HUDSON'S BAY GRANT FROM PRINCE RUPERT COMING BEFORE COURT

Question is Whether it Was Intended that Hudson's Bay Company Should Own Minerals Within its Blocks of Settlement Land.

OTTAWA, Ont., Feb. 7. —Before the Supreme Court of Canada within the next few weeks a faded old grant of Canada's Northland will come for interpretation. It dates back to the gay days of the Restoration in England. It is the instrument under which Charles the Second granted to that dashing cavalier Prince Rupert and his company of gentlemen adventurers (which became the Hudson's Bay Company) such sweeping powers in and around Hudson's Bay. They had right to govern and administer. They had sole rights of trade. They had the Royalty of the Sea. They had—and here lies the point for the Supreme Court to decide—"all mines royal, as well discovered as not discovered of gold, silver, gems and precious stones, to be found or discovered within the territories, limits and places aforesaid." And the Company was granted the lands themselves to be held, as the old formula has it "as of our Manor of East Greenwich in our County of Kent in free and common soccage and not in capite or by Knight's service; yielding and paying yearly to us, our Heirs and Successors for the same, two Elks and two Black Beavers whensoever, and as often as we, our Heirs and Successors, shall happen to enter into said countries, territories and regions hereby granted."

Now one year after Canada became a Dominion, an Act was passed which provided for the taking over of Canada of Rupert's Land as the great Hudson Bay territory had come to be known. And in the following year, the Hudson Bay Company surrendered its rights of government "and other rights, privileges, liberties, franchies, powers and authorities" granted by its charter. It was provided that the company, in return, would:

Retain all its posts and stations in Rupert's Land, or any other part of British North America.

The company was empowered, within twelve months after the surrender, to select a block of land adjoining each of their posts, in accordance with a schedule setting out the acreage.

Within fifty years after the surrender, to claim one-twentieth part of land set out for settlement. Now comes the point for the Supreme Court to decide, and it is two-fold; When the Hudson's Bay Company surrendered its rights of government in Rupert's land did it retain ownership of the minerals in the blocks of land which it retained about its posts? Further, when the Hudson's Bay Company selected its one-twentieth of settlement land did it assume with that land, ownership of any precious metals therein?

These are the questions for the Supreme Court to decide. The Government of Canada asserts that the company having surrendered its charter rights in Rupert's land, it surrendered any rights to precious metals, that ownership of the precious metals was not granted with the settlement land. The company on the other hand, conveys to the Crown, the "land granted." But does not contain apt words to convey the "mines royal."

Baldwin and Wales Expected Early In August

(Canadian Press)

OTTAWA, Ont., Feb. 7. —Rumors that the Prince of Wales and Premier Stanley Baldwin would attend Dominion Day celebrations in Canada have been denied both from London and Ottawa.

Misleading despatches sent out some time ago apparently gave rise in some quarters to the idea that they aimed to be here before July 1. This was never officially understood in Ottawa, it is stated, and the expectation now is that they will reach here early in August.

One of the principal functions they will attend is the formal opening of the international bridge across the Niagara river at Fort Erie-Buffalo, the scene of historic fights in early days.

PERSONALS

Miss Stella Brennan, Tignish, is visiting in the city, the guest of Mrs. Ray Praught.

Mr. Philip Noonan, manager of the Provincial Bank, left yesterday afternoon for his home in Bedeque called there on account of the serious illness of his father.

Mr. Hammond J. Ince of Victoria was in the city yesterday on his way to Uigg.

The many friends of Miss Olive Ritchie, who was operated on at the Prince Edward Island Hospital on Saturday last will be glad to know she is progressing favorably.

Mrs. B. C. Cox, City and Miss Laura leave this morning on a visit to Montreal.

Mr. Nelson S. J. Murray, Fredericton was a visitor to the city yesterday.

Germans have built a motorcycle side car that consists of a dark room in which photographs can be developed while photographers are returning from taking pictures

To smother fires with foam a mixing machine to be connected to a line of hose has been invented a powder poured into it producing the foam on contact with the water.

Experiments in Europe in the introduction of phenol compounds into the fuel of Diesel engines have resulted in reduced corrosion and improved lubricating conditions.

Minard's Liniment for chapped hands.

A Warning to Autoists

(By W. L. COTTON)

In the drowning of two men at the end of Southport wharf, and in the conviction of two other men who were guilty of negligence when in charge of an automobile for the crime of manslaughter, there is a dreadful lesson—a lesson never to be forgotten—for all persons who drive motor cars. It is now known by everyone that negligence, which results in the death of a human being is one of the greatest of crimes, and that law and justice demand the punishment of those who have been found guilty of it.

The fact should be borne in mind by those who are in the habit of driving their cars fast and furiously. Every prudent person—man and woman alike—has always been careful—particularly careful—when guiding and directing a motor car. But there are persons who take pleasure "in going fast," even in the face of laws, rules and regulations. Such persons will, it may now be hoped, be more careful in the future than in the past, for they now know that they are liable to pay the cost of any mishap that may occur as a result of their carelessness or negligence; and that, if their carelessness or negligence, or breach of the laws governing auto traffic, should cause the death of any person or persons they will be guilty of the awful crime of manslaughter.

It matters not whether the guilty one be drunk, or sober, if he (or she) be negligent and careless the crime is the same. But the fact that a person who is under the influence of infoxicating liquor is more likely to be negligent and careless than one who is not, should cause persons who drive motor cars to be careful not to drink—not to take any kind of intoxicant, in any form—before taking the wheel of a car. That is the rule of autoists in San Francisco and in other cities; it was the rule voluntarily adopted, even before the Prohibitory Liquor Law was enacted. It was found that the smallest quantity of an intoxicant was apt under the eye and hand unsteady and therefore apt to render the autoist unfit to direct his auto carefully and safely. Consequently the rule not to drink before taking the wheel of a car was adopted and generally observed; and it ought to be observed here. It ought to be the more particularly observed here because the law of the land, enacted by the Legislature on the authority of a majority of the people, and by the representative of the King, prohibits the use of intoxicating liquor as a beverage. Good citizens generally are obedient to the law; and every good citizen will refuse to buy intoxicants from those who sell them in defiance of the law, particularly before taking charge of a motor car of any kind. It has been truly said that "wine throws a man out of himself and infuses qualities into the mind which he is a stranger to in his sober moments." If this be true of wine, how much more so is it of whiskey and rum?

In the case in which the accused were adjudged guilty of "manslaughter" there was some difference in the evidence as to whether they were drunk or sober when the car went over the wharf. All the cricumstances before and after the fatal accident seem to indicate they were both somewhat under the influence of liquor. In any case the punishment which the Chief Justice has imposed will not be deemed to be unduly harsh or prolonged. To the men themselves it will, certainly, be the lightest that they will endure. To know and feel, so long as they live, that they were the cause—when drunk or when sober, it matters not—of the sudden death of two of their companions and friends, will be to endure the pangs of remorse as long as they live. Their fate—the result of their negligence when in charge of a car in which other persons were passengers—is a warning to all who drive cars to obey the law, to observe the regulations affecting motor traffic and travel and to be careful.

Central Guardian

SMALL-POX IN CITY — A case of small-pox was reported in the city and the Police yesterday placarded a house on Bayfield St.

RESERVE Monday, Feb. 21st for an evening with Paul Kollins, Heartz Memorial Hall. 3740

FUNERAL NOTICE.—The funeral of the late Dr. John P. Murray will take place this morning at 9.45 from his late residence, 42 Pownal St., to St. Dunstan's Cathedral thence to R. C. Cemetery.

FUNERAL TODAY.—The funeral of the late Mrs. Jessie M. Watkins takes place from her late residence, Upper Hillsboro St., this afternoon to St. Paul's Church thence to Sherwood Cemetery.

ATTENDING CONFERENCES—Premier Stewart left yesterday morning for Ottawa to attend an Interprovincial conference. Hon. H. F. McPhee leaves this morning for Halifax, to attend a Maritime Conference on Immigration. In the absence of the Premiers Hon. Dr. McMillan will be the acting Premier.

HIKE TO CORNWALL. — Last night twenty young people left the "Y" and hiked to Cornwall for a most enjoyable skate. The walking was not good but despite that, the group only took one hour and a quarter to make the journey. Arriving there they enjoyed a skate on an excellent sheet of ice, and later witnessed a game of hockey between Cornwall and a local team. Refreshments are provided at the rink for a very moderate cost and any group who would like to enjoy an outing could do no better than either sleigh drive or hike out to Cornwall. Over half a dozen ladies were in the party and helped to liven things up with their presence.

FORMER ISLANDERS.—An Austin, Texas, despatch, Jan. 10th says: Mr. Angus Macdonald was recently advanced from the position of Vice President to that of President of the Southern Pacific Railway. He was a noted athlete when a student at St. Edward's University, Austin, as well as at Notre Dame University, Indiana. He has been located in New York for more than a year, and it is probable he will remain there." The foregoing item is copied from one of our exchanges. We may not be able to claim this gentleman as "a successful Islander" abroad; but this much we surely may claim: His father and mother were both Islanders. The former was one of the Macdonalds of Little Pond, and the latter was Belle McEachern of Black Bush, King's County. Before leaving the Island, Mr. Macdonald, Sr., was a bridge-builder and contractor in the early 70's; and Miss Belle McEachern, whom he married shortly after, was a very popular school-mam and besides a capital violinist. The only near relative here now is Mrs. A. J. Biffin who is a niece of Mrs. Macdonald; and the late Alf. McEachern and his brother the late Jas. A. McEachern, noted lawyer of New York City were nephews.

BIRTHS

BABBIN—On Jan. 27th, 1927, at the Newton Hospital, to Mr and Mrs John T. Babbin (nee Mary T. Walsh) a son, weight twelve pounds. Congratulations.

DEATHS

BELL—At P. E. Island Hospital Feb. 7., Mrs. William Bell of Murray River, aged 63 years. The remains were forwarded to her late home by train yesterday afternoon.

MURRAY—At North Wiltshire on Feb. 7th, 1927, Austen Murray, age 14 years. Funeral Wednesday morning at 9.30 to St Ann's Church Lot 65.

NOONAN.—At Bedeque Monday, February seventh, Wm. A. Noonan, age 69 years. Funeral Thursday morning at 9 o'clock from his late residence.

CRABBE—At Milton, Monday, Feb 7th, John Crabbe in his 72nd year. Funeral at Milton Cemetery on Wednesday, Feb. 9th, at 2 p. m.

MALONE—At Kelly's Cross, Feb. 6, in her 68th year. Mrs. Thomas Malone. Funeral Thursday morning at 9 o'clock.

MAYHEW—At Kensington, Feb. 7, 1927, James F. Mayhew. Funeral will take place Wednesday, Feb. 9th., at 2 p. m. to Margate Cemetery.

McKAY — At West St. Peters, P. E. I. on January 25th, 1927, of pneumonia, J. A. Newton McKay, aged 8 months, dearly beloved child of Margaret Jane and Robert McKay.

Shut little sleepy blue eyes,
Dear little head be at rest,
Jesus, like you, was a baby once too
And slept on His own Mother's breast.

Interesting

(Continued from page 1)

year the best lot of steers we have ever had. They are being fed in groups of four to determine the value of turnips and the most economical quantity of turnips that may be fed to fattening steers during a short keep period of about 100 days. One pen is being fed cull potatoes to determine their comparative value for the same purpose. There is one check pen that does not get either turnips or potatoes. These 27 steers have made an average gain of over 60 pounds each in the last two months. They will be well finished before Easter.

From the steer barn it is only a few steps over to the new cereal barn. There we have stored in mouse proof rooms thousands of samples of grain that have been grown in connection with our research and investigational work with cereals. A nucleus of thrashing and cleaning machinery, electrically driven, has been installed. In the field adjoining our trained men have hyoridized by cross fertilization different varieties of wheat, oats and barley. The progeny according to Mendel's law may be divided into three groups; those having pure dominant characters, those with pure recessive characters and unstable hybrids that will continue to break up developing plants of many different characters from the same parent seed. These all have to be eliminated before a new variety becomes a pure line strain. The seed from promising heads is sown the following year in head rows 3 feet long and 1 foot apart. Careful records are kept of the progeny of each desirable plant. The new strains are grown in increase plots until their purity is established then they are tested with hundreds of other varieties and strains in rod rows with at least four replications for each strain. The varieties that prove most suitable are further tested in duplicate one sixtieth acre plots for years until their superiority for this Province is established, then they are multiplied on the farm rotations, registered and sold to seed growers or further multiplied on the illustration Stations throughout the Province for their districts. Some of our best sorts have been developed by selection. It was in this way that Charlottetown No. 80 barley, described in this booklet "Cereals The Corner Stone of Canadian Commerce," page 14, was originated at this Station. It has practically replaced all other barleys in this Province. It had led all varieties at the Experimental Farm at Nappan and at the Experimental Stations at Charlottetown, Kentville and Fredericton in the Maritime Provinces. At Lennoxville, Que and at the Experimental Farm at Agassiz, B. C., in recent years. Under certain soil and climatic conditions it drops all of its awns in the field, under other conditions some of the awns drop and the others readily break off at thrashing. Our P.E.I. veteran seed grower James E. Murphy calls it the "Farmers Barley". Its average yield in duplicate plots for 15 years at Charlottetown was 63 bushels and 22 pounds. Its nearest rival for the same period was O. A. C. 21 (Six-row) with 58 bushels and 44 pounds.

The varieties of wheat that have been most productive when quality is considered are Huron (bearded) and Early Red Fife (bald). We have a number of very promising new strains, some of them developed at our Charlottetown Station, but they have to be tested for years until they are known to be worthy to supercede the varieties mentioned. Banner oats that has maintained its lead for many years has now two rivals in P. E. Island that are gaining rapidly in favor. Alaska an early oat ripening some years in less than 80 days and suitable for late soils and backward seasons. The other Victory a Sweedish oat that is out yielding Banner as a main crop. A certificate from the Canadian Seed Growers Association No. E 8596 gives the Elite Stock registration of Charlottetown No. 80 barley the leading barley of the "Island".

One of the many projects in cereal research work is the test of rates of seeding for there sorts of oats: Daubeney, Banner and Abundance. We started this work at the request of the Research Council of Canada four years ago. There have been 1755 rod rows and a total of 585 separate plots each year. We sent forward the 1926 data in December to Ottawa where it is being considered by a special committee along with the results from similar work at four other Experimental Stations and Agricultural colleges. This work requires great accuracy and unlimited patience. Many thousands of seeds and plants have been examined and counted and recorded. The seeds were spaced so that the plants would be one inch apart in the rows. The results from this work should be available in the near future. The total number of cereal plots grown in 1926 was 1293.

In the cereal building there is also the electric oven and equipment for the taking of dry matter determinations for all of our forage crops. During 1925-1926 season we made 1244 dry matter determinations each sample remaining in the oven for 24 hours at a constant temperature of 100 deg. Centigrade. In connection with the elimination of error in taking yields of forage crops the greatest advance was made when all the forage crop yields were based on the dry matter content. The weight of field cured clover hay from the same area may vary according to the moisture content from 20 per cent of moisture down to 10 per cent of moisture within 12 hours as it dries out. Either lot months the moisture content might might keep in the mow and in six monthsthe mosture content might be about the same as 12 per cent moisture, but the weight taken as hauled in would be very misleading as to the actual yield of hay on the field. The yield of all of our roots, corn and hay have been calculated from a dry matter basis at this Station for years.

From the cereal barn to the Station ofifce we might pass around the lily pond. These five varieties of Kentucky water lilies planted in 1910 now completely cover the pond with leaves and bloom. Many fresh water ponds and lakes in the Province might now be stocked with these beautiful flowers. The Station will be glad to supply roots for that purpose to a limited exent in May of each year.

In the office you might be interested in discussing some of the 303 projects that have been started at the Charlotteown Station with the Superintendent or his Assistants. The test of rates of seeding oats mentioned will illustrate to you the project idea. All projects have to be submitted to the Division of the Central Experimental Farm interested and approved by the Director before being undertaken. The Experimental Station is the 'Island' farmer's headquarters for investigational and research work with pests, fertilizers, soils, crops and stock and for information concerning the many hundred subdivisions that the projects connected with these divide themselves into. The farm problems of today increase in complexity. The farmer finds that to work out the solution of many of these problems alone is beyond his means and ability. He knows that the balance between profit and loss, success and failure is often so close that only the touch of experienced advice is necessary to turn the balance in his favor. When the Station staff meets some problem that is new to them they can turn to the "Guide to Experimental Projects" and find out if work is underway on it at any of the 26 Dominion Experimental Farms. Over 2000 different projects are listed in the Guide and a letter to the right man will quickly get the available information. We have done a great deal of work as you all know with potatoes (I see that we have 12 projects in connection with potato culture listed in the Guide. The Charlottetown Station was fortunate years ago in getting a disease resistant turnip "Bangholm Selected" from Denmark, this turnip has proved itself to be one of the most resistant of all strains to Club-root. We have tested many strains called Bangholm Sel, that are on the market in Canada but have not found one as resistant as our own strain. The home grown seed rarely has a diseased root on even the worst infected soils. We grew about 200 pounds of this seed in 1926 and had a number of illustration Station operators also grow seed for their own needs.

From the office we might go through the poultry plant and see some of the breeding pens that are mated up for the coming season. Quite a number of these birds are registered and with their leg bands, wing-bands and tattoo (markings they seem to feel their importance. As indicated on their registration certificates the Barred Rock hen Ravenwood 2 B. No. 898 hatched May 1923 lad 246 eggs in the year ending Oct. 30th, 1924, and that the S. C. White Leghorn hen Ravenwood 13 B. N. 909 hatched May 1923 laid 267 eggs in her pullet year. The Charlottetown Station started the first Federal Egg Layin Contest in Canada in 1918 and out of that start has grown the Canadian National Poultry Records Association and the registration of poultry along production lines in Canada. Canada leads all the other countries in this work and it was largely due to this fact that she was able to secure the World's Poultry Congress which meets in Ottawa July 27th., to August 4th, 1927.

The 9th. P. E. I. Egg Laying Contest (for registration), may be seen, is on the way back from the poultry plant to the Mount Edward Road. There are three pens of White Leghorns and seventeen pens of Barred Plymouth Rocks, "the farmer's favorite hen." Many of these are second generation birds (that is) they are from registered stock but must qualify by laying 200 eggs that average 24 oz. per dozen in an egg laying contest or they are not registered. The average production in the contests has increased most encouragingly. In the contest ending Oct. 30th., 1920. the average number of eggs laid per hen was 119 during the years since that date the average has been as follows: 120; 126. 161; 171; 173; and last 170. Last year the requirements were stiffened up so that all eggs under 20 oz. per dozen were not counted at all and the eggs had to average 24 oz. per dozen or the bird was disqualified.

All our investigational work is being replicated as often as time and available land or animals will permit so that Statistical Methods may be applied whenever there is sufficient data and probable errors are determined so that the degree of accuracy in results can be measured. This recalls the weather and its relation to crop yields in P. E. Island. Last year we found that there was a correlation between the mean temperature in March and the yield of the main field crops on the Island. A low mean March temperature being followed for the last fifteen years by late spring conditions and good field crop yields. Let us hope that the exceedingly mild weather of January with its mean temperature of 25 F. that was 8 degrees above the sixteen years average at the Station, does not continue into March to spoil our crop prospects for 1927.

Observance and Enforcement of Law

SUBJECT OF SERMON PREACHED BY REV. R. W. LINDSAY, OF HAZELBROOK. STRONG RESOLUTIONS OF SUPPORT PASSED.

Rev. R. W. Lindsay, Pastor of the Cross Roads, Alexandra, and Hazelbrook Churches, preached a very interesting and forceful sermon on Observance and Enforcement of law. Basing his remark upon the text, St. John, 1st Chapter 17th verse "The Law was given by Moses, but grace and truth came by Jesus Christ."

The speaker endeavored to show the value of law and the benefits of law observance, also showed that laws were enacted not for ornament, but for enforcement. He referred to the fact that all God's prohibitive measures are not placed in the bible, but having blessed mankind with common sense, intelligence and the spirit of brotherhood, he expects the strong to protect the weak. There was a time when slave trade was countenanced but there came a time when that grace and truth which came by Jesus Christ set machinery of brotherly love in motion and by national and international agreement slave trade was abolished. Then the matter of child labor was next to be dealt with. The factories of Britain were full of children who were dwarfed in body and mind, because compelled to work so hard and long. There was no law against it and perhaps nothing in the Bible against child labor, but again the grace and truth that came by Jesus Christ set the machinery of brotherly love in motion and laws were passed prohibiting child labor. Thus many who otherwise would have been dwarfed in mind and body were given a chance to develop into strong manhood and womanhood. Who is there, unless the money grabber, that would wish to repeal that law.

The speaker then spoke of the liquor evil. In view of the suffering of women and children, the degradation of men, the national handicap and burden all of which year by year were increasing. Again that matchless grace and truth that came by Jesus Christ put in motion the forces of righteousness and measures were adopted to set free the slaves of the liquor evil. Temperance laws were enacted for the suppression of the liquor evil. The last enactment as far as U. S. A. and P. E. Island are concerned was the prohibition law. This is the best that has yet been found and has accomplished much for the alleviation of suffering women and children and the saving of men. A law, with all lack of enforcement that has done so much good must be of God. He is the giver of every good and perfect gift. A sad blight on a people, who are renowned for their spirit of fairness is that we are so tolerant in our attitude towards this great curse and keeping it for export so that the people of U. S. A. who are spending much money to rid their country of this great curse find it almost impossible.

If righteousness exalteth a nation then this unrighteous relationship will be as a mill-stone about the neck of our national life.

At the close of those services the following resolutions were unanimously adopted.

Be it resolved that we, the members of the Cross Roads, Alexandra and Hazelbrook Churches meet for divine worship on Feb. 6th place ourselves on record as being heartily in favor of the present prohibitory law of Prince Edward Island, realized it to be the best law yet found for the suppression of the liquor evil.

Bt it resolved that we request those in authority to take such measures as will ensure a more rigid enforcement of the law and that the names of violaters of the law be published as in the case of other law violations.

Be it resolved further that we pledge our hearty support to those in authority in observance and enforcement of the laws of the land.

Signed on behalf of the Churches
R. W. LINDSAY

Large, Red Pimples Covered Her Face
Miss Mable Moore, Blenheim, Ont., writes:—"A short while ago my face was covered with large, red pimples. I tried several remedies, but all failed. At last a friend advised me to take
BURDOCK BLOOD BITTERS
and I took three bottles. I will never regret the day I did this as my face is entirely cleared up.
My mother has taken B.B.B. for headaches, and she hasn't had the least sign of a headache for a long time."
This valuable remedy has been on the market for the past 48 years; put up only by The T. Milburn Co., Limited, Toronto, Ont.

15,000 C.N.R. Employees Demand Wage Increases

(Canadian Press)

MONTREAL, Feb. 7. — Negotiations for wage increases and improvements in working conditions affecting approximately 15,000 clerks, station and freight shed staffs, shop and roundhouse laborers, stationary engineers, firemen, floating equipment employees of the Canadian National Railways, began here today.

The men are represented by the system's committee of the Canadian National Brotherhood of Railway employees of which J. E. McGuire, Montreal is chairman. C. H. Minchin, Calgary, is secretary while R. Dykes, Winnipeg, W. C. Smith, Montreal and V. K. Polk are members.

Officials of the road are acting for the Canadian National Railways.
