Expert Opinion On U.S. Business Outlook Varies

WASHINGTON, June 12 - (CP) - Expert opinion on the future meaning of recent reports of climbing unemployment and falling business in the United States range from optimism to gloom.

Most optimistic are Government officials, inclined to view the slump as the end of inflation rather than as the start of recession.

Some private economists, especially in universities, take the same long-range view and stress factors that support the general economy.

But, in general, the closer you come to the public the gloomier are the predictions.

Manufacturers are likely to say production will go down the rest of this year, pick up in early 1950. Business men say the buying public is balky and the manufacturers unrealistic in maintaining prices.

Some New York Stock Exchange brokers say the start of depression is here - but Wall Street has been discounting a recession for three years and the brokerage business has been in a slump right along.

Politicians are wary of guessing the political effect of a genuine economic slide.

Republicans think it would hurt the Democrats - if it didn't go too far. But they remember that Franklin D. Roosevelt made political capital of his pump-priming program. For that reason they would try to put the administration of any relief program in the hands of states.

Government farm officials say they see little likelihood of a sharp over-all drop in food buying in the near future, nor a long-range drop in pre-war levels.

What might have been more serious, occurred the other evening. While Mr. Edward Lowther was returning from the field, with a team of horses attached to a cultivator, he stopped to close a gate and the steeds became frightened, running pell-mell out of the yard, and down the road a considerable distance. Mr. Lowther overtook them with his car.

At the close of trading Friday the general level of prices was the lowest since May, 1947—and a mere trifle above a five-year low.

In mid-week an attempt was made to halt the slide but the effort was feeble at best. A couple of days of comparative stability resulted more from a let-up in selling pressure than a revival of demand.
