THE SNAPSHOT GUILD SILHOUETTE PICTURES. Outdoor silhouettes are easy, with sun behind subject. Indoors, with artificial light, they are just as simple. SILHOUETTES offer many chances for interesting, decorative pictures—and are easy to take, indoors or out. Outdoors, place your subject on high ground, with the sun squarely behind him, and shoot from a low camera position. Use a smaller lens opening than usual, to provide less-than-normal exposure and to subdue shadow detail. Indoors, there are two simple methods. For one, use a large-size photo bulb in cardboard reflector. Place it on the floor a few feet from one wall, and pointed toward the wall. This creates a "bright spot." Darken the rest of the room, let the subject stand in shadow between the camera and bright spot—and shoot. Another method permits unusual silhouettes. For this, stretch a white sheet smoothly across an open doorway, leaving no wrinkles. Place a strong light—such as a photo bulb in reflector—five feet behind it. In the other room, pose your subject about two feet in front of the brightly illuminated sheet and fire away. With the sheet, novel effects are possible. For example, you can show a person juggling any number of tennis balls or bottles, with most of them in mid-air. Actually, they are just cut out of black paper and pinned to the sheet—but in the picture they look quite real. Exposure time for silhouettes varies with the strength of the light. With a box camera and an large photo bulb in cardboard reflector, try "time" exposures of one to three seconds. Keep the camera on a firm support, and be careful not to move it during exposure. Usually, silhouette subjects should be shown in profile. The room in which the camera is used must be kept as dark as possible. Anyone can acquire the knack of silhouette-making, and it is great fun to work out story-telling ideas for this type of snapshot. Try some, and you'll find they offer delightful pastime for the long evenings. John van Guilder 218
