

# RECIPE FOR COOLTH

- 1...take one tumbler or glass
- 2...half-fill same with cold water
- 3...throw in dash of Eno's 'Fruit Salt'
- 4...drink while sparkling
- 5...time for taking:-  
any time you want to feel cooler!

Handy Size, 50c—Household Size, 85c

## Eno's Fruit Salt

## SYSTEM MAY BE REORGANIZED

### Government May Change Plan of Carrying For Single Unemployed Men.

OTTAWA, June 9—(CP)—No appointments were made yesterday to the numerous senatorial and other vacancies which the Government has to fill, but it is anticipated that several will be announced before the end of the week. In the case of those who are now members of Parliament and are to be appointed to the Senate or other positions within the gift of the Government, and there are said to be quite a few, it will be necessary to have the air cleared so that conventions to select new candidates in their ridings may be held.

There are 17 Senate vacancies and a score of other important offices, running into the highest salaried class, to be filled. Several deputy ministers are to be appointed. Meanwhile the relief camp difficulties overshadow other political activities, and it is understood a movement is on foot to reorganize the system of caring for single unemployed men. Efforts may be made to secure employment for them on farming and other labor undertakings, with the money that would otherwise be spent on their maintenance going toward their wages.

According to reports reaching the Government today, there is an increasing demand for labor on western farms and great difficulty in securing laborers. Prime Minister B. Bennett was advised today that a call for 500 workers was ignored by the relief camp strikers in Winnipeg.

Cabinet council spent the morning wrestling with this problem and during the day Government representatives discussed the matter with strikers in Valcartier, Que., and Rockcliffe, near Ottawa. Some announcement is expected on Government policy today.

R. B. Bennett is expected to leave by the end of the week on a holiday which he will spend with his sister, wife of Hon. W. D. Herridge, Canadian minister to Washington, at their summer home in St. Andrews, N. B. But no decision has been reached and Mr. Bennett declares that, much as he needs rest, he will not leave Ottawa until some progress has been made in settling the discontent in the camps which the Government declares to be the work of agitators.

So far as could be learned yesterday the organization of a new political party headed by Hon. R. H. Stevens, former Ottawa until some progress has been made in settling the discontent in the camps which the Government declares to be the work of agitators.

### Will Foretell Weather Probs Farther Ahead

OTTAWA, July 9—A man of science sits in the Dominion Observatory here making investigations and compiling records that he hopes will some day bring long-range forecasts of weather conditions over Canada. He has been keeping the records for years but they are still too incomplete to permit more than vague conclusions.

The man, Dr. Ralph E. DeLury, assistant director of the observatory in charge of solar physics, believes vast storms that occur in regular phases across the sun's surface have a definite effect on earth, influencing to a degree at present undetermined accurately, rainfall, average temperature, plant growth and the lives of insects, animals and men.

Sunspots are attended by large, bright, high-flying clouds in the sun's atmosphere emitting such quantities of ultra-violet rays that, when spots are most plentiful ultra-violet light reaching the earth may be double the amount received when they are scarce.

Dr. DeLury's observations have led to guarded conclusions that the effect of sunspots which occur in cycles of about 11.1 years varies with the nature of the country, while the record is obscured to some extent by occurrence of local phenomena that render precise investigation difficult.

In a paper on Dr. DeLury's work the department of the interior says some effects of sunspots on the earth are indicated clearly. Observations show temperatures throughout the country are higher when there are few sunspots and lower when many appear. The greatest range between the sunspot minimum and maximum is four degrees Fahrenheit, the least one degree and the average for the country two degrees. The greatest variation has been observed at Calgary.

Observations at the Toronto bureau of the Meteorological Service of Canada show about 30 per cent more thunderstorms occur at the sunspot minimum than at the maximum. The observatory draws the conclusion that the forest fire hazard from lightning varies accordingly.

Inland more rain falls at sunspot minima. The Prairie Provinces' record shows about 50 per cent more rain falls at the minimum than at the maximum. The reverse happens at coastal points, observations at St. Johns, Nfld., show.

Growth rings of trees, numbers of grasshoppers, grouse and rabbits are greater at or near sunspot minima than at the maxima. Near the minima prairie wheat records show an increase in bushels per acre of from 17 to 27 in wheat, oats, barley and rye. This observation covers the cycles between 1908 and 1928. In the same period and in the same way potatoes showed a yield variation of 25 per cent.

Dr. DeLury's observations show the last sunspot minimum occurred near the end of 1933 and that the next maximum should come about the middle of 1935. That year the average temperature of the country should be lower, fewer thunderstorms should occur, less rain should fall inland, but more on the coasts. There should be fewer grasshoppers, grouse and rabbits.

**NOT BAD ERNIE! BUT NO WONDER! THERE IS MORE ENERGY AND BETTER BALANCED NOURISHMENT IN FOUR HEAPING TEASPOONS OF GRAPE-NUTS WITH MILK THAN THERE IS IN A SERVING OF LIVER AND BACON.**

And not only is Grape-Nuts highly nourishing, but it's also one of the most delicious dishes ever brought to breakfast! Easy to digest. Beneficial to teeth and gums because you like to chew it. Costs only about one cent a serving. Get a package.

### Life Lengthens In Average Man

LONDON, July 9—Many authorities agree the most striking feature of the romance of scientific development in King George's reign is the increase of the expectation of life as the result of advances in medicine, engineering and chemistry.

An outline of this development was given by Sir Frank Smith, secretary of the Department of Scientific and Industrial Research, in an address to the Society of Engineers in London. The average increase in the expectancy of life in the past 25 years, he said, was 6 1-2 years.

"Indeed, there are probably tens of thousands of people who saw His Majesty's Jubilee procession who would have been dead had it not been for the application of knowledge gained in the spheres of medicine, engineering, and chemistry." Increase in the span of human life had come about by such things as better water supplies, hygiene and surgery, Sir Frank said.

### Heroism Honors Go to Maritimes

HAMILTON, Ont., July 8—Seven parchment certificates of the Royal Canadian Humane Association go to New Brunswick and Nova Scotia, men in recognition of heroism and presence of mind in assisting in the rescue of persons from drowning.

Raymond Gilks and Frederick Grant of Barkers Point, N. B., are cited for assisting in a rescue in the Saint John River, May 8, 1935.

John Nickerson, Russell Sears, and Ashton Waybret of Shag Harbor, N. S., will receive the parchment for going to the assistance of a number of men in danger off that point Feb. 17, 1935.

For saving life in McEachran's Lake, N. S., May 7, 1934, Thomas Roper of New Glasgow is also awarded the certificate.

Awards by the association in various parts of Canada totalled nine bronze medals, two bars and 20 parchments.

Canadian macaroni is becoming a favourite dish in China. In 1934 the imports of Canadian macaroni into Hongkong were greater than the combined imports from Italy and France.

### Hide Great Seal In Flower Beds

LONDON, July 9—The custody of the Great Seal, which passed from Lord Sankey to Lord Halsburn, the new Lord High Chancellor, in the recent changes in the government, has given some uneasy moments to sundry Lord Chancellors of the past.

More than once the symbol of authority has been stolen, and on one occasion it was not recovered. James II, while flying from Whitehall, hid the Great Seal into the Thames, whence a fisherman recovered it by chance many weeks later. Once when Lord Brougham was in Scotland the Great Seal was abstracted from his room by playful young ladies who, on beholding his extreme distress, sent him to find it by a game of "hot and cold" in the family tea-caddy.

In 1812, when Lord Eldon's house took fire, Eldon himself rushed out with the Great Seal and buried it in safety in a flower-bed. In the excitement he forgot the hiding-place, and after the fire was extinguished the whole family had to set to and dig with sticks in the various beds until it was located.

### Balkans Dispute Over Air Stamps

PRAHA, July 9—Czechoslovakia is at philatelic odds with Hungary over two Hungarian air mail stamps with the result that the respective postal ministries no longer recognize the validity of each other's stamps.

The quarrel started with the formal notification of the Czech authorities to the Hungarian ministry that letters with the Hungarian air mail stamps of 20 and 40 keller, bearing the overprint "Justice for Hungary," will henceforth be returned as "inadmissible."

Czechoslovakia feels offended by the overprint, for some of the Czech territory formerly belonged to Hungary.

Budapest, however, was quick in throwing the gauntlet down on Praha by forbidding Czech mail with 26 and 30 haleru stamps to be delivered in Germany.
