STOP MACHINE - Gun I heard German machine-gun fire and then there was the crump of a mortar. The machine-gun stopped. Occasionally I got a glimpse of Canadians advancing on foot, crouching as they crept through the ground which gave them fairly good cover. The German gunners didn't even see them. The Canadian and British gunfire. There was not a peep out of the German artillery all afternoon and no counter-battery work. The Canadians possessed all the high ground overlooking the battlefield and the Nazis had no observation posts to spot our gun posts, visually at any rate. Light bombers and fighters twisted high over the advancing Canadians and there was some bombing and strafing in the area behind the Germans. I did not see any close support from the air.
