### WOOL MARKETING

Wool will be received at Registered Wool Warehouse Number 18, Potato Growers' Warehouse at the foot of Prince Street, Charlottetown after June 18th. Wool shipped by truck or rail should be carefully tagged and addressed to the Wool Grading Station, Charlottetown, "Freight Collect." An advance of 22 cents per pound will be made on all wool of satisfactory quality and properly prepared for marketing. Wool will be shipped to Lennoxville for grading and the balance will be paid when statement of grades is received.

In shipping, each fleece should be tied separately with paper string and packed in old, but clean sacks. Do not ship in a large number of bags. Use one large sack if at all possible, as this aids in checking. A number of old, clean sacks sewed together will suffice. Each sack should be tagged with the name and address of the owner with one tag securely attached to the outside of the sack and another placed on the inside. A deduction of 1 cent per pound will be made for wool tied with binder twine or other unsatisfactory string. Proper paper twine is available at the Provincial Department of Agriculture.

**BONUS ON WOOL**

A bonus of 4 cents per pound on all standard grades of Canadian wool will be paid by the Provincial and Dominion Departments of Agriculture on fleeces properly prepared for marketing. The payment of the bonus will be made direct to the grower through the Provincial Department for wool approved and passing through the Registered Warehouse. Growers will please observe the following rules:

1. Remove any heavy tags and dung locks before tying each fleece.
2. Remove any burry, starchy, or dirty wool before tying.
3. Remove any other chaffy, or starchy portions of fleeces, or shake out light chaff before tying.
4. Shear when fleeces are dry. Keep wool from getting damp.
5. All these rejects, packed separately, may go forward as part of the shipment.

The bonus will not be paid on: (1) Any reject wool, (2) Fleeces tied with binder twine, (3) Wool received in wet, or musty condition on any clip that requires a lot of reconditioning at time of grading.

The bonus is not difficult to secure if the above simple rules are followed, but it applies only on clips received free of rejects, or when rejects are separated by the owner.

It is expected that the wool warehouse will operate for one month from the date of opening from June 18th to July 18th. All wool should be delivered in this period. Be sure that the regulations as indicated in this statement are carried into effect. Address communications to:

**THE PRINCE EDWARD ISLAND SHEEP BREEDERS' ASSOCIATION, CHARLOTTETOWN.**  
5-28, 30-6-1, 4-41

### Skill in Thinning Out Gives High Food Yield

With few exceptions, more seeds of a vegetable are sown than there is room for plants to mature, so it becomes necessary to thin out the excess plants, to give room for the rest to develop fully.

Sowing thin in the first place will greatly lessen the work of thinning, and also save seed. To make sure the seeds grow evenly, if your garden soil contains much clay, prepare a special lot of soil in which sand and humus are mixed freely to make it light and porous; and cover the seeds with this, instead of with the heavy garden soil. In sandy, or light loamy soil this will not be necessary.

When beets and carrots are sown thinly, thinning may be left until some are large enough to use. It is the half-grown carrots that are most delicious, and the growth is so much more in length than in diameter of the root that the thinning process does not disturb the others so much.

Turnips must be thinned before they begin to form. The early turnips are round and flat. They do not grow well if crowded. If thinning is postponed until the roots begin to form the growth of all is checked and the ravages of worms, which are always ready to feed on turnips, are likely to be fatal. If the young plants are pulled up so they stand 4 inches apart in the row in a remarkably quick time they will be large enough to use.

Beets are more easily handled than turnips when they are a little larger, and one should not fail to try a dish of beet tops with the turnips just beginning to form. It is a delicious introduction to the garden menu. The beets which are left in the ground should be spaced inches apart.

Thin Lettuce Plants to Stand One Inch Apart, at First.

Salsify, parsnips and chicory which are to remain in the ground all season, should be thinned early to 3 or 4 inches apart in the row. If your soil is rich the smaller interval will do, but if it is not, then give more room.

Bush lima beans will never develop properly if crowded. A foot and a half to 2 feet should be given to each plant for best results. Bush beans, green pod and wax, should have 3 or 4 inches, depending on the richness of the soil. Peas are not usually thinned but should be planted with plenty of room to grow.

Radishes are usually thinned by using them. This always results in a lot of imperfect specimens which will be thrown away. It is a good plan to thin the seedlings when they first appear.

Leaf lettuce should be thinned when growth begins, to about one inch between plants. As lettuce is usually planted, this means disturbing the big majority of the seedlings. Those remaining will develop rapidly, however, and soon be large enough for some to use. Pull up alternate plants as they use.
