Crop Report

WINNIPEG Man., June 28 — Light showers to good rains have occurred at many points in Western Canada during the past week, but in Southern and Central Manitoba and central Saskatchewan moisture is still insufficient for normal crop development. Many points in these sections report wheat in short blade six to ten inches in height and a few earlier crops in Manitoba are heading out from ten to fourteen inches in height. Points which have not received recent rains show further crop deterioration, particularly in Manitoba, and without further immediate precipitation, partial crop failure is in prospect in a number of sections according to the weekly crop report of the Department of Agriculture, of the Canadian National Railways.

Five hundred acres of sugar beets in Southern Manitoba are being ploughed up and reseed. to coarse grains owing to lack of moisture, weeds and cut worm. Points between Greenway and Deloraine indicate that crops will be twenty five to thirty five per-cent lighter this year without immediate heavy rainfall. All late sown crops, however, are showing deterioration.

Conditions are still satisfactory in Northern Manitoba. Rains occurred at all points on the Regina division but were insufficient to warrant enthusiasm as to crop prospects at many points.

Rains have improved crops from Watrous to Melville where wheat is now six to eight inches in height. Around Saskatoon crops which promised to be light received a twelve hour rain which should ensure improvement generally. Around Dodsland, Rosetown, Elrose and Tribune territories conditions appear considerably better than for the past year or two, and normal crops may be expected if conditions remain good.

In northern Saskatchewan good rains within ten days will assure an average crop in this section. Grain is up to ten inches in height and summer fallowing sixty five per cent completed.

Heavy precipitation occurred in Eastern and Central Alberta, ranging from a quarter of an inch to over two inches. Moisture conditions are now good over this entire territory and sufficient for two weeks. Marked improvement in crops has resulted and indications point to good harvest. Crops are up to fifteen inches in height.

Around Edmonton moisture conditions are still very satisfactory with an abundance of moisture west of Edmonton. Growth of grain and pastures is heavy and rapid. early sown wheat is in the shot blade while oats are six inches in height. Summer fallowing is seventy per cent completed in this section. Haying will start in the next week or two.

Good rains were received in all areas north of Edmonton improving conditions generally and all crops now look in excellent condition, wheat being generally in shot blade and ten to fourteen inches in height.

Okanagan reports weather cool and showery with heavy winds cherries are not ripening as fast as expected but have not been damaged as yet.
