffering from pain, nervousness and are always tired; if you are low spirited and good for nothing, take Lydia E. Pinkham's Vegetable Compound.

**Bred to Lay**

S. C. W. Leghorns, Cockerels and pullets. Bargain in breeding herd. Will also sell my pen in egg laying contest.

EVERETT HOWATT,  
Cape Traverse R. R.  
8035-20-41.

**Live Fowl**

Special prices during next ten days for live fowl over 4 1/2 lbs. Call your flocks now and get the highest price.

THE HARRIS ABATTOIR CO.  
8038-20-1 week.

**Talking Movie Appears At Last**

BERLIN, Sept. 20.—Photographed sound, the talking movie had its first presentation at the New Alhambra Theatre here today. Everybody of consequence in the German scientific world from Professor Albert Einstein down was there, and spoke of the performance as inaugurating a new movie world.

Hans Vogt and Joseph Masolle, the inventors, have been working on the device for months. So has Leo Deforest, an American, who expects to present talking movies to New York soon. The principle used by both is the same, but the Germans got it first.

Of course, there is much room for improvements. It sounds scratchy, like a cheap phonograph, especially for violin music, which is the easiest sound to reproduce, the quality of the tone is perfect. The human voice is the hardest sound to reproduce, so there will have to be much improvement before the talking movie will be common.

The synchronization of sound and picture is perfect because both are filmed together. As the camera takes the picture, a portion of the negative is exposed to the sounds. Sound has microphone vibrations which cause violet rays to record on a selenium tube and this is the principle used.

Seven distinct processes besides the regular photo part are on the film. As a result, the picture reproduces the sound in a mass of fine parallel lines on the negative. When the positive is reeled off, the process is reversed, light passing through the fine lines up on more selenium, and thus the reproducing process begins. The first result is faint of course, but is strengthened by electric currents and can be heard plainly from the stage.

The novelty of the device lies in the manner in which these first faint tones are developed into powerful sound. It is here that there is room for improvement.

**FOR SALE**

Few pairs pedigree Silver Plack Foxes. Good breeding stock.  
**OLIVER S. McNEILL**  
New Perth  
8026-20-9i.

**Notice to Oyster Fishermen**

Notice is hereby given to Oyster Fishermen that the season will open on the twenty-fifth day of September. All fishermen must procure a license before beginning operations. Applications for same will be made to the overseers for the different counties.

S. T. GALLANT,  
Inspector of Fisheries  
8041-20-31.

**AUCTION SALE**

There will be held an Auction Sale of household furniture etc., at the residence of the late John McDonald, New Glasgow, on Monday, September 25th, beginning at 1 o'clock p. m.

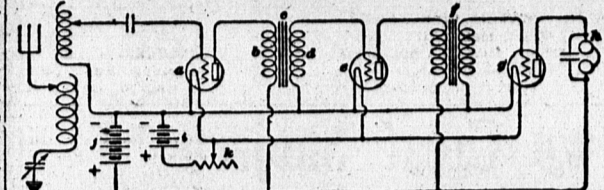

If day of sale proves unfavorable sale will be held the first fine day following.

W. D. McCoubrey,  
Auctioneer

**How to Construct and Operate a Radio Telephone Receiving Set**

By Harry F. Dart, Compiler of the Radio Operator's Course for the International Correspondence Schools

Article 4. Two-Step Amplifier.  
A combined detector and amplifier is indicated in the accompanying sketch. The extreme left part of the circuit represents the usual antenna with the primary and secondary coils and their auxiliaries. The incoming signal impulses are passed through an electron tube (a) acting as a detector, but instead of then passing through the telephone receivers, the signal impulses pass through the primary (often marked input) winding (b) of an iron-core transformer (c). For best operation

the resistance of this winding of the transformer should be about 10,000 ohms, necessitating a winding of many turns of very fine wire. By transformer action much of the energy in the primary is transferred from the primary to the secondary winding (d) which is often made up of about one-tenth as many turns as are used in the primary. The secondary coil (d) is connected between the filament and the grid of another tube (e), and the energy which the iron core transformer (c) receives is supplied to the grid of tube (e). The energy is amplified or strengthened several times in the tube probably as much as eight times under favorable conditions and the signal impulses pass from the plate of tube (e) through another iron-core transformer (f) and into a third tube (g). In this

er and the other of another maker. The precaution will help eliminate many of the local noises generally observable in a set of this type.

It should be noted that only one filament battery (i) and one common plate battery (j) are shown in the figure. This seems to work very well in receiving sets, and good results have been secured with only one filament-control rheostat (k). It is usually preferable to use a different rheostat for each tube, so that their operation may be controlled separately.

Coupling the amplifying tubes together by high resistance in place of the iron-core transformers has been used to some extent. However, resistance coupling does not work well in the reception of signals on wave-lengths less than 1,000 meters.
