The amount m delivered is adjustable by a regulating screw on the ed, and if this screw be completely "off," the user once a dry iron. Every ency likely to arise from of water in the iron itself en met by prolonged experi- work, and by appropriate and manufacture. Apart ts domestic uses, the new finding extensive application ndries, tailor shops, and commercial concerns.

ing and Cleaning Steam.

of the scientific half-truths have gained common cred- is that when water is boiled substances in solution are hind by the escaping steam. true that pure-distilled water tained by condensing steam, does not follow that all steam ure. Every engineer knows too well than when his boil- are working at or near full with the water in furious cir- culation and steam leaving it at the rate of tons per hour, the steam carries off quite a considerable pro- portion of water and also some of the solid matter precipitated in the boiler. Steam which is wet and more or less dirty leads to many undesirable consequences. It has a powerful scouring action on the parts of engines and turbines, and thus causes wear and reduced efficiency. The hot water in the steam is useless for power purposes and therefore represents a loss of heat or, if the wet steam be passed through a superheater, the latter has first to dry the steam before it can commence its legiti- mate function. An even more ser- ious consideration is the risk of steam pipes being broken by the hammering action of water col- lecting in them from the steam. Many devices have been tried with a view to averting these troubles and a British firm has introduced a steam dryer which is now in suc- cessful operation on many hund- reds of boilers. In this device, which operates in the principle of the centrifugal separator, the steam is deflected radically through guide vans cast on a plate inside the separator chamber. A vortex motion is thus imparted to the steam and all moisture and solid matter is thrown outwards and ex- pelled through a tangential outlet. The steam, now dry and clean, passes out of the chamber in the direction of its original motion. This type of separator is equally suitable for use in the steam pipe within the boiler, or in an external steam pipe. The higher the rate of steam flow, the more powerful the centrifugal action, and the effic- acy of this device has been dem- strated under all conditions of working.

A Valveless Pump.

The only way in which liquids can be moved commercially is by pumping, and as liquids are used in the majority of industrial pro- cesses, it follows that few mach- ines are of such general interest to the engineer and manufacturer. One of the most difficult problems is that of dealing with fuel oil, lubricating oil, and the various heavy fluids employed in breweries, bleaching works, refineries, paper works, and other concerns. Centri- fugal or turbine pumps are not suitable for heavy or viscous fluids and any pump which contains valv- es is a potential source of trouble and expense.

In the search for a machine which should represent the acme of simplicity and reliability, a Brit- ish firm has evolved a pump which contains only two moving parts and no valves or springs. The complete pump, which, by the way, is often smaller than the pulley used to drive it, consists of a cyl- indrical casing, a toothed disc, a gear wheel, and the cover plate. The disc is driven by a shaft enter- ing through the back of the casing, and on the face of the disc there are teeth extending radially in- wards. These teeth mesh with the gear wheel which revolves on a stud fixed in the cover. The space between the tops of the two sets of teeth is filled by a crescent- shaped piece cast solid with the cover. As the disc and the gear wheel revolve, liquid is drawn in through the suction pipe and an equal amount is driven out through the discharge pipe. The pump can deliver at a pressure of 70 lbs. per sq. in. (5 atmospheres), and it can be used with hot or cold liquids. When required, it is built from special materials resisting acid or alkaline liquors. As will readily be appreciated these valveless pumps need little in the way of at- tention or upkeep.

A New Tyre for Commercial Motor Vehicles.

Those of the older generation will recall the glorious feeling of immunity from punctures which they enjoyed when using "cushion" tyres on their bicycles in the early days of the pastime—also the less pleasurable bumps which they ex- perienced as the price of that im- munity. Fortunately it soon be- came possible to obtain pneumatic tyres which combined resilience with strength ample for the require- ments of the bicycle and, in due course, for the much higher re- quirements of private motor cars. The development of motor trans- port has, however, revived the old problem in a different form and users of commercial vehicles will welcome a tyre which combines the shock-absorbing qualities of the pneumatic with the durability of the solid tyre. For many classes of commercial vehicle the solid tyre is not sufficiently resilient whilst pneumatics are costly and, in the largest sizes, liable to "roll." After prolonged investigation of the many problems involved, a British firm, which has been associaetd with rubber tyres from the earliest days, has perfected an air-core tyre, meeting the most stringent requirements. The new tyre, which can be fitted in place of pneumatics without alteration to the wheel or rim, has a hollow centre and a met- al base. Permanent cushioning is obtained by the air sealed in the core, and the walls are so design- ed as to eliminate all tendency to "rolling." The tread is of non-skid design and is specially reinforced so that upkeep costs are reduced to a minimum. Where pneumatic tyres are replaced by the new pat- tern there is, of course, no need to carry a spare tyre, and larger sizes of the new tyre are being produced for heavier vehicles on which, at present, solid tyres can alone be used.

Englishman Claims Right To Large N. Y. Estate

(By Dominion News Service)

LONDON, Aug. 15.—Frank Ed- wards, of Clifton Villas, N. W., ver- ger of a church in Camden Town, is a claimant to one hundred mil- lion pounds or about five hundred million dollars.

It represents the value of sixty- five acres of land on Broadway, New York, and the romantic his- tory of Mr. Edwards' claim goes back to the days when Broadway was a cowpath.

Robert Edwards, great-grand- uncle of Mr. Edwards, of Camden Town, went to America before the War of Independence, in the days when New York was new Amster- dam. He worked hard and saved steadily for years, and then bought a piece of land on Manhattan Island, beyound the limits of the cluster of wooden houses that were the nucleus of the greatest city of the West.

The site of the Woolworth Build- ing in those days was a smiling or- chard. The present City Hall is be- yond the city boundary that Robert Edwards knew. He leased his cou- ntry estate to the Crown in the reign of George III.

The war came, and America be- came independent, but the new Government recognised Edwards' ownership of the land, and took over the unexpired lease. Edwards was a bachelor to his death, and no will of his has been found.

He had the American genius for real estate, and he knew that his land would one day be valuable. His brother was dead, but he wrote to his brother's eldest son Henry, a sailor:—

"When next your ship touches these shores be sure you come to see me, it will be greatly to your advantage."

Henry set sail for New York in the sailing-ship Rhone, carrying with him a bundle of important papers. The ship went down with all hands.

Nobody came to see Robert Ed- wards from the old country, and when the old man died his estate went into Government keeping.

New York grew, and the fields of barley, wheat, and rye which Rob- ert Edwards cultivated began to sprout richer crops. Wooden houses sprang up and were moved down to make room for brownstone fronts. These were reaped later to give place to theatres, cabarets, and restaurants, Broadway's present crop.

Henry's son tried to prove his title to the Broadway acres but died before his task was complete. His widow had nine children, the eldest being the verger of Camden Town. All of them are now hot on the trail, with a New York senator working in America, and a firm of lawyers on this side, to obtain the property.

One of Mr. Edwards' sisters said yesterday:—

"We have all saved and saved for this, and we are confident of our right to the property. We have all the necessary birth and death certificates, except the birth cer- tificate of Robert. They not keep records so carefully in those days."

Many great families, such as the Astors and the Vanderbilts, owe their wealth to the increase in value of New York land. More than £1,000,000 was paid in 1920 for the small area of New York City known as "The Astor Farm." It is now covered with theatres, tenements and factories.

CURSING OR BLESSING?— Cursed be the man that trusteth in man and maketh flesh his arm, and whose heart departeth from the Lord.

Blessed is the man that trusteth in the Lord and whose hope the Lord is.—Jeremiah 17:5, 7.

Save The Children

Mothers who keep a box of Baby's Own Tablets in the house may feel that the lives of their little ones are reasonably safe dur- ing the hot weather. Stomach trou- bles, cholera infantum and diarrhoea carry off thousands of little ones every summer, in most cases be- cause the mother does not have a safe medicine at hand to give promptly. Baby's Own Tablets re- lieve these troubles, or if given oc- casionally to the well child will prevent their coming on. The Tablets are guaranteed by govern- ment analyst to be absolutely harmless even to the newborn babe. They are especially good in summer because they regulate the bowels and keep the stomach sweet and pure. They are sold by medicine dealers or by mail at 25c a box from The Dr. Williams' Medicine Co., Brockville, Ont.

Fixes Blame On DeValera

DUBLIN, Aug. 16—The publicity department of the Free State Gov- ernment in a statement to the press this evening fixes on Eamonn De Valera the responsibil- ity for the campaign of the Irish Irregulars and republishes all his captured correspondence in proof of this charge.

For Thin Falling Hair Use Cuticura

If your scalp is irritated and your hair dry and falling out in handfuls, try this treatment: Touch spots of dandruff and itching with Cuticura Ointment and follow with hot sham- poo of Cuticura Soap. Nothing better than Cuticura for all skin and scalp troubles.

Soap 25c. Ointment 25 and 50c. Talcum 25c. Sold throughout the Dominion. Canadian Depot: Lymans, Limited, 344 St. Paul St., W., Montreal. Cuticura Soap shaves without mug.

Sunday School Lesson

Lesson 21. August 19.

STEPHEN

Golden Text.—Lo, I am with you always even onto the end of the world.—Matt. XXVIII. 20.

Lesson Text.—Acts VI to VIII. 2. (Stephen's ministry.)

Stephen was the first Christian martyr. Martyr was originally a Greek word meaning witness. In the early days when a Christian witnessed to the truth of Christ's religion he generally got killed for it, so that martyr soon came to mean someone who had died for his religion.

As the infant Christian church grew rapidly it devloped an organ- ization necessary and convenient for its work. Some slip-up in charit able distribution caused the Apos- tles to hand that work over to a set of church officers especially chosen for the purpose. This enabl- ed the Apostles to have more leis- ure for their spritual ministry. The new officers were called deacons, from the Greek word for servants. Stephen was one of the first seven deacons appointed. He is described as a "man full of faith and of the Holy Ghost."

Stephen's ministry was very eff- ective. It brought him into dispute with members of a congregation of foreign Jews. When he overcome them in arguments they got up a mob to bring him before the Sanhe drim, where he was accused of blasphemously teaching that Jesus would destroy the temple and charge the customs of Moses. "Are these things so," asks the High Priest. Stephen does not deny that he has taught that the temple will be destroyed. He justifies its des- truction in a terrible indictment of the Jewish people before whose leaders he stands. It is they who disobey Moses, not himself; for Moses foretold the Christ and bid them obey Him. It is their ideas about the temple which are blasp- hemous, as if the Most High dwells in buildings made with hands. They have kept the ritual of the law but their hearts are uncircumcized. Their fathers killed the prophets who foretold the Christ. And now they have slain the Just One Him- self.

As he speaks their vision of themselves as God's beloved favor- ed nation fades, and their hopes of national glory. His words strike home. They recognize their nation- al guilt. "They are and to the heart and gnash their teeth."

Stephen is taken cut of the city and stoned to death. Probably the law was scrupulously observed. The judges voted guilty. He was led out and cast down bound from an elevation and the first stone a great one thrown by the witnesses.

Stephen suffered like Jeremiah for telling the truth about the des- truction of Jerusalem and saying it was not ritual alone but right- eousness at all that God wanted. Jeremiah wrote "render onto them a recompense according to the work of their hands. Give them sorrow of heart, They curse upon them." So his Master, Stephen prayed, [redacted] charge."

"Aand when he had said this he fell asleep." This new way of speak- ing of death came in with the great miracles of Christianity.

Stephen followed in His Master's footsteps through the gates of death. His death was easier be- cause Christ had gone before. Christ died in darkness and gloom. Stephen's face shone like the faoe of an angel He saw the heaven open and His Master standing at the right hand of God and cried: "Lord Jesus receive my spirit."

"And the witnesses laid down their clothes at a young man's feet whose name was Saul." Stephen's death was a great prayer. Saul's conversion: Paul's missionary career was the answer.

BIBLE QUESTIONS

Test your knowledge of the bible by these question. Retain your an- swers published in our next issue.

55. What is the first lie in the Bible?
56 What is the first lie in the New Testament?
57. Who was the first Apostle to die for christ?
58. Who fasted when Daniel was in the lions' den?
59. What was Jacob's first great sin?
60. How was Jacob punished?

ANSWERS.

49. Jesus. Luke XXIC. 29.
50. Peter, Acts X. 26.
51. Acts XXVIII. 8.
52 Moses, Ex. XXXII. 26.
53. Absolom II. Sam. XV. 5.
54. Abraham Gen. XVIII. 23.

CHILD WELFARE

(Continued from Page 9)

for wheat, but in the near future the conditions may be otherwise. Barley is an easy crop to raise, and may be planted in the late spring for fall reaping, so our ag- riculturists might assist greatly in the solution of the bread problem, which threatens to be an acute one before many months have pas- sed, by giving attention to the cul- tivation of barley.

Buckwheat is another cereal which has great food value, and which might be produced in great- er quantity as an offset to wheat shortage. This may be served in various palatable and nutritious dishes which may be used to a con- sunderable extent in lieu of bread.

Of the pulses, peas and beans in the dried state have a dietic value which is well recognized. Com- pared with the meats and the cer- eals, they take an intermediate place, being richer in protein and poorer in carbohydrates than the cereals. The fat content corres- ponds very closely to the cereals. while the mineral content is some- what greater. A plateful of good thick pea soup contains about as much protein as an ounce of lean meat, and about as much carbo- hydrate as two ounces of bread. Dry beans are very similar to dry peas in composition, but contain a larger proportion of sulphur, and for this reason are apt to cause flatulence. The protein content of dry peas and beans is about equiv- alent to that of an equal weight of lean beef, while the carbohy- drate content is about three-quar- ters that of fine wheat flour. It is thus evident that these pulses may be used, to a reasonable extent, to replace both meat and bread.

Amongst the root vegetables, that which is of greatest import- ance is the potato. The main food constituent of the potato is carbo- hydrate, but it also contains cer- tain salts and vitamines which serve the important function of maintaining the blood in a healthy condition. These salts are largely lost in boiling, especially if the po- tato has first been peeled. Peel- ing is, moreover, otherwise waste- ful, inasmuch as a considerable per- centage of the nutritive part of the potato is lost in the process. The most economical way of cooking potatoes is roasting. At the pre- sent time, rice is an economical partial substitute for potatoes. Rice, however, especially is highly polished, is deficient in salts and vitamines, and unless supplement- ed by some root vegetable or by fruit is incapable of fully taking the place of potatoes.

The turnip is not a very useful or economical food. Its carbohy- drate content is relatively much less than that of potato, being in fact only about five per cent. of its weight. It is very poor, too, in protein. More than ninety per cent. of turnip is water. Carrots and parsnips have greater nutri- tive value than turnips, but less than potatoes. The same is to be said of beet-root. There can be little doubt that land now used in the production of these vegetables could be more usefully employed in the cultivation of potatoes.

It is quite impossible to cover the whole subject of food in a small leaflet, and the effort has been limited to those articles which enter into the dietary of practically everyone. The inten- tion of this leaflet is to set forth the main functions of the different foods in common use, and to indi- cate ways by which economies may be effected in these stressful days. Wastefulness is not commendable at any time and it becomes little short of criminal at a time when the production of food promises to be inadequate to meet the demands. If the policy of thrift in the mat- ter of food were to be generally practised the supply might prove sufficient for actual needs. Obvi- ously, it is of the greatest import- ance that we should not be com- pelled to go on short rations. Com- paratively few can assist in in- creasing the production of food, but everyone may do something to- wards lessening the consumption of food. This, however, should be done as far as possible by a judi- cious re-appointment of the diet scale and by the avoidance of waste, rather than by a reduction in one's food intake below the re- quirements of the body. Short rationing is too serious for consid- eration except in an extremity, and it should be regarded as the patriotic duty of every loyal sub- ject of the crown to do what he or she may be able to avoid so calamitous a necessity. Even full rationing is not without objection- able features. While a ration may be established which provides for absolute requirements, no fixed ration will satisfy the cravings of appetite. This is well demonstrat- ed by the liberal patronage given to the dry canteens of military units.

There are two classes to whom a liberal dietary is essential: chil- dren and young adults, and those engaged in laborious industrial pursuits. We must conserve the life of or children. Improper or insufficient feeding of infants is ac- countable for a large share of our fearful mortality amongst the little ones. Mothers should be impress- ed with the superlative import- ance of breast feeding—both in their own interest and in the in- terest of their children. Nursing mothers, of course, should be lib- erally fed.

While it is possible to substitute one food for another up to a cer- tain point, it must be realized that the limit is soonreached. There- fore in our campaigning for great- er production of foods, considera- tion should be given to a due ap- potionment of the valeties of food to be produced. There is an ele- ment of danger in over-emphasiz- ing the need for potatoes and cer- eals, and neglecting to provide for sufficient yield of the foodstuffs from which we derive the major part of the protein so necessary to nutrition.
