their rights and from the point of view of assisting the fox raising industry in their country it was an excellent measure. For us in Canada to complain of the effect of the American tariff upon our trade only strengthens them in their determination. They have been playing this game ever since 1868 and they have no intention of granting us reciprocity unless accompanied by the kind of union that no true Britisher will stand for. There is therefore no course open for us but to stand up like men and hold our own, and that with our unlimited resources we are well equipped to do. So far as the silver fox industry is concerned if the United States tariff will have the effect of uniting the ranchers of Prince Edward Island it will in time do far more good than harm.

Just why you in this Province should play into the hands of the American to the detriment of your British and European trade by selling them your best live breeders is something that I cannot understand. It surely would be far more to the interest of the ranchers if they were to pledge together not to ship from the island a single live fox of a high quality standard. Then, if they will go a step further and join together in a cooperative marketing plan under government standardization there need be no question but that in time they will win out.

There is yet another phase of this question that should interest Islanders generally. Prince Edward Island has a wide reputation as a summer resort which however needs greater publicity. Why not use the fox fur industry as an added inducement to visitors to spend their holidays here? Just as some of our neighbours are said to come to Montreal and satisfy cravings of her than those of simple sight-seeing, and as others go to Murray Bay in search of the unique home-spun made in that district, so it should be an even greater attraction if Charlottetown were to specialize in the highest type of fox fur garments either ready to wear or made to order. Each winter's fashions are foretold in Paris and New York from nine to twelve months in advance, and fur garment designers and workers are readily obtainable in Montreal and New York. The remainder of the task

MEETING OF CHARLOTTE-TOWN Yacht Club at 7.30 p. m. yesterday. An adjourned prohibition case was further adjourned and the case of a woman charged with disorderly conduct was also adjourned.

ATTENDS TRAINING CAMP.—Mrs. (Rev.) E. A. Westmoreland, Vernon, left this morning by S. S. Hochelaga for Wallace, N. S., to attend the Leader's Training Camp for C. G. T. Workers.

W. Storneland was chosen by the P. E. I. Board to represent them as Camp Hostess this year. The island feels honored in having a representative who is a graduate of three colleges and who has always devoted her best energies to the upbuilding of Christ's Kingdom wherever she has labored.

SUCCESSFUL ENTERTAINMENT

A very enjoyable concert was held in Kelly's Cross hall on Friday, July 24th. The characters who took part certainly displayed their excellent talent. The programme consisted of:—Solo—by Mrs. Francis McQuaid who received a hearty encore. Instrumental music by the Kelly's Cross Orchestra. Solo by Mr. Malachias Callaghan. Irish Washerwoman danced by Miss Doris McDonald. "Dialogue" by Messrs Malachias and James Callaghan. This part is certainly worthy of mention. Instrumental Music by Kelly's Cross Orchestra. Recitation by James Callaghan. Solo—by Miss Eileen Murray. Violin and Mandolin selections by Miss Myrtle Germain and Mr. Johnny McQuaid. Step-dance—by Messrs Urias and Edwin Carragher. Solo—by Malachias Callaghan. The singing of God Save The King brought the successful entertainment to a close after which dancing was indulged in. The music being furnished by the Kelly's Cross Orchestra.

is simply that of giving quality and service and of advertising to the touring public in the United States and while passing through Canada.

Those who might feel that Charlottetown is too far from the larger centres of population to succeed in a venture of this kind will do well to remember Elbert Hubbard's saying that men will trek far into the woods to obtain something that is better than can be had elsewhere. In any case co-operation is of prime importance and, just as the arid growers of the prairies are uniting in the marketing of their wheat and the fruit growers of California, by combining, are pushing their Sun-kist oranges and the Sun-Maid raisins into every civilized country in the world, so can the fox ranchers of P. E. I., by joining together and raising and maintaining the standard of their foxes command a steady and remunerative market wherever furs of any kind are worn.

I am, Sir, etc. H. K. HEMMING. Minister's Linctant for Neuralgia.

POLICE COURT.—An autoist charged with fast and reckless driving was fined twenty dollars or thirty days, at the Police Court yesterday. An adjourned prohibition case was further adjourned and the case of a woman charged with disorderly conduct was also adjourned.

PERSONALS

Mrs. Fred Hine, now of Toronto is visiting in Charlottetown with her lovely little son. They are staying with Mr. Fred Hine's parents, Mr. and Mrs. Charles Hine, Rockford Street. Mr. Hine's mother is living with them, so that there are up under the same roof members of the family to the fourth generation, an unusual circumstance!

THIS BLACK SATIN FROCK IS TRIMMED WITH CREAM LACE

By Marie Belmont

Heavy lace in a lovely cream tone makes a very effective trimming for this youthful black frock. The dress is cut with a straight back all in one piece. The bodice is fitted a bit at the sides so that it wrinkles across the figure. The skirt has a very full front, with pointed insets of the lace in front and another inset through the skirt. The back is untrimmed. The front fullness, which has been pointed for so long continues to be used and will appear in Fall frocks as well. Other Fall dresses reverse the idea and concentrate all their fullness at the back.

CLINTON NOTES

The farmers of Clinton are busy harvesting the hay crop which has proved a good yield in this section of the Island. The carpenters and plasterers are busily engaged at present repairing the school house and making it into one large room as it has ceased to be a graded school on account of the decrease in attendance. Mrs. Lavina Rankin of Perthamby, New Jersey, is spending the summer in Clinton at the home of her brother Mr. James Pickett. Mr. and Mrs. William De Long of Brooklyn New York are spending the summer at the home of the latter's brother Mr. Harvey Woodside Clinton. This is Mr. De Long's first visit to the Island and he is more than pleased with the beautiful scenery and invigorating climate of this country. Mr. Bruce MacLeod of the Bank of Nova Scotia, Kensington is spending his vacation with Mr. Bert MacKay Clinton. Miss Carrie Woodside Clinton is visiting in Northcote and Kelvin the guest of Mrs. Stanley Sharpe and Miss Edna MacKenzie. Miss Jennie MacKinnon Graham's boat is spending her vacation with her aunt Mrs. William Warren Clinton. Mrs. Marshall Woodside Pittsburg Ohio is spending the summer in North River and Clinton. While in Clinton she is the guest of Mr. and Mrs. Leggie Woodside. The stock market at Clinton on Saturday morning July 25th, and left a baby son at the home of Mr. and Mrs. William Warren. Miss Gladys Pickett will not be spending a few days with her sister Mrs. Justin Woodside, Clinton.

Text of Bryan's Evolution Speech

(Continued.) Insists Evolution is Not Proved

Evolution is not truth. It is merely a hypothesis—it is millions of guesses strung together. It had not been proven in the days of Darwin; he expressed astonishment that with two or three million species it had been impossible to trace any species to any other species. It had not been proven in the days of Huxley, and it has not been proven up to today. It is less than four years ago that Professor Bateson came all the way from London to Canada to tell the American scientists that every effort to trace one species to another had still failed. He said he had doubts about the origin of species. But of what value is evolution if it cannot explain the origin of species? While many scientists accept evolution as if it were a fact, they all admit when questioned, that no explanation has been found into how one species developed into another.

Darwin suggested two laws, sex-ual selection and natural selection. Sexual selection has been laughed out of the classroom and natural selection is being abandoned, and no new explanation is satisfactory and more to scientists. Some of the more rash advocates of evolution are now trying to establish the law of causality or the Copernican theory of the absurdity of such a claim is matter when one considers that apparent when we remember that evolution not only offers no suggestion as to how the law of causality by throwing a weight into the air and that any one can prove as the roundness of the earth by itself. Darwin suggested two laws, sexual selection and natural selection. Sexual selection has been laughed out of the classroom and natural selection is being abandoned, and no new explanation is satisfactory and more to scientists. Some of the more rash advocates of evolution are now trying to establish the law of causality or the Copernican theory of the absurdity of such a claim is matter when one considers that apparent when we remember that evolution not only offers no suggestion as to how the law of causality by throwing a weight into the air and that any one can prove as the roundness of the earth by itself.

Sex Chemistry as an Obstacle. Chemistry is an insurmountable obstacle in the path of evolution. It is one of the greatest of the sciences; it separates the atoms and holds them in fixed and permanent proportions. Water is H<sub>2</sub>O, as it has been before life appeared and death has never changed; neither can it be shown that anything else has materially changed since it first came into existence. There is no more reason to believe that man descended from some inferior animal than there is to believe that a stately mansion has descended from a small cottage. Resemblances are not proof of descent. As one fact, such as the absence of a tail, does not demand something more than a thousand witnesses could swear to, so the inability of the sciences to trace any one of the millions of species to another species outweighs all the resemblances upon which evolutionists rely to establish man's blood relationship with the brutes.

But while the wisest scientists cannot prove a rushing power that such evolution is supposed to be, there is a lifting power that any child can understand. The plant lifts the mineral up into a higher world, and the animal lifts the plant up into a still higher world. So it has been reasoned by analogy, man rises, not by a power within him, but only when drawn upward by a higher power. There is a spiritual gravitation that draws all souls toward Heaven, and as surely as any of the physical forces that has all matter on the surface of the earth toward the earth's centre, Christ is our drawing power; He said, "I, if I be lifted up from earth, will draw all men unto Me," and His promise is being fulfilled daily all over the world.

It must be remembered that the law under consideration in this case does not prohibit the teaching of evolution up to the line that separates man from the lower forms of animal life. The law might well have gone further than that and prohibit the teaching of evolution in lower forms of life; the law is a very conservative statement of the people's opposition to an anti-Biblical system. It is not content to teach the law permitted; he, for reasons of his own, persisted in teaching that which was forbidden for reasons entirely satisfactory to the lawmakers.

"Misuse" of the Word "Evolution". Most of the people who believe in evolution do not know what evolution means. One of the science books taught in the Dayton School has a chapter on "Evolution" which is a common misuse of the term. People speak of the evolution of the telephone, the automobile and the musical instrument. But these are merely illustrations of man's power to deal intelligently with inanimate matter; there is no growth from within in the development of machinery. Equally improper is the use of the word "evolution" to describe the growth of a plant from an egg, or the development of any form of animal life from a single cell. All these give us a circle, not a change from one species to another.

Evolution—the evolution in this case, and the only evolution that is a matter of controversy anywhere—is the evolution of man, where the gist of the controversy is set forth in the books now prohibited by the new State law, and illustrated in the diagram printed on page 124 of Hunter's Civic Biology. The author estimates the number of species in "man's kindred" at 518,900. These are divided into eighteen classes, and each class is indicated on the diagram by a circle. It begins with protozoa and ends with the mammals.

No circle is reserved for man alone. He is, according to the diagram, shut up in the little circle entitled "mammals," with 3,499 other species of mammals. Does it not seem a little unfair not to distinguish between man and lower forms of life? What do we say of the intelligence, not to say religion, of those who are so particular to distinguish between fishes and reptiles and birds, but put a man with an immortal soul in the same circle with the wolf, the hyena and the skunk? What must be the impression made upon children by such a degradation of man?

Attacks Proofs of Evolution

The evolutionist does not undertake to tell us how protozoa, moved by interior and resident forces, sent life up through all the various species, and cannot prove that there was actual "the boy or girl of average ability upon admission to the secondary school is not a thinking individual." Whatever may be said in favor of teaching evolution to adults, it surely is not proper to teach it to children who are not yet able to think.

It is not so serious a matter as one might be tempted to speculate upon the various degrees of relationship that, according to evolutionists, exist between man and other forms of life. It might require some very nice calculation to determine at what degree of relationship the killing of a relative is as firmly established as the law of ceasing to be murder and the outgiving of the Copernican theory of the absurdity of such a claim is matter when one considers that apparent when we remember that evolution not only offers no suggestion as to how the law of causality by throwing a weight into the air and that any one can prove as the roundness of the earth by itself.

GILSON "MAGIC" The ONE PIECE Furnace Built of Tungsten Plate

\$24.50 BALANCE ON EASY TERMS for everybody

The NEW Invention. TUNGSTEN PLATE Electrically Arc-Welded into a ONE-PIECE Furnace. The Gilson discovery has hit the furnace trade like a bombshell. For the first time, it means a real ONE-PIECE Furnace—permanently tight as an egg against leaks of gas, dust or smoke. For the first time, TUNGSTEN STEEL PLATE is used in a furnace. For the first time, high furnace prices have been shattered. Efficiency has been increased, economy has been enhanced—all at one stroke by this master invention.

12 Months to Pay See Me To-Day! CURRIE & MURNAGHAN 71 Queen Street. Phone 488

thought-combinizing formula the world has yet known." It is more than that; it dispenses with thinking entirely and relies on the imagination. On page 141 Darwin attempted to trace the mind of man back to the mind of lower animals. On pages 113 and 114 he endeavors to trace man's moral nature back to the animals. It is all animal, animal, animal, with never a thought of God or of religion. (To be continued.)

A MODEL POULTRY FARM. Recently it was the delight of one interested in Charlottetown news to spend a few days in the portion of the Province lying east of the Capital. While there the privilege it was to visit the home of Mr. and Mrs. Joseph A. Hughes, Bedford. Here was found everything in modern equipment and all in readiness for effective use. But the most compelling feature prominent in this beautifully producing farm was the display of pure bred hens and chickens. While Mr. Hughes maintains a vigilant supervision over the farming operations, Mrs. Hughes exercises a ceaseless scrutiny over her poultry flocks. And they are multi-tude. She usually has one hundred hens and one hundred and twenty-five chickens. These are all pure bred and display the characteristics of their ancestors. The individuals are all healthy, vigorous, and industrious specimens, and constitute a reflex on the sound judgment and rational care that Mrs. Hughes has exercised in the constitution and support of the flock. She aims at results and invariably secures them. So competent has she been in developing layers that the stock now produced has commanded attention abroad and she now enjoys the advantages of a market abroad, all her own, which yields returns far in excess of any provincial enterprise.

But this superiority in individual birds and excellence in egg and poultry product, have been attained by the application of common sense and sound judgment to practical experience in the fundamentals and scrupulous details of the business, and a ceaseless vigilance over the whole system. She does not tolerate any mongrel intrusion in her flock, and for breeders, she selects the choicest of the choice. No theory that has not proved itself in actual practice finds any favor. This process of elimination and selection maintains an ascendant progression that must aim at perfection. Scrupulous care is taken to see that all influences and retrogressive factors are removed that may nullify any favor. No annoyance, no vermin is tolerated. Then the matter of accommodation is carefully planned and securely defensible, and the safety of the

brooders is always assured. Carefully planned, also, are the conveniences for feeding and laying, as well as for roosting; and recreation, abundant graveling opportunities are afforded. Then all causes are carefully restrained that may cause the birds shock or annoyance, so that the birds have nothing to engage attention, but feeding, working and roosting, and laying. These conditions may seem elaborate in an ordinary farm home, where other multifarious duties must be performed, yet similar courting conditions and results could be attained in many farm homes, if the same efficient experience and practical care were exercised. First, know what is best to do, be assured how best to do it, then do it. Thus will success be your reward.

C. N. R. Radio Programme TUESDAY, AUGUST 4, 1925. CNRA (313 Metres, MONCTON, N. B. 9 p.m. (A. S. T.)—Studio Programme by Artists from CNR Staff, Moncton, N. B. 1. Bass Solos (a) "You Came at Dawning" (Ball), (b) "Roses of My Heart" (Lohr)—Mrs. Charles Dodge. 2. Soprano Solo—"To Tell You How I Love You" (Liddle)—Miss E. M. Hoar. 3. Tenor Solos (a) "For Three" (Gavenport), (b) "It's a Long Way to Singapore"—Mr. A. H. Lindsay. 4. Reading—"She Took Him"—Mr. Lorne McKendrick. 5. Baritone Solos (a) "The Cap-

tain's Ditty" (Sullivan), (b) "Mattinats" (Tosti)—Mr. George C. Davidson. 6. Saxophone Solo (a) "Delsarte" (Benet), (b) "The Harvest Moon" (Rayder)—Mr. Gordon Douglas. 7.
