Rainbow Trout In Pisquid Lake

(Fisheries Branch, Ottawa)
Rainbow trout, indigenous to Western Canada waters and one of the gamiest of game fishes, continue to thrive in Pisquid lake, Prince Edward Island, where they were introduced several years ago by the Fish Culture Division of the Fisheries Branch. Additional evidence to this effect is given by the fact that during the spawning season just over, the Fish Culture Division was able to collect 27,000 or more Rainbow eggs in the lake.

An experimental introduction of Rainbow trout fry into Pisquid lake was made in 1925, and a second lot of fry were placed in the lake in the following year. Results were soon apparent and in 1927 and 1928 anglers found fine sport. In the 1928 season at the lake about 225 Rainbow were landed the fish averaging two pounds or more in weight. The 1928 catch were more than twice as large as the catch in the previous summer. Reports from Prince Edward Island are to the effect that the Rainbow trout is much harder to land than the native speckled trout of either the fresh water or sea run strains. The angling season for Rainbow at Pisquid lake is from July 1st, to October 31st, inclusive, but fly fishing only is permitted. There is a size limit of ten inches and a bag limit of three fish.

Requests have been made to the Fisheries Branch to have various other Maritime Province waters stocked with Rainbow trout and examination of some of these waters will be made this summer to determine their suitability for this fish. However, it has already been established that it is only in waters that can be specially screened to prevent migration of the fish that Rainbow trout may be placed with any possibility of successful permanent results, and a widespread distribution cannot reasonably be attempted. Some waters which, to the layman, might seem to be suitable cannot be effectively screened in the manner which it is

Pay it to-day!

When you walk up the street, with a receipt in full in your pocket, knowing that your name is clear on the ledger "it's a gra-a-and and glorious feeling. Bring in your bill today, we'd rather write receipts than go to the circus.

Moore & McLeod Limited

necessary to employ to control the movement of Rainbow trout. In a number of cases the introduction of Rainbow trout into waters in the Eastern United States has been a failure because it has been found impossible to prevent migration. For the same reason and experiment in the Bear River area in Nova Scotia some years ago failed of success.

Cultivation In the Orchard

W. S. Blair, Superintendent, Dominion Experimental Farm, Kentville N. S.

After the first working which is done as soon as the ground is dry enough to work, the cultivation in the orchard should be shallow. In too many cases the period between cultivations is too long, and it is well to endeavor to get over the land with the cultivator or harrow every week, keeping the surface loose and light to a depth of two to two and one-half inches. This cultivation will keep the ground free of weeds, and give good moisture conditions.

not be set to cut too deeply after the first early working. The drag harrow set shallow, or the orchard wheel-cultivator, may employed. The reason for shallow cultivation is that the feeding roots run toward the surface where plant food is being liberated, and if deep cultivation is practised these roots may be destroyed or injured.

Toward the latter part of June and not later than early July cultivation should cease entirely, and a cover crop of common vetch or buckwheat be sown. This is seeded before the last cultivation, and this operation covers the seed. It very often happens that weed growth, such as wild radish, will start up vigorously, in which case a cover crop seeding may not be necessary. Millet may be used as a cover crop but it requires considerable moisture, and may dry out the soil too much should the early fall rains be light. Sand vetch and clovers are not advised, as they do not make sufficient growth by fall, but if alternate strips are cultivated and the others allowed to grow, a good growth to provide humus is possible the year after seeding, and this practice has been followed by some orchardists with satisfactory results.

Minard's Liniment for Coughs & Colds.

MT. STEWART NOTES

The many friends of Master Joseph Romard are glad to see him around again after being confined to his home for some time suffering from a broken arm.

What might have been a serious accident occurred to Mr. James McKay of French Village, while driving on the Blooming Point Road, on Saturday last. The car struck a bank of sand and skidded then turned completely over, pinning Mr. McKay underneath. Luckily, however, Dr. A. B. Martin arrived on the scene of the accident, and succeeded in extricating Mr. McKay from the debris. The top and windshield were torn completely off, and when the car was righted again, it reminded one of Seagrave's racer.

Mr. and Mrs. Howard Court, Hunter River, spent a few days in Mt. Stewart last week.

Mr. F. G. Leard arrived home from New York on Saturday, by car, where he spent the past few months.

Mr. Artemas Jardine, Charlottetown, paid a visit to relatives and friends in Mt. Stewart on Sunday.

Mr. Arthur Jay, Borden, paid a visit to his old home in Mt. Stewart on Sunday.

Mr. Joseph Sherran, assistant jail-keeper at Charlottetown, was in Mt. Stewart last week.

Mr. Ernest Affleck spent a few days in Charlottetown last week.

Mrs. R. C. Clark, Mrs. George Clark, Mrs. William McKenzie, Mrs. E. Birt and Mrs. Keir Clark motored to Charlottetown last week.

Mr. William Ives and family, Montague, motored through Mt. Stewart on Sunday last.

Mr. John R. McLaughlin, Borden,

Good Results So Sure

You do not have to experiment with Eno's "Fruit Salt." Millions have, in the past sixty years, proved its worth as a non-habit-forming health beverage. There is only one Eno. Resolutely refuse substitutes.

ENO'S FRUIT SALT

The words "Fruit Salt" and ENO are the registered trade marks of J. C. ENO Ltd.

paid a visit to relatives at Lead of Hillsboro on Sunday.

Miss Emeline Coffin, R. N., left for New York on Thursday after spending some few months at her home in Mt. Stewart.

Mrs. Jas. Brady, Charlottetown, spent a few days in Mt. Stewart last week.

Mr. and Mrs. Roy McLean, Souris, paid a visit to relatives in Mt. Stewart on Sunday.

Miss E. Jardine, Charlottetown, is spending some time in Mt. Stewart, the guest of her sister, Mrs. Henrietta Coffin.

Dr. Garth Toombs and Mr. Wendell Toombs, left for Western Canada on Monday, after spending some time at their former home in Mt. Stewart.

Miss Margaret Coffin is spending a few days in Georgetown. Dr. A. B. Martin is having the ex-

terior of his residence painted, the work being done by Mr. Ingles of O'Leary.

Mrs. Merrit, accompanied by her daughter, both of Halifax, are visiting in Mt. Stewart, the guest of her daughter, Mrs. Palfrey.

Congratulations to Dr. and Mrs. A. B. Martin on the birth of a bouncing baby girl.—D.

American products are being shown at the annual fair at Bordeaux, France, this year.

Production of petroleum in Ecuador last year was more than six times that of 1925.

In the past 10 years Brikan has paid out nearly \$2,000,000 in unemployment benefits.

SCHOONER ABANDONED
(Canadian Press)
HALIFAX, N. S., June 10—The Gloucester fishing schooner Mary Sears, was abandoned at sea this morning, on fire. Her crew are being brought to Halifax by the French trawler, Sergeant Gouarme, according to a wireless message from Capt. Robin of the Gouarme to his agent here. The message read: "Bound to Halifax with crew of American schooner Mary Sears set on fire this morning. Arrival tomorrow morning early." The message did not make clear whether the ship caught fire and was abandoned or was damaged and set afire as a menace to navigation. The schooner has been engaged in mackerel seining off the Nova Scotia coast.

Plant Inspection
The inspection of imported plants is assuming vast proportions. If one desires to import nursery stock, bulbs or indeed any plant, a permit must be secured from Ottawa in the shape of a label or tag to be attached to the package by the sender. This may look officious to the unadvised importer, but it is highly necessary inasmuch as it secures an adequate inspection by qualified inspectors. The returns from the Federal Entomological Branch show that in the year ending 31st March, 1927, 34,624,880 plants were inspected, either at the port of arrival or at destination, and 590 infestations of insect pests and fungoid diseases were intercepted. This may seem a small return for such an amount of labor, but the history of all the serious losses from insects in Canada, losses which are estimated at \$150,000,000 annually, began from similar small importations. A list is given of the insects found by the inspectors, and among them are the Brown-tail moth, a serious woodland pest; the European Earwig, a somewhat harmless insect with a penchant for dahlias and carnation buds in Great Britain, but becoming rather a nuisance in British Columbia; the European pine shoot moth, various scale insects, root borers, mites and bulb flies, corn earworms, grain insects and many others. This is the right control: "An ounce of prevention is better than a pound of cure."

Superphosphate1000 pounds
Muriate of Potash240 pounds
Filler (dry sand) 310 pounds
Total 2000
On very light soil the potash may be increased to 8 or 10 per cent.
"WORMS" ON SHADE TREES
Now is the time to watch out for the first sign of the invasion of the shade and fruit trees by the various larvae which cause such destruction. There was a severe attack by the Tussock Moth last year and it may be repeated. The warm weather of the past few days is likely to have started the eggs and the young caterpillars soon hatch. A timely application of spray solution will do much to save the situation.

STOCK NOTES
The Maritime Farmer of June 4th has a bunch of notes relating to P. E. Island cattle. They deal principally with Holsteins and Shorthorns, some remarkable fine animals of these breeds having been sold by their raisers. A number of live stock improvement centres have been organized, and will be supplied with bulls on loan, by the Provincial Dept. of Agriculture.
The importation of good sires will undoubtedly bring the horse industry still further up the grade. Notes on these sires form very good reading for the many who desire to see this industry flourish.

Onion Maggots: Their Control

The Director of Publicity, Dominion Department of Agriculture, OTTAWA
Onion maggot flies have been emerging for the last week and will commence to lay their first eggs on the onion crop in a very few days. Control measures should be applied before this takes place.
Experiments conducted at Ottawa have shown conclusively that best control is brought about by spraying the young seedlings with an oil emulsion spray. The oil used is a light lubricating oil which can be obtained from any of the oil companies of this city and should have the following specifications; specific gravity 87-93 at 20 degrees centigrade, a viscosity of 90-200 seconds at 100 degrees Fahrenheit and a volatility of not over 2 per cent. These figures, although perhaps confusing to you will be readily understood by the oil companies.

To prepare the spray, mix a gallon of Bordeaux mixture by first dissolving 2 ounces of bluestone in a gallon of water, and then adding 2 ounces of hydrated lime to the solution. This should be thoroughly stirred and poured into a pail containing a gallon of the oil. By means of a bucket pump or other small sprayer pump the liquid back upon itself until a perfect emulsion of the oil and Bordeaux is secured. This should take about 3-5 minutes and can be tested by pouring a small quantity into water. If the emulsion mixes perfectly with the water and leaves no oil droplets on the surface it is ready to use but should free oil be present further agitation will be necessary. When the oil is thoroughly emulsified mix the two gallons with 39 gallons of water and your spray solution is ready.

The onions should be sprayed four times, the first spray being applied immediately upon receipt of this letter, and subsequent sprays at intervals of one week. In spraying, the whole surface of the ground should be covered as well as the tiny plants. Thorough work is essential to good control and 75-100 gallons of spray should be used per acre at each application. Put on the first spray now cover the plants and ground thoroughly; use plenty of material.
This control has given excellent results in heavily infested fields of the Ottawa district and will increase your yields one to two hundred per cent.
If further information is desired apply to the Publication Branch, Department of Agriculture Ottawa, or to Entomologist in Charge of Vegetable Insect Investigations, Department of Agriculture, Ottawa.

FOUR KILLED

(Special to the Guardian)
DETROIT, June 10—Two men were burned to death and a third suffered burns thought to be fatal when a Waco biplane crashed in flames at Nine Mile and Schoenherr Roads, at 5 p. m. yesterday, a few minutes after it had taken off from Hartung flying field on Gratiot Avenue.
WILMINGTON, N. C., June 10.

Burned From The Sun?

MINARD'S "KING OF PAIN" LINIMENT

Lieut.-Col. John A. Hambleton of Baltimore and Mr. and Mrs. J. Von Der Heyden of New York were instantly killed near the county airport here Saturday when Colonel Hambleton's aeroplane, the Governor crashed. The accident was witnessed by Mrs. Hambleton, Colonel Hambleton, banker, vice-president of the Pan-American Airways, and close friend of Colonel Charles A. Lindbergh, was coming to Wilmington for the week-end. Mr. and Mrs. Von Der Heyden were week-end guests.

GAY'S PLANTS

Flowers have been so much improved of late that old time flowers can hardly now be recognized.
Time for planting—Annuals—do not plant before June. Perennials and Biennials are hardy, plant when ground is fit—now! Early cabbage and Cauliflower from May 25th to June 31st. Tomatoes and Celery not before June to July 15th. Late Cabbage, Cauliflower and Celery from June 20th to July 31st.
Please take notice that we will not accept an order by mail, express, or freight for less than two dollars; this can be arranged by having a neighbor or two join in the order, when requiring small quantities—Our terms are cash with order.
Annual bedding flower plants, Aster, Phlox, Stocks, Petunias, Verbena, Zinnia, Balsam, Salpiglossis, Snapdragon, Cosmos, Marigold, Alyssum, Golden Feather, Lobelia. Above 25c doz. prepaid by mail. Seeding Pansy, Sweet William, Carnation Pink, Daisy, Kochia, Columbine, at 50c doz. Hollyhocks, winter killed none. Wintered over Perennials and Biennials, Pansy, Daisy, Sweet William, and Perennial Poppy at \$1.20 per doz. Digitalis or Fox Glove, Canterbury Bell at 15c each, \$1.50 per doz. Perennial Larkspur two year old plants 35c each.
Vegetable Plants—Extra early Cabbage, Cauliflower and Celery 25c doz. \$1.00 per 100. Extra early Tomato 60c doz. second early 40c per doz. Late Tomato 30c doz. include 50 doz. for postage.
Late Cabbage for planting from June 20 to July 31st at 40c per 100, 50c prepaid by mail. Wintered over Perennials and Biennials by mail postage must be included 25c per doz. Early Cabbage, Cauliflower and Celery 20c per 100 for postage. Carrier's Seed Store, 72-74 Queen St. and W. F. Burke in our old stand, east end of market, handle our plants and fresh plants are delivered to them daily.
We will be pleased to have customers call at our gardens head of Prince Street and personally select plants. Bring baskets or boxes to hold plants.
If ripe Tomatoes equired, order the extra early plants they produce more Tomatoes, and lots of ripe ones. If you are a fox farmer feed ripe tomatoes to your foxes, and one way to save money is to grow them yourself.
Do not forget to sign name and address. Write plainly. Remember postage.
