**PASTURE HAY TURNIPS**

Outstanding results have been obtained by using our fertilizers on PASTURE and HAY fields as well as on other crops.

Experiments have shown that the best time to apply fertilizers on pasture and hay fields is in early Spring, as soon as the ground has firmed enough to work on.

If you have not tried our pasture and hay fertilizers do so this year. We have them in stock ready for you.

And why have BROWN HEART in your TURNIPS. Experiments show that brown heart can be much controlled through the intelligent use of Borax. We have in stock a turnip fertilizer, a 2-12-6 fertilizer, containing a suitable quantity of Borax for this purpose. Do not fail to use it.

We can give service and quality superior to what you can obtain elsewhere.

\*This column is reserved for news of local interest but advertising of a heavy nature may be inserted at 2 cents a word strictly payable in advance.

\*SUBSCRIPTIONS to The Charlottetown Guardian may be handed to their Rept. Archie Hume, Phone 47, or left at H. J. Mabon's.

\*SOCIAL GATHERING—Mrs. R. W. Stewart, Montague, entertained the members of the United Church Ladies' Aid at her home on Tuesday evening. After a short business meeting, which opened with the singing of "What a Friend We Have in Jesus," an enjoyable program of vocal music was given by Miss Vivian Armstrong, Mrs. Harry McGregor, Mrs. R. K. Clements, Mrs. L. H. Poole, Mrs. C. V. Viersen, Mrs. James McLaren and Miss Alva Brehaut. Readings by Mrs. Sydney McLean were much appreciated. Contest prizes were won by Mrs. R. K. Clements for drawing, Mrs. G. C. Pringle for sewing and Mrs. A. Hume, Poetry. The hostess was assisted in serving refreshments by Mrs. W. McLean and Mrs. H. J. Mabon.—H.

\*FURTHER PARTICULARS—When the fire alarm rang through Montague on Sunday afternoon shortly before three o'clock, it put to rest the Annual Parade which the Oddfellows were forming up in front of their Lodge previous to their service which was to be held in the Christian Church. The fire, which occurred close beside the Imperial Fox Ranch situated about a quarter of a mile above the Bridge on the South side of the river, looked quite serious for a while. Had it not been for the prompt and untiring efforts of Fred Vuozzo, who was early on the scene, great damage and loss of valuable property would have resulted. Others arrived and worked hard to get the fire under control and succeeded just as the fire reached the guard fence. The Boy Scouts of the First Montague Troop were some of the first on the job and did splendid work. They afterwards volunteered to stay and watch the smouldering fire as long as it was necessary. The Imperial is a large ranch and is under the care of Mr. Marshall Reynolds. Mr. L. H. Coffin's Fox Ranch and Residence are in the near vicinity. Fire was of unknown origin. Although it may have been caused by spontaneous combustion nevertheless it is a warning to those who carelessly throw away lighted matches and cigarette butts.—H.

\*Friends of Mrs. Cameron McClure, Montague, will regret to hear of her illness.—H.

\*Miss Rita McLean, nurse in training at the Jeffrey Hale Hospital, Quebec, is spending her holidays with her parents, Mr. and Mrs. Will McLean, Montague.

\*Mr. George Roberts of Ottawa is a guest at the MacDonald Hotel, Montague.—H.

residence on Wednesday. May 1st. Rev. Mr. Williamson of Malpeque spoke words of comfort to the bereaved, he was assisted in the service by Rev. Mr. Rhoad of Kensington. The favorite hymns of the deceased were sung. The pall bearers which were chosen by the deceased were: Walter Croken, Bert Croken, Earl Taylor, Alex. Douglas, Layton Stewart and David McNally. Interment was in Summerfield cemetery.

**King Escaped Death Twice At N.S. Port**

HALIFAX, May 9.—(C.P.)—As King George looks back over his reign of 26 years Halifaxians are recalling how he twice escaped death during visits to this city in his youth. But for the vigilance of Halifax police and the prompt action of a young mariner His Majesty might never have ascended the throne. Assassination and accidental drowning were the fates he avoided here.

While preparations for the jubilee anniversary were nearing completion, Nicholas Power, former chief of police, still erect and alert at the age of 91, told the story of a sensational dynamite plot involving the then Prince of Wales when he first visited Halifax in 1883 as a "midship-mite on H. M. S. Canada. In searching the luggage of two strangers following reported robbery Power found 48 pounds of dynamite. "Dynamite" fairly new to Nova Scotia at that time and this was an American make of the strongest type," said the aged ex-sleuth. "I questioned the two men as to why they were in possession of the dangerous explosive and their replies were unsatisfactory. I brought them to the police station, locked them up, and while searching them found in one pocket a baggage check for effects at the North Street Station.

"Taking possession of this I discovered to my amazement that the bag contained a rubber diving suit, two saved-off revolvers and a quantity of caps, iron hooks and other articles of the type used in setting off a charge of dynamite. Further investigation revealed that the two men had hired a boat and surveyed the Canada from close range. The only charge police could bring against the two United States citizens James Holmes and William Breckton, was that of having dynamite in a hotel, and they were sentenced to six months in prison while the 18-year-old Prince George was sent to the West Indies as a precaution.

"After the men were released from prison," said Power "one of them was reported to have said that they 'came here to blow up the Canada with the blooming little prince on board,' and there is no doubt in my mind that this is exactly what they had in mind. Death by accident threatened the young prince, then Duke of Cornwall and a sub-lieutenant, when he next visited Halifax on the Canada. Returning to the ship with other officers, after an elaborate social function, he was shoved overboard from a small boat and in the darkness none of his companions noticed the disappearance.

The splash was heard by the late John J. Mulrooney however, and he made a rescue, finding he had saved the royal heir. At that time Mulrooney was well known as a "bum-boat" runner, indicating a type of craft operating under naval permission and carrying supplies for sale to men aboard the warships. Mulrooney's clothes were ruined by the water, so the prince gave him one of his uniforms. After George V became King he presented the Halifax man with a gold watch.

When the present Prince of Wales visited Halifax in 1919 he ordered out a special rescue boat from His Majesty's summoned Mulrooney aboard the H. M. S. Renown and was host to Mulrooney's entire family at dinner on the warship. The Prince also invited the family to a ball at Government House.

**JUBILEE DAY IS MRS. DIONNE'S BIRTHDAY**

(C.P. by Guardian's Special Wire) CALLANDER, Ont., May 8.—The Dionne quintuplets celebrated the King's Silver Jubilee and their mother's 28th birthday today by taking an airing outside their private hospital. Marie, Emilie and Annette gained weight as they reached the age of 11 months and eight days. Yvonne lost half an ounce and Cecile remained unchanged in weight. Visitors who came out to the Duff Hospital yesterday and today were turned back by the "no visitors" sign which is expected to be up for a week.

**FOR SOUR STOMACH AND INDIGESTION**

Don't suffer from after-eating discomfort. Eno's Fruit Salt will soothe your right. Eno neutralizes the acid condition and sweetens the stomach almost like magic—safely!

And more—Eno gets at the root of the trouble and prevents recurrence. It regularizes intestinal activity, keeps the regulative tract free from poisonous waste.

A dash of Eno in a glass of water, morning and night, soon normalizes and revivifies the entire inner system. Doctors recommend Eno and take it themselves because they know it's safe! Eno acts gently, effectively, forms no habit. Handy size, 50 cents. Household size, 85 cents. \*Phone the druggist now.

**A Useful Household And Farm Spray**

A very useful spray for destroying insects in dwellings and farm buildings may be easily and cheaply made from pyrethrum insect powder and kerosene. According to the directions of the Entomological Branch of the Dominion Department of Agriculture the spray is prepared by adding one-half pound of pyrethrum to one gallon of kerosene, allowing the mixture to stand and agitating it at intervals over a period of about two hours, or longer, thus ensuring that particularly all the active principle of the pyrethrum is dissolved. The residue of the pyrethrum settles to the bottom of the vessel as a brown sediment, and the clear liquid, which is pale lemon-yellow in colour, may either be syphoned or filtered-off.

When the spray is required for use in farm buildings it may be prepared satisfactorily with ordinary kerosene and it is unnecessary to add any other chemicals. For household use, however, to remove any possibility of staining fabrics or furniture, water-white kerosene should be used and, in order to impart a pleasant odour, methyl salicylate of oil of sassafras may be added at the rate of two or three fluid ounces to each gallon. The spray should be kept in a tightly corked container to prevent its deteriorating in strength, as the active principle of pyrethrum easily evaporates. For use against bedbugs the addition of about one-half pint of creosol to each gallon of spray increases its effectiveness. The spray should be applied in the form of a fine mist by means of a small hand sprayer.

There are a number of proprietary fly sprays on the market similar in composition to the one described above, which may be substituted for it by those who wish to avoid the trouble of preparing their own spray material.

**Free Gardening Information**

As a result of more than half a century of actual experience and experiment by the Dominion Department of Agriculture, a storehouse of information on every phase of gardening is at the disposal of every member of the Canadian public who wishes to take advantage of this knowledge. How to grow shrubs, trees, flowers, and vegetables, how to protect them from diseases and insect enemies, how to attend to the soil, and a thousand other things connected therewith are dealt with in plain language. Year by year hundreds of bulletins, pamphlets and circulars are distributed free to persons who write and ask for them from the Publicity and Extension Branch of the Department in Ottawa. In this way Canadian gardeners, professionals and amateur, are helped to maintain a high degree of horticulture.

There are circulars or bulletins on spring and fall work in the rose garden, flowers for the prairie home, the growing of peonies, gladioli, dahlias, ferns, carnations, the canna, (a sub-tropical plant for formal garden beds and borders) growing caragana for field shelters and hedges, tree planting for ornamental purposes, how to make hotbeds and cold frames, grapes for home use, mushroom culture, how to grow tomatoes, asparagus, cucumbers, potatoes, any know vegetable in short, and how to make sketch for a proposed shelter belt, just to mention a few.

The cultivation of the apple in Canada, hedges and their uses, the Prairie farmer's vegetable garden, vegetable growing in the coast area of British Columbia, cabbage flies and their control, cabbage flea beetle, crown gall in fruit trees and small fruits, the understore pest, the earwig, onion maggot control, gladioli thrips, diseases of the strawberry potato and tomato, the garden and pest control are fully dealt with and may be obtained free by writing to the Publicity and Extension Branch, Dominion Department of Agriculture.

**Preserving Eggs In The Home**

As the result of many years of investigational work on the preservation of eggs for household use carried out by the Dominion Department of Agriculture, two preservatives, (1) lime-water and (2) "water-glass" have been proven eminently satisfactory and distinctly superior to the large number of preparations tested.

Lime-water is prepared by slaking burnt quick lime, in the proportion of one pound to five gallons of water. The mixture should be well stirred. The lime-water may be used as soon as made without allowing it to settle or it may be left for

Property needs protection!

**SWP PROVIDES LONG-TERM PROTECTION!**

SHERWIN-WILLIAMS Paint is your best insurance against property depreciation. The test of over fifty years' service has proved beyond question that it stands up to the severe rigours of our Canadian climate. The colours stay fresh and clear. The protective film is tough and remains tough—doesn't chip, peel or crack—with the result that a Sherwin-Williams job lasts two to five times as long, besides looking better from the start.

Per year of life, SWP is the most inexpensive paint you can buy. It actually costs less on the job, too, because of its great coverage—over 850 square feet per gallon! Visit "Paint Headquarters" for all your painting requirements. Below we list three Sherwin-Williams products you ought to know about.

- "THERE IS NO SUBSTITUTE FOR QUALITY"**
- SWP** For buildings, outside and inside. Leads all others in quality. Saves your property and spares your pocket. Covers more surface; saves labour in applying; lasts for the longest time. 32 popular shades.
  - MAR-NOT FLOOR VARNISH** Beautifies and protects hardwood floors or tile: Easily applied. Dries film-hard overnight with a brilliant, transparent lustre that enhances the natural beauty of the flooring. Waterproof and practically scratch proof.
  - ENAMELOID** The only guaranteed enamel for inside and outside use. Sets sensational new standards of easy application and long-lasting toughness: Flows on easily and levels out into a smooth, even film of amazing durability.

an hour or so and the clear upper liquid poured off from the deposit of undissolved (excess) lime. If quick-lime is not available, slaked lime (hydrated lime, as used in the preparation of Bordeaux mixture, may be used. The eggs to be preserved should be placed in a crock, receptacle, and covered with the lime-water. They should be stored in a cool place, with the top of the receptacle completely covered.

"Water-glass" is a well-known preservative, chemically designated silicate of soda, and is readily obtainable at drug and grocery stores in either liquid or solid form. It is readily soluble and no special directions for preparing the preservative solution are necessary. At the same time, the results of the tests showed that lime-water was the superior preservative, the eggs on breaking showing less discoloration of the white and more globular yolks. Only perfectly fresh eggs should be used for preservation and the eggs should be completely immersed all the time until required for use. In storing, a temperature of 40 to 45 degrees Fahrenheit assists materially in retaining good flavour.

**COVEHEAD W. L.**

The regular meeting of the Covehead Road Women's Institute was held at the home of Mrs. John Berrigan on May 2nd. With thirteen members and nine visitors present

Meeting opened by singing the Institute Ode. Roll call was answered "by" paying according to size of your shoe, which amounted to one dollar. Minutes of last meeting were read and adopted. Reports of committees were heard. Correspondence was read and discussed. A donation was given to Mrs. Harry Birt, Next Dolly Ready. Meeting to be opened by singing the "Institute Ode." Roll call is to be answered with a "Question Box." Meeting closed by singing the National Anthem. A dainty lunch was served by the hostess.

**The Management Of House Plants**

In the management of plants in the home there are many points that call for attention. Sometimes a lack of food. In that case, so long as plant does not grow well because of the roots have not become bound there is no need to re-pot the plant. Instead, re-potting would cause a needless check to its growth, and the best thing to do is to scrape away the surface soil down to the roots and replace by a rich soil containing 25 per cent of ground bone. Correct watering is also an important procedure. Provided the plants have proper drainage, water should be applied until it runs through the bottom of the pot. Too frequent watering is often a cause

of non-success because the water wets the soil so much that the air cannot pass through the mould or earth. To provide proper drainage, the hole at the bottom of the pot must not be clogged up. Small pots need not have the hole shielded at need, but larger pots, say, all pots over four-inches wide at the top, require pieces of broken pots or pebbles placed in the bottom and covered with sphagnum or rough sod to prevent the soil from washing down and choking the ventilation by filling up the spaces between the broken pieces.

Air in the average home is usually dry, a condition particularly inviting to the red spider. Dryness may be decreased by evaporating water in the room and by spraying the foliage of the plants on bright days. Thick-leaved plants may be sponged with water containing

whale oil soap. On pleasant days the plants should get as much as possible. At night plants do best in a temperature ten to fifteen degrees lower than they need during the day. Most species used as house plants require no more than fifty or fifty-five degrees Fahrenheit during the night and they will not suffer injury if the thermometer falls to forty, although such a temperature maintained over a long period of time would check growth.

**HALL CAINE AIRPORT**

DOUGLAS, Isle of Man, May 1 (C.P.)—Established by G. R. Hall Caine, M.P., and Sir Derwent Hall Caine and named after their late father, the famous novelist, an airport was opened at Ramsey recently.

**Are Your Nerves on Edge?**

Does the least bit of noise bother you? Do you often feel that you simply can't do another tap of work? Do you have dizziness, faintness and weakness? Don't get the idea you can't get relief. Of course you can! Let Milburn's Health and Nerve Pills soothe your nerves, renew your health and vigor and make life worth living again. By all means, try this time-proven remedy now.
