**POULTRY NOTES**  
 Submitted by the Poultry Division, Live Stock Branch. This information is given in the interests of better farm flocks. All inquiries to be addressed to Box 200, Charlottetown.

The essentials of a poultry house may be stated as follows:  
 1.—The house must be comfortable.  
 2. Free from draughts.  
 3. Dry.  
 4. Light.  
 5. Not overcrowded.  
 6. House must be well ventilated.

Egg production is the primary object in keeping hens, and their housing conditions play a very important part in determining success or failure. Only by observing the factors essential to successful housing, and properly balancing these, will the operator be able to make the business profitable.

**Ventilation**—It is necessary to ventilate to secure dryness, pure air and proper temperature. Bad ventilation is indicated by frost on the walls or ceiling, and a foul atmosphere. A greater amount of moisture is found for pound live weight than in any other class of stock. The ventilation system must remove this moisture from the pen, provide fresh air, and do so without producing draughts in the house. Cotton curtains, window shutters, and open front houses are now the most general, with the cotton curtain in conjunction with or without the straw loft, proving the most popular. Curtains must be adjusted from time to time to meet the varying weather conditions, and unless one is prepared to do this, better results will, no doubt, be secured from the use of the open front house.

**Draughts**—There is perhaps no condition in the poultry house which is responsible for more mortality, particularly true if the birds are in a draught while on the roost, or while working on the floor. Draughts chill the birds, making them uncomfortable and therefore unproductive, and also produce disease such as roup, pneumonia and kindred ailments in the flock, resulting in heavy mortality. In constructing the house every effort should be made to eliminate draughts, especially those which will strike the birds directly. The sides and back of house should be absolutely tight and with ventilation from an open front or eaves, little difficulty will be experienced.

**Dryness**—There are two sources of dampness in a house. As previously stated, a large amount of moisture is exhaled from the lungs of the birds. Moisture sometimes enters the house through a badly constructed floor or because of a damp location. Moisture not from within a house, but from outside, can accumulate in the pen if it will gradually lower the vitality of the stock, production will decrease, and disease will develop. The trouble is usually more marked in the Fall and Winter than during other seasons of the year. Where the moisture is not entering the house through the floor, in part or in front of the house, it should be placed in upright windows placed in an upright position will give best results as the sun's rays will then cover greater depth on the floor of the pen and as the sun travels around the west during the day, practically the entire floor will be swept by the sun's rays. This would be impossible if the windows were placed on the side.

The value of direct sunlight in the hen house is now becoming more and more appreciated from the standpoint of its effect upon the general health of the birds in the winter, and also upon the hatchability of the eggs. This action of the direct sunshine is due to the ultra violet rays which are filtered out as the sunlight passes through ordinary window glass. Glass substitutes have been developed which are claimed, and recently proven, will admit ultra violet rays. Some of these have been tested with satisfactory results. Cello glass has been tried out by the writer with good results.

**SANITATION**—Birds that are not healthy will not lay. The houses must be kept in a clean, sanitary condition. This requires close attention to the removal of droppings, frequent change of litter, and the proper ventilation of the house. In order to facilitate this very important work the plan and arrangement of the various

**FATTENING OF CHICKEN FOR MARKET**  
 Since the season for fattening and marketing chicken is practically over we will not dwell on this subject. Some time ago in discussion with poultrymen we picked up this very interesting piece of information.—Alonso Webster of Kensington, on Dec. 15th, purchased 47 chicken, 192 lbs at 9c per lb. These chicken were so thin they were classed as culls. Mr. Webster felt that if he purchased for fattening purposes, he could secure for himself a profit on this transaction. In the course of three or four weeks Mr. Webster brought the birds in for sale with the following result:—he returned 47 chickens, weighing 226 lbs dressed, receiving 27c a lb., or \$61.02. Three birds died, and four gib birds he kept at home for own use. Mr. Webster's net profit, allowing for feed, was \$40.00, plus the four breeders at home.

Poultry men please take note, and when next fall comes, do not fail to fatten your birds before marketing.

**Steam Engine Used Before Watt Born, Says Professor**  
**OLD STORY THAT JAMES WATT INVENTED STEAM ENGINE BY PLAYING WITH A TEA KETTLE HAS NO FOUNDATION IN FACT, DECLARES PROF. ANDRADE, WOOLWICH.**

LONDON, Jan. 31.—James Watt was not the inventor of the steam engine, according to Prof. Edward Neville de Costa Andrade, professor of physics in the Artillery College, Woolwich, who made this statement in a lecture at the Royal Institution on "Engines." Prof. Andrade said: "It is often stated that James Watt invented the steam engine by playing with a tea kettle. This is quite untrue. More than thirty years before Watt was born both Savery (Captain Thomas Savery, military engineer) and Newcomen (Thomas Newcomen, English engineer) constructed steam engines which were actually used for pumping."

Prof. Andrade showed a working model of Savery's engine, which sucked up the water into a vessel by the condensation of steam, and then drove the water up from this vessel by the pressure of steam. Newcomen used these principals, he said, but introduced the cylinder and piston, which was driven down by atmospheric pressure.

"The old story," said Professor Andrade, "that Watt was led to invent the steam engine by playing with a tea kettle has no foundation. What actually happened was that Watt, who was practising as an instrument maker, was asked to repair a model of a Newcomen engine. In investigating the causes which prevented the model working he was led to seek for a better design, and ultimately invented the essential advance that made the steam-engine an economic source of power.

"He used only low-pressure steam, on account of constructional difficulties, but every economical engine of today, reciprocating or turbine, ends up with one, on the Watt system, in which the steam, having been expanded to low pressure in other parts of the engine, does work by virtue of the partial vacuum created by a condenser."

"If Watt did not, correctly speaking, invent the steam engine, he nevertheless converted it from a clumsy and unreliable contrivance, used solely for pumping purposes, into a finished machine, using less than a quarter of the coal consumed by the face of industry, and placed England ahead of all her rivals as a manufacturing country at the beginning of the 19th century. Nearly every feature of an efficient modern reciprocating engine is said to be found in Watt's later designs. Watt's governor, with the rotating balls, is used in a variety of forms in engines of all kinds at the present day, from the gas engine to the gramophone motor.

"The finger of Watt governs speed and smooth playing of the record of the latest piece of dance music, which may command his memory to many for whom his engineering achievements make no appeal."

In the earlier portion of his lecture Professor Andrade demonstrated that steam is by no means the only substance which can be used for working an engine. The vapor of any liquid, in fact, such as alcohol or ether vapor, could be used. One could, in fact, work a toy engine by putting methylated spirits inside the boiler, and boiling water outside—a fact which the lecturer proved before the eyes of his audience.

Engines were once made which worked entirely by hot air, but they were enormously bulky. With four cylinders, each 14 feet in diameter, the hot air engine developed only 300 horse power. Liquid air was another means of propulsion, and the juvenile portion of the audience applauded heartily when the lecturer started a small model engine propelled by this method across the floor of the lecture hall. In practice, however, water—and water-vapor called steam—was, he said, by far the most convenient substance to use in any engine with a boiler.

Operated by an electric motor that can be plugged into a lighting circuit, a paddle has been invented to stir paint.

**Mt. Stewart Notes**  
 A good thing advertises itself. One electrician, Mr. Fred Leard, who returned from an "electrical job" at Cape Travers, is now busy wiring the homes of Messrs. Ray, Smallwood and Peter Dwyer.

Mr. Daniel McKay, Charlottetown, spent Wednesday in Mt. Stewart soliciting subscriptions for the Family Herald and Weekly Star.

We learn that Miss Rose Pigott, Savage Harbor, is among those who have gone to Charlottetown to take the short course in Domestic Science.

Our merchants are at present having their usual supply of ice put down. And now that the railway has backed the water for their new hydraulic filling station, which was formerly Grant's mill-dam, the ice is much better than when taken from the river.

On Wednesday, Feb. 1st, a number of farmers here and about, loaded a car of live hogs.

Some of the fishermen from here fished three days the past week, and were unable to fill a small box with what they caught. So some others who intended to try the present spring tides, on learning this, gave up the idea.

**REGULATING THE EGG TRADE.**  
 A very marked improvement in the egg trade of Canada has been made during the past seven years. The annual production of eggs in Canada in 1920 was 144 million according to a statement that appears in the report of the Honourable Mr. Motherwell, Minister of Agriculture, for the past fiscal year. Canada is now producing annually more than 260 million dozens. This increase of production has all been required to meet the home demand, which, it is pointed out, is a direct result of the application of the egg standards and efforts of the egg inspection service. Dealers throughout the country, it is pointed out by the Minister, are now practically unanimous in ascribing improvements in the egg trade to the adoption of the standards and regulations for marketing. Farmers have become interested in the production of a better product. Dealers, time transactions profitable than previously, there was a loss. The urban retailers have a better product to sell to the consuming public, resulting in more and better business to all parties engaged in egg production and marketing. Much credit must be given for this improvement in the egg industry to the inspection service, which, besides presenting to dealers and the public the benefits of standardized product, also give lectures before student bodies, women clubs, etc., and candling and grading demonstrations at the principal exhibitions throughout Canada, school fairs, boys' and girls' clubs, and other organized bodies interested in eggs.

The Canadian egg regulations require approval inspection on inter-provincial shipments in carlots and on export and import shipments. During the fiscal year reported by the Minister more than a half million dozen cases went through the hands of the inspectors, an increase of about 80,000 cases over the previous year. Of the shipments inspected in 1925-26 practically 4,000 shipments were approved, while 300 failed to justify a clear bill for shipment. The regulations also provide that all eggs sold in a domestic way be graded according to the Canadian legal standards. The officers of the egg inspection staff are constantly checking up on the grading of eggs in the premises of wholesale and retail dealers, and during 1927 made approximately 30,000 such calls, inspecting eggs, checking up methods of doing business and corresponding abuses and irregularities. While for the most part the business was found to be conducted in harmony with the regulations, it was necessary during the year to conduct 64 prosecutions for illegal practices. Of these only but six, which were dismissed on technicalities, were sustained.

**Helping Hand.**—Five members and one visitor met at the home of Mrs. Angus MacLean. A duet was a feature of the evening by Misses Jennette and Frances Singleton. The secretary is to send for the Patriotic Calendar.

**INSPIRATION**  
**MRS. NEIL D. MORRISON**  
 Seldom have the people of Charlottetown received such a shock as on the evening of January 26th when it became known that the Angel of Death visited the community claiming as its victim a highly respected resident of that place in the person of Mrs. Neil D. Morrison. Although deceased had not been long, she was well known to all, and her passing was a great loss to the community.

Mrs. Morrison was a lady of an exemplary character and a very pious Christian, and was highly esteemed by all who knew her. She seemed to have a natural gift of winning affections had a smile for everyone and that smile seemed to be infectious for to be in her company was always ready to lend a helping hand to the needy and if anyone in the neighborhood happened to be sick or in any way afflicted she was quick to be present caring for and comforting them as she herself knew how.

The late Mrs. Morrison was formerly Christina McDonald of Georgetown. There are left to mourn the loss of a devoted wife and loving mother and sorrowful husband and one daughter to whom have the sympathy of the whole community. Her funeral was one of the largest seen for some time.

May her soul rest in peace.—A.

**GEORGE A. MACINNIS.**

**IN MEMORIAM**  
**MRS. NEIL D. MORRISON**  
 The spacious home of the McIntyres was taxed to the utmost to accommodate the friends who were present on the occasion.

Early in the evening a large cradle filled with gifts was brought to the sitting room where they were presented to the blushing bride-to-be by Miss Mary C. McInnis and the respected resident of that place in the person of Mrs. Neil D. Morrison. Although deceased had not been long, she was well known to all, and her passing was a great loss to the community.

Mr. John S. McKinnon, president of the Grand River Rural Telephone Company then called upon Mr. Leo P. Braught who read the following address: Mrs. J. Alphonsus Brown was hurriedly called in who on seeing she had not many moments to live administered the last rites of the Roman Catholic Church. The late Mrs. Morrison was a lady of an exemplary character and a very pious Christian, and was highly esteemed by all who knew her. She seemed to have a natural gift of winning affections had a smile for everyone and that smile seemed to be infectious for to be in her company was always ready to lend a helping hand to the needy and if anyone in the neighborhood happened to be sick or in any way afflicted she was quick to be present caring for and comforting them as she herself knew how.

The late Mrs. Morrison was formerly Christina McDonald of Georgetown. There are left to mourn the loss of a devoted wife and loving mother and sorrowful husband and one daughter to whom have the sympathy of the whole community. Her funeral was one of the largest seen for some time.

**VERNON RIVER SCHOOL CONCERT**  
 On the evening of December 20th, 1927, a number of the residents of Vernon River and vicinity gathered in the school-room for the annual Christmas concert.

The school was tastefully decorated by teacher and pupils, with spruce, Christmas bells and garlands.

Mr. Willard Wood was appointed chairman and the following program, each number of which was well presented, was carried out:  
 Welcome by Freda Carver.  
 Chorus—Merry Christmas by School.  
 Recitation—Santa's Home by Fern Lea.  
 Duet—Santa Claus, by Bernice O'Keefe and Jean Carver.  
 Dialogue—Buying Eggs by 3 pupils.  
 Recitation—The Boy's Complaint by Joseph Currie.  
 Solo—Hi Ho The Merrio (encored) by Francis O'Keefe.  
 Recitation—You Gilt Up by Donald McDonald.  
 Drill—Christmas Its by 8 girls.  
 Recitation—A Puzzle In Names by Freda Carver.  
 Chorus—Flag Song by School.  
 Recitation—Choosing the Stocking by Ralph Lea.  
 Solo—Falling Leaf by Marie McDonald.  
 Recitation—My Favorite Tree by Rena Carver.  
 Dialogue—Rastus Rambles On by 2 Boys.  
 Recitation—I Had But Fifty Cents by Milton Wood.  
 Intermission—Sale of Candy.  
 Recitation—Canadian Born, by Aldie Carver.  
 Solo—Piper McFarlane (encored) by Wilfred McDonald.  
 Recitation—Santa's Fright, by Mildred Coady.  
 Duet—Christmas is Coming, by Marie McDonald and Bernice O'Keefe.  
 Recitation—The Christmas Birthday, by Cecelia Currie.  
 Solo—The Prisoner's Sweetheart, by Eveline McNeill.  
 Recitation—Canada Be Strong by Jean Carver.  
 Violin selection by Mr. B. B. McDonald.  
 Recitation—Soap the Oppressor, by Wilfred McDonald.  
 Chorus—Jingle Bells by School.  
 Recitation—Santa Nearly Ready, by Alice Coady.  
 Recitation—Thy Mother, by Eveline McNeill.  
 Solo—If I Only Had a Home Sweet Home, by Jean Carver.  
 Dialogue—Uncle Harrow's Cold, by 7 pupils.  
 Recitation—The Child World, by Margaret Currie.  
 Chorus—Little Children Can You Tell, by 5 girls.  
 Recitation—When Pa Was a Boy, by Gordon Lea.  
 Duet—Santa Claus is Coming, by Eveline McNeill and Bernice O'Keefe.  
 Christmas Remembrance by Lona Carver.  
 Carol—Holy Night, by 4 girls.  
 During the evening the pupils were treated to ice-cream by Mrs. Tweedy.

After the program Santa Claus, arrived with gifts for all and a very successful concert was brought to a close with the singing of the National Anthem.

**Kidneys Need Lots of Water at Times**  
 Most folks forget that the kidneys, like the bowels, sometimes get sluggish and clogged and need a flushing occasionally, else we have backache and dull misery in the kidney region, severe headaches, rheumatic twinges, torpid liver, acid stomach, sleeplessness and all sorts of bladder disorders.

You simply must keep your kidneys active and clean and the moment you feel an ache or pain in the kidney region begin drinking lots of water. Also get about four ounces of Jad Salts from any good drug store here, take a tablespoonful in a glass of water before breakfast for a few days and your kidneys will then act fine. This famous salt is made from the acid of grapes and lemon juice, combined with lithia, and is intended to flush clogged kidneys and help stimulate them to activity. It also helps neutralize the acids in the urine so they no longer irritate, thus helping to relieve bladder disorders.

Jad Salts is inexpensive; makes a delightful effervescent lithia water drink which everybody should take now and then to help keep their kidneys clean.

A well-known local druggist says he sells lots of Jad Salts to folks who believe in trying to correct kidney trouble while it is only trouble.

**NEW LONDON AND VICINITY**  
 Bridal shower—The home of Mr. and Mrs. John D. MacKay, New London was the scene of a pleasant event on Monday evening, Jan. 23rd, when the friends of Miss Jean MacEwen assembled to give her a surprise in the form of a shower prior to her marriage to Mr. Willard M. Riley. About 9:30 the bridal party entered the drawing room. The bride being Mrs. Lorne MacEwen, the groom Miss Evelyn Anderson while Miss Margaret Anderson acted as bridesmaid and Miss Florence MacKay as best man and Mr. Cyril Horton performed the marriage ceremony. The package which consisted of real wedding gifts were opened by the bridesmaid Miss Margaret Anderson and presented to the bride and groom by the best man Miss Florence MacKay read the comical verses attached to each which caused much hearty laughter. Miss MacEwen in a few well chosen words thanked all her friends for the nice gifts she had received. After which a dainty lunch was served by the ladies. The remainder of the evening was pleasantly spent with music. The many friends dispersed to their homes wishing Miss MacEwen many years of joy and happiness.

**KINDLY REMEMBERED**  
 A pre-nuptial shower was held in honor of Miss Mayme McDougall, Richmond, on Friday night, Jan. 27th at the home of Mr. and Mrs. Joseph R. McIntyre, Cross Rivers.

**ENGLAND IS BEHIND IN AFRICAN MATCH**  
**JOHANNESBURG, South Africa, Feb. 3.**—England faces defeat in the fourth cricket test match of the present tour of the South Africa team in progress here. Scores at the close of play today, the third day, were:  
 England, 265 and 215.  
 South Africa, 328 and 55 runs for one wicket.

The South Africans have thus only 98 runs to make to win and they have nine wickets in hand. England played their second innings today and their batsmen made runs very slowly, as the bowling of the South Africans on a fast wicket was deadly.

**SCARLET FEVER LEFT HER WITH KIDNEY TROUBLE**  
**NOVA SCOTIA LADY HIGHLY RECOMMENDS DODD'S KIDNEY PILLS**  
 Mrs. E. Young Suffered Untold Agony From Her Kidneys

Halifax, N. S. Feb. 3 (Special)—"I can truly recommend Dodd's Kidney Pills to anyone suffering from kidney troubles," writes Mrs. E. Young, who lives at 101 Barrington Street. "When I was a girl of fourteen I was stricken with scarlet fever. On recovering it left me with kidney trouble. I suffered with untold agony. Doctors' medicine was of no avail. I could not walk. A neighbor said: 'Why not try Dodd's Kidney Pills?' My adopted parents got me some and I took three boxes. I found relief and have not been troubled since. Any and all who suffer with their kidneys as I did should use Dodd's Kidney Pills. I always recommend them when I hear of anyone suffering from pains in the back caused from kidney trouble." There is no reason why anyone should continue to suffer when Dodd's Kidney Pills can be obtained from druggists everywhere, or The Dodd's Medicine Co., Ltd., Toronto 2.
