

The NEW 1932 Firestone HIGH SPEED TIRE

FIRESTONE now offers you a tire with two extra plies under the tread at no extra cost! Think of it—added strength, safety and mileage at the same cost of ordinary tires. No other tire can offer you this feature which gives 26% extra protection against punctures and blowouts, and assures safety at any speed.

In addition, only Firestone Tires are Gum-Dipped to give 58% more flexing life to the cords and make the tire body tougher and stronger. Only Firestone Tires have the Scientifically Designed, quiet running non-skid tread which gives 26% more wear with added traction and safety.

These three features—exclusive with Firestone—are balanced constructed to give 25 to 40% longer tire life—at no extra cost. And, in addition, the materials and workmanship in every High Speed Tire are guaranteed for the life of the tire.

There's a Firestone Dealer conveniently located near you. Drive in today and see for yourself the Extra Values in Firestone Tires.

2 EXTRA CORD PLYS UNDER THE TREAD at NO EXTRA COST
Firestone
Oldfield Tires at Lower Prices
Two extra cord plies under the tread, gum-dipped cord body and a deep, tough tread make Oldfield Tires equal all standard lines, yet you can buy Oldfields for approximately 20% less.

Listen to the Voice of Firestone, featuring Lawrence Tibbett. On the air every Monday evening over the NBC Network.

Guaranteed for the life of the Tire

Garden Items

Continued from Page 11

but it is easily possible to spread the expenditure over several years on a budget system.

Of course, if one can plant all at once, one gets the enjoyment of well planted grounds the sooner. But it is much easier to plant part at a time than to build in that way. Gardens do not depreciate with years as buildings do. With intelligent care they grow more valuable, and newer plantings quickly mature into perfect harmony with the old.

Of course no planting can be done until the grounds are graded and the walks established. And there must be a definite visualization of the ultimate effect. This means a plan in the mind or on paper, and it is safer on paper than in the mind. You may be competent to make this plan yourself, or you may obtain help from experts who are usually available.

Think out the successive steps to be taken according to the amount which can be expended each year. Mark out your shrub and flower beds and borders, and see that they have good soil to a proper depth. Then plan the location of your trees.

Trees and foundation planting may well be planted the first year. The trees need time to grow, and the foundation planting will help your house to fit into its new surroundings. The lawn should be seeded and annuals sown the first year.

The second year you may plant the shrubby masses which are to screen objectionable views, and put in the evergreens and other accent plants. Then shrubby backgrounds for the borders may be planted, and in front of them perennials for the permanent garden picture. Later the architectural features can be added as the final touch to the garden picture.

Such a budget program can be found full of interest. As the planting develops, you may acquire a new conception of the complete development, perhaps additions to your plan. Do not hesitate to do so, for a garden is a growing thing. When we stop changing it we are apt to lose interest.

A sunny day in the late winter, when the temperature stands above freezing, should be chosen to spray fruit trees, lilacs, chous-

tain ash and other trees and shrubs that are affected with scale insects. Use lime sulphur, or one of the commercial oil sprays. Never plant trees and shrubs in mud. Test the soil by moulding a ball in the hand, then striking the ball. If it crumbles, the soil is right for planting. If it retains its shape, and flattens into a mud pie, the soil is too wet.

When shrubs and trees are being held for suitable planting conditions, they should be "heeled in," which means to dig a shallow trench, put their roots in it, and cover them with loose, somewhat moist soil. This prevents drying out.

"Puddling" is a device useful to the shrub and tree planter. It means immersing the roots of a plant in liquid mud. This causes a coating of wet soil to form on the roots; it is useful to prevent drying out and help a plant to recover after being too long out of the ground.

Canadian Garden

Continued from Page 11
new plants, they should be planted immediately in moist soil, but if this is not possible, dig a shallow trench and "heel in" by covering roots firmly with soil. All shrubs, rose bushes, trees, and vines should have tops pruned back and they should be set in permanent quarters a trifle deeper than they were planted in the nursery bed. Give the roots plenty of room, spreading them loosely about the hole, then cover with good garden soil, throw in a pail of water, fill in the remainder of the hole and press soil down firmly. In the case of trees and such single stem plants as lilacs, provide some support against the wind in the form of a stout stake and tie with soft twine or raffia. If the soil is poor it is a good thing to add some good garden loam and also an occasional application of commercial fertilizer dissolved in water.

WHEN SOIL IS FIT TO WORK
When this old earth really begins to warm up in the spring the normal person who traces his ancestry back to the farmer before the ape feels an impulse to get out and dig and while the modernist frowns on repression of any kind the experienced gardener advises extreme caution at this time. If the earth is too wet there is grave

danger of a nasty cold not to mention dire consequences to the soil itself. Too early working will cause the latter to pack down hard and it may require a whole summer of constant digging and raking to get it back into its old crumbly self again. There is a simple test. If the soil crumbles after a little is squeezed in the hand or if it does not muddy the boots, it is safe to go ahead, but if it compacts into a ball, it is best to satisfy the spring craving with a good walk or game of golf.

GRAFTING AND TRAINING

Grafting is not a difficult operation. The main thing is to get a portion of the inner bark of the scion, or twig being grafted onto the tree exactly opposite and tight up against the inner bark of the limb of the tree, so that the two may grow together. When working on a big limb it is best to take two or three twigs and insert them around the edge of the sawed off portion with the two inner barks in close contact. Later on when growth has well started remove all but one twig. After putting together, tie tightly with raffia or some soft twine and cover all around the joint with grafting wax. It is advisable to get some good Government bulletin on this subject before attempting the work. By grafting one can repair a tree which rabbits or mice have gnawed and which would die without this treatment and can put a complete new top on a broken down tree or one of a non-desirable variety. Grafting and training opens up interesting possibilities to the gardener. One apple can be made to fill the place of three ordinary trees if an early variety like the Yellow Transparent, or Astrachan, a good early cooker like the Duchess and a fine winter apple such as the McIntosh are all grown on the same trunk. By careful pruning and training shrubs and trees may be made to assume weird shapes or almost as ornamental as the hardwoods usually planted for this purpose. One may make bushy trees of climbing roses by only allowing a single stem trained to a stake and then encouraging this to branch by cutting it off when it reaches a certain height. In Japan by judicious pruning and withholding of fertilizer and water pines and oaks of very dwarfed proportions are grown in pails and tubs.

The Wine that Jesus Made

Mark those last three words, "both are preserved." God would have man use the unfermented wine. At the Cana marriage feast, in Jesus' first recorded public miracle as recorded in John 2:1-11, He turned water into wine. This same Jesus, through the miraculous forces of nature, is still manifesting "His glory" by turning water into wine. But the kind of wine that the Creator makes is always found "in the cluster," and is always "a blessing." It becomes a curse only when man takes it from the cluster and lets it sour and ferment. Then it becomes intoxicating, becomes "strong drink," is "raging," and "whoever is deceived thereby is not wise." Proverbs 20:1.

God's gifts are all "good" (James 1:17). Man's perversions are bad. The purest, healthiest, and best wine is always the unfermented "fruit of the vine." It was pronounced to be "the best" by the governor of the feast at the Cana wedding feast. It is the "best" today. Intoxicants should be prohibited. That is the safest way to "regulate" the liquor traffic—outlaw it altogether. It is extremely probable that it was because the sons of Aaron, Nadab and Abihu drank too much

W. C. T. U. Notes

DID CHRIST MAKE FERMENTED WINE?

(In conversing with friends one day, I mentioned an article I had read by Semple White, entitled "Did Christ Make Fermented Wine?" and I was asked for the article and then thought that perhaps others of our readers might be interested and decided to have it printed in "The Sheaves"—Editor.)

Among the numerous unfounded "facts" and misleading assertions that the "wets" are scattering in their propaganda is the statement that Jesus Himself turned water into fermented wine, and that the Holy Scriptures justify the indulgence in intoxicants. So persistently is this repeated that people need to be enlightened as to what the Bible really teaches on the subject.

In translating the Old Testament Hebrew and New Testament Greek into the English language, both unfermented and fermented grape juice have been translated "wine"; but the context itself, in connection with the general teaching of the Holy Scriptures on the subject, makes very clear the kind of wine referred to. In the key text, Isaiah 65:8, which is backed by "Thus saith the Lord," we read that "the new wine is found in the cluster," and that "a blessing is in it." No one can drink enough of the unfermented pure "fruit of the vine" to become intoxicated. But when man takes the juice from the cluster, and lets it sour and ferment until it becomes intoxicating, there ceases to be "a blessing" in such "strong drink." It has then become a curse; and God pronounces "woe" against those who tarry long at such wine, or who give their neighbors such drink (Proverbs 20:1; 23:29-32; Habakkuk 2:15). This principle applies as well to fermented grains and vegetable products. Grain, when run through a mill and made into bread to be eaten, is a blessing; it gives strength and health. But when, when run through a distillery to be drunk in its soured and poisoned condition, becomes a curse, and produces weakness, sickness, and sorrow.

"In the Cluster"

In Jotham's parable (Judges 9:12, 13), the vine was represented as being contented and happy in giving man such a blessing as new wine "in the cluster," that ever "cheereth God and man." The wine in the cluster is, of course, unfermented. Knowing Paul as we do, we cannot conceive of his advising Timothy to partake of the kind of wine that was so strongly condemned in the Holy Writings (1 Timothy 5:23.) It is also well known that dietitians today recommend pure grape juice to patients.

In olden times, as well as in some parts of the world today, "the fruit of the vine" is taken from the cluster and kept in the skins of freshly killed animals. Since these skins are not air-tight, fermentation begins in time, and the skin "bottles" stretch. If the grape juice from the vintage was put away in old dried skin "bottles," when fermentation and expansion began the dried skin containers would burst, and all the wine would be lost. Jesus definitely refers to this in Matthew 9:17, where we read: "Neither do men put new wine into old bottles: else the bottles break, and the wine runneth out, and the bottles perish: but they put new wine into new bottles and both are preserved."

The wine that Jesus made was unfermented. At the Cana marriage feast, in Jesus' first recorded public miracle as recorded in John 2:1-11, He turned water into wine. This same Jesus, through the miraculous forces of nature, is still manifesting "His glory" by turning water into wine. But the kind of wine that the Creator makes is always found "in the cluster," and is always "a blessing." It becomes a curse only when man takes it from the cluster and lets it sour and ferment. Then it becomes intoxicating, becomes "strong drink," is "raging," and "whoever is deceived thereby is not wise." Proverbs 20:1.

Joe's Here

Today In Best Laugh Getter

"Local Boy Makes Good," the much-heralded First National comedy-drama in which Joe E. Brown, funniest man of the screen, is starring is now at the Prince Edward Theatre.

This picture is unique for a number of reasons, first of which is the fact that in it Joe E. gets his comedy effects without resorting to slap-stick exaggerations, as in his former films. "Local Boy Makes Good" is an uproarious drama of college days, based on a very humorous play by J. C. and Elliott Nugent. The story is good and the people are real folks.

Joe E. plays the part of a 'mid and near-sighted college student, who makes his meagre way by clerking in a bookstore. He has an inferiority complex and secretly writes love letters which he never mails, to a girl he has never seen. In these mislives he praises his own prowess as an athlete—and the fun begins when someone else mails one of the notes, and the girl comes to attend the intercollegiate track events—and to meet the (supposed) hero.

"Local Boy Makes Good" is a great gloom chaser.

stale wine from the skin bottles, that they became intoxicated and offered "strange fire" before the Lord in the tabernacle. At all events, God was so displeased that "there went out fire from the Lord, and devoured them." Leviticus 10:1-10. Then, for all time to come, through Aaron, the high priest, God admonished His servants against the use of intoxicants in connection with the service of God: "Do not drink wine nor strong drink, thou nor thy sons with thee, when ye go into the tabernacle of the congregation lest ye die: it shall be a statute forever throughout your generations: and that ye may put difference between holy and unholy and between unclean and clean." Verses 9, 10.

Christians today should never use fermented wine at the Lord's Supper. Jesus used the "fruit of the vine." Matthew 26:29. "Ye were not redeemed with corruptible things," said Peter, "but with the precious blood of Christ, as of a lamb without blemish and without

"Dude Ranch"

Good Comedy

Jack Oakie goes Western in "Dude Ranch," the tornado of mirth now playing at the Capitol Theatre. In this picture the prince of joydom will be seen for the first time in a real cowboy "get-up."

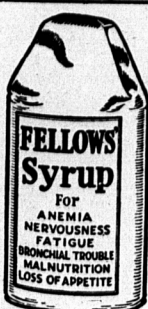

But Jack isn't supposed to be the real cowboy. He is the real sure-shooting ho-ho-man of the real Western pictures. He is supposed to be a member of a traveling troupe who are stranded near a "dude-ranch" in the Rockies and who pose as real red-blooded Western types to give the tenderfoot ranch suits a thrill.

The comedy effects from this situation are boundless and Mr. Oakie gets double laugh values out of all of them. He is supported by such able purveyors of fun as Eugene Pallette, Mitz Green, Cecil Weston, Charles Sellon and Stuart Erwin. The film is based on the humorous novel "The Lone Rider of the Mojave" by Milton Krims.

The romantic interest is capably furnished by June Collyer, New York social registerite who turned cinema's a few years ago and who has made the words charm and beauty mean something in the talkies.

spot." 1 Peter 1:18, 19. So in the sacramental service today, that which represents Jesus' blood should be just what Jesus used, the "fruit of the vine," an uncorrupted substance, even "new wine," preserved in its unfermented state. Religious people who use intoxicants at the sacramental service lessen respect not merely for the Eighteenth Amendment, but for the sacred truth which the Communion service commemorates.

This, in brief, is what the Bible really teaches about "wine." He who will take the sensible, reasonable, inspired words of the Lord at their face value will never become drunken with the unreasonable, unsatisfying, and fickle traditions and customs of the world, which, in Revelation 17:2-4, are symbolized by intoxicating wine. God's pure ways are the best ways.

NERVOUS EXHAUSTION

is a dangerous condition, often tending to mental disorder or complete collapse.

It contains in correct balance and in the purest form, such valuable constituents as Calcium, Iron, Phosphorus, Quinine, Sodium, Potassium and Manganese, many of which have their important functions in the treatment of Neurasthenia.

results in cases of Nervous Exhaustion. Ask for Fellows' Syrup—made in Canada—sold at all drug stores. 51

Dorothy Dix Letter Box

Continued from Page 8
DEAR MISS DIX—I am in my early 20s and have been secretly married for two years. My wife loves me very much and I am deeply in love with her, but in addition to being deeply in love with my wife I am also deeply in love with another girl who is also very much in love with me. My wife knows nothing of this other girl. I realize that by continuing this relationship with the girl sadness and misery are going to ensue, but I hate to hurt either of the two girls concerned in this affair. The trouble is I can't make up my mind which one of these two girls I love the best. What would you do?
BUDDY.

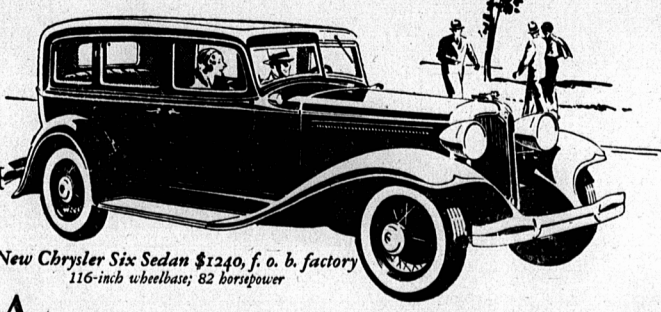

Answer:
My earnest advice to you is to emigrate to some country where polygamy is the fashion. Any man with your philandering talents is wasted in a country where only one wife is permitted by law.

But when you get a divorce from your present wife let me urge you never to marry again. Just keep yourself free to love 'em all, and that will keep you from being a worry and an aggravation and a heartbreak to a wife, for it isn't in you to be faithful.

I think, however, that in common honesty you should tell the girl you are married to of your fickleness and let her get out of her secret and ill-advised marriage to you before things get any worse.
DOROTHY DIX.

apparently modelled on the early efforts of African savages," says the Dean, "or of paintings which seem to be the work of mad mathematicians or to come from the nursery of a very disagreeable child. I hope the examples of a purer art which are to be seen in this exhibition—The Dean was speaking at the Royal Institute of Painters in Water Colors—will do something to abolish such works which are, I am convinced, simple nonsense. I trust that during the next 10 years they will be banished to the bathroom—or even further."

Only an actual ride in the car gives you the Chrysler story—

New Chrysler Six Sedan \$1240, f. o. b. factory
116-inch wheelbase; 62 horsepower

A NEW SENSATION—public attention is fixed on Chrysler—there's a rush to drive Chryslers—friends are telling friends.

It shows how quickly the public gets wind of great progress in engineering—how quickly the news has spread that the new Chryslers have that new type of engine mounting, Floating Power—how quickly the public has realized that Floating Power is the greatest automobile development of modern times.

All the talk about Chrysler is causing a rush to drive Chryslers. There is a surging rise in sales. People who have been loyal to other cars for years and years are now flocking to Chrysler. It's the old, old story—something better, a bigger money's worth.

There is nation-wide talk, too, of Chrysler's many other great new basic developments—the perfectly marvelous results of Chrysler's latest engineering.

No words can describe this new sensation in motor car performance. You have to ride—you have to be in the car yourself. Accept our invitation to drive a new Chrysler and we promise you the most unforgettable ride you have ever enjoyed.

- CHRYSLER SIX
6 body types . . . \$1195 to \$1295
116-inch wheelbase; 62 horsepower
(Automatic Clutch on all Sixes at slight extra cost)
- CHRYSLER EIGHT
3 body types . . . \$2025 to \$2075
125-inch wheelbase; 100 horsepower
- CHRYSLER IMPERIAL EIGHT
2 body types . . . \$2695 to \$2725
135-inch wheelbase; 125 horsepower
- CHRYSLER IMPERIAL CUSTOM EIGHT
6 body types. (Prices furnished on specifications required).

- Is Any Car Up-to-Date Without These Features?**
- FLOATING POWER**
New-type engine mounting; wipes out power tremor at all car speeds.
- AUTOMATIC CLUTCH**
Completely automatic. Leaves your left foot entirely idle.
- FREE WHEELING**
Most modern type—separate unit behind transmission.
- SILENT GEAR SELECTOR**
Effortless, instant, clashless selection of a higher or lower gear at any car speed—as easily as moving a lead pencil.
- OILITE SQUEAK-PROOF SPRINGS**
Never need lubrication—and never squeak.
- HYDRAULIC BRAKES**
Positive action. Never need lubrication. Always equalized. No side-pull.
- CENTRIFUGE BRAKE DRUMS**
Larger steel drums with cast-iron linings; fixed to the steel. Cooler, more efficient, longer lasting.
- ALL-STEEL BODY**
Utmost safety. All-steel construction, rigidly reinforced and completely sound-insulated.
- DOUBLE-DROP GIRDER-TRUSS FRAME**
Low center of gravity. Extremely rigid—a distortion-proof foundation for the body.
- DUPLICATE SAFETY PLATE GLASS** is obtainable from \$17.50 to \$35.00 extra.
