**THE SECRET OF CRISP PASTRY**  
Keep three things in view, if you want unvarying success with your pastry—cold water, good shortening and Blended flour. Ice water and butter are desirable, but it may be more convenient to use cold water and some other good shortening. But stick to the Blended Flour. It will never fail to give a light, flaky crust, so tender it will break with a breath, and as easy to digest as it is delicious.

The wholesomeness of pie crust depends on the lightness of the flour—that is the crisp flakiness that you look for on pie crust must be made of flour having a large percentage of starch. Ontario fall wheat contains all the requisites for light pastry, cake and biscuits, while Manitoba wheat has the heavier properties required in a strictly bread flour.

Combine the two, and you will get a perfect flour, that has the full rich flavor and delicacy of Ontario fall wheat, and the strength of Manitoba spring wheat—an ideal combination.

With ordinary care in mixing and rolling the dough, Blended flour will give you the most delicious pastry you ever ate. Many millers are now blending these two grades of flour scientifically, so do not attempt to do the blending yourself—it is no easy thing to get just the right proportions.
