Also on same day the following crop, stock, and farming implements: STOCK—One mare 7 years (Parkland), one horse coming 4 years (Parkerdee), one filly coming 3 years (Parkerdee), one Jersey cow due to freshen November 25th, one Short-horn cow due to freshen April 1st, one Jersey cow due to freshen May 4th, one steer 1 year old, one brood York sow, six fall pigs 2 1/2 months old, 40 choice laying hens.

TERMS—All sums of \$5 and under over that amount twelve months credit on approved joint notes. Six per cent off for cash.

WILLIAM H. MASTERS, Proprietor. J. A. McDONALD, Auctioneer.

HERE GLANDS ENTER THE CONVERSATION

They used to say, and maybe they say it yet, that a man is as old as his arteries. If the news from Paris is confirmed they will say hereafter that a man is as old as his glands. Dr. Serge Voronoff, a famous investigator of ductless glands reports an experiment which resulted in restoring the youth of a patient aged 80 by grafting upon him the interstitial gland of an ape. Later on the scientist protested that he had been misunderstood by those who assumed that he had discovered a way of prolonging life. He had merely given to greybeard the vigor and energy of a man of thirty. He may die at his allotted time, which may be next year, but he will die at least feeling that he has recaptured his lost youth, and not totter senilely to the tomb. Nevertheless, the discovery may be of the utmost importance, not only because it will renew the youth of men long past their prime, and make them modern Abrahams in point of vigor, but because it will turn the minds of thousands of investigators to the great mystery of the ductless glands of the human body, which appear to exercise such a marvelous and mysterious influence upon our health and even upon our mind and character. Attention has thus been directed in the past, but with somewhat confusing results.

The Harvey of the Glands.

The pioneer with regard to the function of these mysterious glands was Dr. Charles Edward Brown-Segard, a British physician who practised for some time in New York, and went to Paris to take the chair of experimental medicine in its greatest university. He made many brilliant experiments which laid the medical profession under a lasting debt, and may be said to have been the foundation of what ever edifice in the future may be reared upon the glands of the body. Unfortunately he was misunderstood, and some unscrupulous exploiters seized upon some of his theories to sell nostrums said to have been prepared from the glands of sheep and which were guaranteed to lengthen human life. These turned out to be worthless, and Dr. Brown-Segard died broken hearted, feeling that he had been disgraced. Subsequently an investigation was made by the Smithsonian Institute and it was officially reported that Dr. Brown-Segard had no part in the effort to commercialize his discoveries. He was a devoted man of science whose name may be remembered in the future when glands are discussed as the name of Harvey is recalled when the circulation of the blood is mentioned.

Mysterious Glands.

Now to explain about the glands. There must be necessary limitations to this explanation, because the glands in this respect recall the aurora borealis. A student was once asked by his professor to explain the theory of the northern lights. He said that he understood all about them, but at the moment he appeared to have forgotten them. Whereupon the astronomer observed that it was unfortunate that the only man in the world who had ever known all about them should have forgotten it. The chief function of the glands appears to be to secrete from the blood certain elements and manufacture them into chemicals upon which the health of the body depends. How they do it, or what is exactly the character of their product is unknown. Somebody has described the interstitial gland as a sort of fuming cap, in its power to cause a burst or explosion of energy. Very mysterious are the forces dealt with. We know that if one gland is removed the person or animal dies. We know

that if another gland is removed the result is a stoppage of all growth. There is an instance of a dwarfed and semi-idiotic child with a defective gland being nourished with extracts from a similar gland obtained from slaughtered animals, the result being that in a few months the child was normal.

Other Well-known Glands.

The interstitial gland, which was the gland grafted by Dr. Voronoff, is a tissue which is the matured part of the male gonads and with other glands has a marked influence in the determination of the secondary sex characteristics. It is a mere thin fibre or strip of cells, and of all the glands in the body is supposed to be the one that is a veritable dynamo. Hitherto the thyroid gland has been the most frequent subject of experiments. It is situated in the upper chest. Its undue enlargement is called goitre, and it is said to govern growth. Experiments have been made upon sheep, which proved that if the gland were removed all growth stopped. It was a defective thyroid gland that caused the semi-idiotcy of the child mentioned earlier. The pituitary gland, situated in the brain, is supposed to control stature. Other important glands are the suprarenals, above the kidneys, the pancreas, corresponding to the sweetbread in animals, and the pineal gland, which is located in the brain.

The Human Drugstore.

All have some tremendously important work to do in the development of the body and the general health though what exactly they do and how they do it remains for the future to disclose. What we do know fits in with the theory that the body is its own drugstore, and contains within itself the medicine that it requires. When illness occurs it means that some of the paths to the drugstore are closed or that some of the drugs, in consequence of an unusual run, have been depleted. The wise physician, therefore, tries to remove the obstruction to the store or replenish the drugs. He does not introduce anything absolutely foreign in the sense that it was never before, handled in the store like a lawn mower, but something that is simply out of stock, like alcohol. The glands appear to be the chemists. They snatch from the blood the essence of a raisin, a flake of yeast and a grain of sugar and produce a vintage of '33. Apparently the gland of a sheep will work as well in the human body as the original gland. It is like a new valve or tire, the only difference being that it is bought at a different store, having come out of the old original factory of Mother Nature, Unlimited.

If you have committed iniquity, you must expect to suffer; for vengeance with its sacred light shines upon you. —Sophocles.

A ROYAL WEDDING

LUXEMBURG, Nov. 7.—The marriage of Grand Duchess Charlotte and Prince Felix, of Bourbon Parma, was celebrated at the Cathedral today.

SOLDIERS' CIVIL RE-ESTABLISHMENT.

If any there be who cast doubt upon the value of Western Canada's contribution in manpower to the great war, a glance at the number of veterans who have returned for placement and of those who wear the badge of service throughout every province, must bring speedy reassurance. As conductors on the trains; in the offices of hotels; on the station platforms; in the stores—everywhere; one meets the men who helped finish the war, and following closely along the steady stream of men back to the west, are the activities of the Department of Soldiers' Civil Re-establishment.

Where the men penetrate, offices of the Department are set up to look after their needs, and a very present help in time of such need they have proved, as one man told.

He enlisted from the middle west, knowing nothing of opportunities far there on, but in returning the fancy struck him to move westward and set into some outdoor industry other than farming. "I had not any notion of applying at an employment office," he said. "In fact, I just thought I would strike out on my own. However, I happened to hit a little place a few miles east of Nelson and things were pretty quiet there. I did manage to land an odd job, but nothing steady, and then someone told me that the Department had an office for information and employment at Nelson. Say! I was glad to hear that. I went on, and within a few hours after arrival got a place in a mining centre."

This story is typical of what is being done along the route, from Halifax to Vancouver, and the spirit of optimism in the western towns and cities, particularly in those districts where the harvest has failed, is an inspiration.

At Medicine Hat 217 men have been placed in employment. Seventeen are training in industries.

At Lethbridge a good spirit of cooperation exists between local employers and the office of the Department of Soldiers' Civil Re-establishment.

Through the activities of the official

CASTORIA

For Infants and Children In Use For Over 30 Years Always bears the Signature of J. C. Watson

in charge, the civic authorities have pledged themselves to give preference to returned men. In one civic department alone 14 veterans have been placed. During the first six weeks this office was in operation 22 men were placed for training in industries. Three are taking courses at business college. Two have gone to High School, five are learning vulcanizing, two oxy-acetylene welding, one she repairing, one in power house of a local coal mine, one plumbing, one learning baking and one linotype operating.

Premier Hughes Appeals to Electors

MELBOURNE, Australia, Nov. 4.—(Reuters)—Premier Hughes in opening the general election campaign reminded his hearers that he was exiled from the Labor Party because in response to the Imperial Government's appeal in 1916 for more recruits he had submitted the question of compulsory service to the people. The people would now choose whether they wanted to be governed by men who denounced and vilified him and others in 1916 because they refused to be their tools, and also throughout the darkest days of the war, hampered every effort to achieve victory, or by those who had kept their pledges and placed the honor of the country high above party consideration.

Premier Hughes said that the Labor party not only opposed conscription but had hampered voluntary enlistment, and even when the foe was within striking distance of Paris and menaced the channel ports they babbled about peace by negotiation. Referring to high prices he said

the only remedy was to increase production and reduce their paper currency. Work, and work alone and safe finance could save them. A Royal Commission was being appointed to report on profiteering and the electors were asked to give by the referendum increased powers to enable profiteering and monopolies to be dealt with by Commonwealth legislation. These powers if granted would not be used to scrap state industrial legislation or the courts, but only to supplement them when necessary.

The world was everywhere in a ferment and Bolshevism must be quashed. Bolshevism was advocated by the I. W. W. and the One Big Union, but the Government stood against it. Industrial unrest could not be settled by tinkering with surface industrial problems. They must be prepared to do justice to the workers, nothing less would serve, they must devise better methods for insuring a basic wage than now exists, and means must be found to adjust the minimum wage automatically, or near by so, to the cost of living.

BETTER ONES NEXT YEAR PERHAPS

Mother: "Willie, didn't I say I'd whip you if you put another rubber button on the stove?" Willie: "Yes; but tain't me this time, ma. It's pa smoking one of them cigars you bought for him Christmas."
