CANADIAN MAKES GREAT IMPRESSION

MONTREAL, Nov. 26.—The Star's London cable says: Nottingham papers devote much space to-day to Hon Mr. Foster's speech there last night. The Guardian says he made a great impression in proof of the one-sidedness and unfairness of Britain's present fiscal system. Leading Chamberlainites, when asked for a reply to Rosebery's question last night as to

why the British government should not retaliate on Canada, seeing that Canada had now become in the last two years a dumper of iron upon British markets, replied that this is obviously a matter for friendly bargaining between Canadian and British ministers. If Mr. Chamberlain is given his mandate, neither Canadian nor Englishmen desire anything else than a fair give and take arrangement.

THE OMNIPRESENT MICROBE IN THE TEETH

The impression has long existed that the decay of the teeth is of modern origin and that our early forefathers knew not the pains of toothache, and retained their teeth to old age. Research has shown this to be an error, and that from the earliest history of man, no disease has been more prevalent and none caused more pain than the decay of the teeth. No race either civilized or uncivilized, has yet been found in which the decay of the teeth was not prevalent. Even the Egyptian mummies show the same decay we see today.

It would naturally be supposed that a disease so prevalent and of such ancient origin, would have been carefully studied and long ago its true cause known. Such is not the case, however, and not till about twenty years ago was the true cause discovered. Speculation as to the cause there had been in abundance, till by the aid of the microscope and his knowledge of Bacteriology, Dr. Miller, now of Berlin, an American dentist showed the decay of the teeth to be due to the action of a germ as truly as in tuberculosis. Dr. Miller showed by experiment that when a piece of meat or other food stuff became lodged between the teeth or in a crevice in a tooth, it very soon became infected by these germs. Here they multiplied by the thousands and as they did so gave off acetic acid. This acid has the power to dissolve the teeth (as can be shown by experiment) and little by little the tooth is eaten away and a fitting place for the lodgment of food and the breeding of more germs is formed and thus the work of destruction goes on. With this explanation it is easy to know why, when one tooth decays it will most likely decay the one alongside of it.

Now knowing the cause of the decay we are in a fair way to do something to combat the disease. Our first task will be to remove the cause, or in other words, keep the teeth free from particles of food. In many cases nature has done much in forming the teeth, so that they are self-cleaning, they being perfectly formed food cannot get between them and their surfaces are smooth, so that any particles of food can readily be removed from them by the action of the lips and tongue. In other cases where nature has not been so kind we must use artificial means to bring about the same state of affairs. This in a great measure can be done by the use of the tooth brush, powders and antiseptic mouth wash and by passing silk floss between the teeth. At times however decay will take place at some point from which the food could not be dislodged. If a careful watch is kept however and before decay has proceeded too far the tooth thoroughly polished at this point the probabilities are, the surface now being smooth no further lodgment will take place and the decay will be arrested. If the decay has proceeded so far that it is impossible to remove it by polishing every particle of decay must be removed and a filling inserted. The filling must be thoroughly polished to give it a smooth surface as if it is left rough particles of food will cling to it which will at once become infected with germs which will attack the nearest tooth structure which will be that at the margin of the filling. The action of a filling in preventing decay is simply that of a stopper. The cavity having been thoroughly cleaned and the filling inserted there are no

germs in it nor can any enter. The surface being smooth and polished any food or germs would be quickly washed away by the saliva and the action of the tongue and lips.

From what has been said the use of the tooth brush and powders is apparent in keeping the teeth clean and polished and of antiseptic washes to prevent the formation of germs.

Only a few seem to realize what the decay of the teeth mean to them. What is more disgusting than a row of decayed teeth or more disfiguring than the sunken cheeks resulting from their loss. The food cannot be properly masticated and indigestion with all its distress and pain follows. The putrid matter from those teeth often renders the breath very offensive and is constantly being swallowed which is not only very disgusting but very injurious to the health.

Crown, bridges, plates, etc., have been a blessing to mankind and are very much better than broken down teeth or no teeth; but no artificial appliance will ever be able to satisfactorily replace the teeth which nature gave us. When we consider how valuable our teeth are and the injury done to ourselves by their decay, is it not worth our while to give them a few moments attention each day?

Always Sick, Constantly Tired
Nerves on Edge. Appetite Poor. Sleep Disturbed—You Need
FERROZONE

"The benefit I derived from Ferrozone," writes Mr. A. P. Whitehead from Montreal, "is really marvellous. For two years I didn't have one day's freedom from nervous headache and pains in the back and side. I consulted doctor in Montreal, but was not helped. I used Ferrozone, and am glad to say my health is better to-day than for many years. I weigh ten pounds more and look and feel stronger. Ferrozone is the best tonic I ever used."
—Mrs. Duncan W. Dunham, of Portland, writes: "Last winter I was attacked by neuralgia and was run down in health. I used all sorts of medicines, but found Ferrozone the best. It brought back my appetite and has made me strong, so that I can't expect to be bothered with neuralgia or weak spells again."
The cures of Ferrozone are interesting because it does its work thoroughly. It is specific for all forms of skin diseases, kidney, liver, and stomach trouble. It cures headache and a rigid feeling in a short time. Ferrozone contains more nourishment and vitalizing properties than you can get in any other way—in short, it assures health and costs but 50c for three weeks treatment, or six boxes for \$2.50. At druggists, or by mail from The Ferrozone Company, Kingston, Ont. Get a supply to-day.

THIRTY MILLIONS RICHER

The Mutual Life of New York

disbursed during the year 1902 over forty-four millions dollars and at the close of the year was thirty millions richer. Its assets are now over four hundred millions dollars (\$400,000,000.) It is purely mutual. It has no stockholder. It has already distributed in dividends over one hundred and five millions of dollars among policy holders. It has a surplus fund now invested out of which it can pay over three millions a year in dividends for the next twenty years—not speaking of the large surpluses accruing every year. It pays to insure in the grand old Mutual of New York.
