SOUTH POLE

(By Canadian Press)

LONDON, Sept. 17.—Under Captain I. M. Davis of Australia, the Discovery has just left on the first leg of its voyage to the Antarctic to continue the research work began in 1911. Sir Douglas Mawson, famous explorer, and the remainder of its party of 12 scientists will be picked up at Cape Town.

A stranger assortment of gear than ever was loaded on Spanish galleon, Elizabethan venture-ship, or pirates' schooner is stowed on the little Discovery, writes a Daily News correspondent. The vessel will chart an unknown coastline, study marine life from the humble sea-worm to the "leviathan of the deep," and prospect the coastal valley.

For example, there are about 20 gross of empty bottles—bottles all shapes, sizes and costliness, from five ounce milk bottles for sea-water samples to intricate brass Ekman bottle for deep sea study. Some of these bottles are of fine workmanship, made with many chambers of heavy brass, some are coated with silver. Some may be sent nearly four miles down into icy, briny depths, there to take in a specimen of sea-water. A brass "messenger" then sent down the wire will seal them; their contents will be carefully recorded, rebottled, labelled and stored for further examination on return.

An oceanographer will determine the chemical and physical properties of the water, while a marine biologist or "planktologist" will examine the minute forms of life which swarm therein, for this "plankton," as it is called, is the food of small fish, which in their turn feed larger ones—including whales.

More numerous than the bottles are cigarettes; 100,000 are being taken. Half a ton of suit, however, was too much for the cook; the amount was cut down. There will be trawling nets of many different makes and meshes, from the finest silk to the coarse rope of Otter and Monogastue trawls.

Plane wire is another important item; there will be more than 20 miles of it, for sounding depths. A new sounding method will also be used—the Echo sounder. This emits a tap from the hull of the ship, sound waves radiating in all directions. Those that finally "hit the floor" of the ocean are echoed back, and from the length of the time between tapping and receiving the echo the instrument calculates and records the depths on a dial plate.

Other items of equipment include a Moth aeroplane fitted with wireless, which is to be the "long arm" of the expedition; an elaborate short-wave transmitting set; sets of chessmen, and a phonograph.

There is an Owen's Dufour Counter, to determine the amount of dust in the Antarctic—an important factor to meteorologists. Bottom Ooze Samplers will collect ooze from the sea floor.

A few sledges are being taken, but no dogs. The work being mostly coastal and oceanographic, only "day excursions" will be made ashore.

ON YOUR DESK!

With their beautiful designs and lovely colour combinations, Waterman's Desk Fountain Sets are pleasingly ornamental on the spinnet, the secretaire, or the busy executive desk... but, as perfect writing instruments, they are much more useful than ornamental.

Some have bases of Pedrara, Etia, Argentine (Green) and French Onyx... some are mounted in black and gold, (Italian) Numidian and Brecke Roy Marble... some have single Fountain Pens, others have two... and all have those long, artistic holders which taper to a point. You can also have the famous No. 7 Pen-Points in many models of Waterman's Fountain Pen Sets for the Desk.

Have your dealer show you the complete range of Waterman's Desk Sets.

commission yesterday," said Mr. Vining, to the Commissioner, "the individuals I represent and who constitute the membership of the A. B. C. Local 114, asked me to make representations to you to that effect today.

"Acting on my advice they decided to withdraw from the A. B. C. and asked me to meet them to discuss the situation. "I did not remain at the meeting yesterday, but I am told every individual there, I believe all the members of the London Local, expressed their determination to withdraw from the A. B. C."

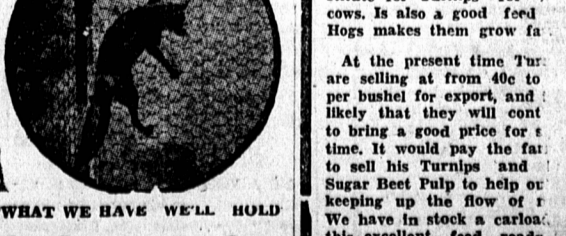

"Did they surrender their charter?" asked L. W. Griffiths, counsel for the Commission. "It ceases to be a charter," said Mr. Vining, "when there ceases to be a membership of seven. So far as they are concerned the local no longer exists."

Commissioner Waldron said he was glad the members had decided to consult "a better lawyer of conscience" and that such a result had come about.
