HOME GUARD SHOOT

At Kensington Range on Saturday afternoon a number of the Home Guard members had a practice shoot at one and two hundred yards range, about 25 members being present. A good deal of interest was taken in the shooting owing to the fact that Mr. G. F. Hutchison had donated a silver medal for the best score. Under the able direction of Veteran shots, such as Captain Landrian, E. G. Love, and James Coached, five shots at 100 yards and five at 200, with a sighting shot at each range were allowed. When one takes into consideration that the majority of the men had not had any practice with the militia rifle the following scores of a possible 50 are excellent marksmanship for the first practice:

C. R. Harper, 33

A CHEMICAL PROCESS

Since the extensive introduction of aluminium ware, the housewife has consigned the silver polishing kit of grandmother to the scrap heap, having found that silver is more easily whitened by boiling the ware in an aluminium vessel.

As the brightening does not take place in pure water, it is necessary to add a small amount of salt or soda to the water used. The removing of the tarnish is a chemical process and results from galvanic action.

Before cleaning, the silver and aluminium must be thoroughly cleansed of grease by the use of warm soap suds.

A small amount of aluminium is dissolved during the process and the vessel will be darkened, though this coloration is easily removed by scouring or by cooking fruit in the vessel.

This method of whitening silverware is accompanied by no loss of silver and is therefore preferable to the silver polish method which should never be used on plated ware. Many polishes contain material detrimental to silver and scouring will not brighten on the indentations, engravings, etc., which, when free from grease, will be thoroughly whitened by this process.

Equally as good results may be obtained by boiling the silver with a piece of zinc in diluted salt water, using any available container, the only precaution necessary is that the silver must be in contact with the zinc, as is also necessary when aluminium is used. For this reason, a piece of sheet zinc large enough to nearly cover the bottom of the containing vessel is desirable.

The size of article cleaned is limited only by the depth of water. After whitening, the silver may be brightened by rubbing with a suitable cloth.

Paynter, Burlington, to spend a pleasant afternoon in honor of Mr. and Mrs. Thomas Paynter, N. B., who have been visiting on the island for the past five weeks. After a very sumptuous repast had been partaken of by all present, the evening was very pleasantly passed in music, singing and recitations, followed by speeches from many of the gentlemen present. A very hearty vote of thanks was tendered Mr. and Mrs. Wm. J. Paynter for their kindness and hospitality in extending such a hearty welcome to all the friends who gathered on the old homestead that afternoon, and after singing "For He's a Jolly Good Fellow," and "God Save the King, all dispersed to their respective homes, feeling that a very sociable afternoon had been spent.

CLEAR SOUP.

Four pounds of shin of beef, two pounds of knuckle of veal. Cut the meat off the bones in pieces about a quarter of a pound each, and break the bones in four or five pieces. Have ready your stock pot, put into it one ounce of butter, let it just warm, then place the meat at the bottom of the pot, with the bones. Let this fry very slowly, for one and a half hours, turning the meat two or three times till it is nicely browned. It must not be allowed to burn, and the pot must be kept covered. The bottom of the pot should be covered by a rich thick gravy. Now add to it five parts of boiling water, let it boil, then throw in a teacup of cold water to accelerate the rising of the scum. If this operation is repeated three times it should make a clear consommé.

Have ready two carrots, two turnips, two onions stuck with three cloves, one head of celery, two leeks, one ounce of salt, a faggot of herbs weighing about one ounce and consisting of parsley, thyme, marjoram, tarragon. Put these all in the soup and allow it to simmer four or five hours. When cold carefully remove all fat. The meat from the stock will bear another addition of water, about three quarts, and will boil again for common soup.
