GRAND TRUNK LINE IS EXCELLENTLY MANAGED.

During a recent dispute between the Grand Trunk Pacific and their boiler-makers, sympathetic interests with the latter endeavored through several channels to circulate the report that the freight traffic of the Grand Trunk Pacific was badly congested, and they had difficulty in moving freight. The Secretary of the Board of Trade of Watrous, Sask., wrote an unsolicited letter to the General Freight Agent of the Railway, in which he complimented him on the position of the weight conditions on the line. In this letter he gives the information that in connection with the installation of the electric light plant at Watrous they received a carload of machinery on the 9th of December that was shipped from Montreal on November 29th via Grand Trunk route, and says:—"A ten day service between Montreal and Watrous appears to us an exceptionally good service under the best of conditions and it certainly does not go to show that your road is tied up in any manner but entirely the opposite, that you are able to handle all freight to the best interests of the shipper. I compliment you on the prompt service rendered." Watrous is 408 miles west of Winnipeg.

The opportunities which are offering in all lines of trade and resourcefulness on the Pacific Coast is demonstrated by the fact that the Canadian Fish & Cold Storage Co., Ltd., have recently erected a cold storage and fish freezing plant at Ritchie Point in the City of Prince Rupert, B.C., the Western terminus of the Grand Trunk Pacific Railway, and has been built for the handling of the fish industry of the Northern Pacific Ocean.

The waters surrounding Prince Rupert team with Halibut, Ling and Grey Cod, Salmon, Sole, Herring, etc., the market for which is unlimited, and with the completion of the Railway the fish can be in transit to the Eastern markets on the same day as caught, thus assuring with speedy transportation, their arrival in first class condition at destination.

The building is constructed of reinforced concrete throughout. The foundation is built on solid rock, and

is of sufficient strength to carry the building to the height of ten stories. The present structure is six stories high, and can be extended as soon as trade permits.

The daily fish freezing capacity will be sixty tons, and the storage capacity of frozen fish about 6500 tons. The ice making plant is of 2 tons daily capacity, and space has been left for an additional 25 tons for future installation.
