COMEDY — CHAPT. 12 — "CONGO BILL"

THE EASTERN GUARDIAN

AGENTS: MONTAGUE: Harold F. Landry, Albert Aiklen, Mrs. Byron Stewart, Miss Harriet Clair. AGENT GEORGETOWN: Walden Love.

The Guardian may be bought at any of the following places in Montague: Miss S. A. Llewellyn; Mrs. O. J. in Georgetown: The Post Office; in Souris: Condon's and Florence Roper; in St. Peter's: The Post Office.

CURLING CLUB — On Tuesday night a special general meeting of the Montague Curling Club was held at the club room with the president, Mr. Keir Clark, presiding. The secretary, C. St. Clair Trainor, explained that the purpose of the meeting was to choose skips and players for the Gaboury and MacArthur Trophy competition to be held in Charlottetown on April 1st. Skips chosen included Dr. L. A. Johnston, F. G. MacIntyre, George Gordon and Bruce MacLean. Each skip will select the members of his own team. For the Gaboury Cup two games will be played in the morning, one in the afternoon, and one in the evening. For the MacArthur Trophy, a challenge trophy, two games will be played in the afternoon. Last year Montague lost the MacArthur Cup to Charlottetown, but retained the Gaboury cup, which they will defend again this year. Last year it was successfully defended by a team skipped by George Gordon, and it is hoped that he will repeat the performance again this year. It was also decided that the club would hold its annual banquet early in April, and Mr. L. H. Poole was appointed chairman of the committee to make preparations for the event which is considered as the official wind-up of the curling season. This year, although the season was short, the members played a considerable amount of curling since the ice remained good once there was sufficient of it, and in the many competitions the members gave a good account of themselves, which indicates that the juniors are also taking a very active interest in the club. It is possible that next year the club may have a bigger and better year.

DID YOU KNOW that Tip Top Tailors still offers you the Dominion's widest selection of woollens—Both English and Domestic? That Tip Top Tailors never have reduced their quality but on the contrary have continually increased it? Why not come in soon and be measured for your next suit? A. F. Campbell, Montague.

DARLINGTON W.I.

The March meeting of Darlington W. I. was held at the home of Mrs. Donald MacPherson. Meeting opened by singing the Ode followed by the Creed in unison. The minutes of the last meeting was read and approved. Roll call was answered by 5 members. One member paid her dues. The Sick committee reported fruit sent to sick. It was reported that the school had been scrubbed. Mrs. Nell Campbell was appointed on the Sick Committee. One pair of pyjamas and one toque was passed in for the Red Cross. Mrs. Angus MacPherson and Mrs. Lloyd MacLeod were appointed on Program Committee for next meeting. Correspondence received from the Red Cross and DeBlols Bros., and the Institute News were read and discussed. Collection amounted to 35 cents. Roll call to be answered next meeting by another article for the Auction Sale. A program of contests and "Twenty Questions" was put on by the committee in charge. Meeting closed with the King, after which lunch was served by the hostess.

Cleaning Up The Storage

Unsanitary conditions in the storage cause destruction to the building as well as harmful effects to the stored products, says W.R. Phillips, Division of Horticulture, Central Experimental Farm, Ottawa, Ont. Decayed apples, potatoe or other refuse forms a breeding area for moulds, yeasts and possibly bacteria. These organisms spread to doors, frames, joists or other wooden parts. Once they have penetrated these structures, they may grow rapidly and cause general deterioration. While growing these organisms cause musty, stale odours which may eventually penetrate sound produce bringing objectionable taints. Progressive storage operators who want to reduce maintenance costs, and maintain high quality standards in their products, will adopt sanitary precautions. It is not only profitable, but is good advertising to have a fresh, clean storage.

Georgetown and Vicinity

Master Harold MacLean is visiting his aunt, Mrs. Plus Fitzpatrick of Newport—Geo.

Miss Margaret MacCarron of Charlottetown was a guest early in the week of her sister, Mrs. Raymond Lavandier.

Mrs. Thomas Murphy of St. Mary's Road is visiting at the home of her son-in-law and daughter, Mr. and Mrs. Frank Lavandier.

Mrs. Walter MacLean and daughter Marie are visiting in Charlottetown, where they are the guests of Mr. and Mrs. Alec Arsenault.

Miss Helen Wood of the office staff of Stewart's Bakery in Charlottetown, was a recent guest of her parents, Mr. and Mrs. W. T. Wood.

Mrs. William Hook left on Tuesday on return to her home in Charlottetown after a visit at the home of her brother and his wife, Mr. and Mrs. Frank Lavandier.

Mr. John Batchelder left on Wednesday enroute for Pictou, where he will take up his duties as watchman on the S. S. Charles A. Dunning. He was accompanied as far as the city by Mrs. Batchelder who will visit there for a few days.

Two of our local coal dealers, Mr. S. C. Knight and Mr. William S. Martell, had truckmen and shovellers engaged during the early part of the week in unloading two cars of coal and making delivery to their many customers. As the snow is practically all disappeared from our streets, the trucking was done by horse and cart.

clover as 2,4-D does not appear to remain in the soil for more than two months at the most.

Spraying should be done before the weeds are in bloom and preferably before they reach the budding stage. In the Fredericton district this is usually no later than the middle of June for buttercups.

Good results have been secured at Fredericton with the Sodium salt formulation of 2,4-D. The form used does not appear to be as important as the amount used. Since so many different brands are offered for sale, each containing a different percentage of 2,4-D, care should be taken to put on the right amount of actual 2,4-D acid per acre.

white clover is practically non-existent in the fertilized pastures at Fredericton, due to winter-killing or other causes. It would seem advisable to take advantage of such years to get rid of troublesome perennial weeds in pastures by spraying with a heavy dose of 2,4-D such as two pounds of acid per acre. There would then be no possibility of damaging the white

Girl Guide News

More About The Brownies

The two Packs of Summerside met together for the Brownie Shield competition and what a lively and active crowd they were. The 1st and 2nd Pack with Brown Owl Mrs. Maurice Mill, Tawny Owls, Betty Tredennick and Marian Rogers was made up of Fairies, Pixies, Sprites and Elves, with Six-Nicholson, Katherine Estey, Elizabeth and Elizabeth Campbell. There were thirty seven in the Pack and all looked very smart in complete uniforms. Parents had been invited and took a great interest in the Brownie programme. As the visitors, Mrs. D. C. Tompkins, Commissioner, Miss Arsenault, Commissioner, and the Field Secretary entered the Hall a great big "Grand Howl" was given by all the Brownies and what a Howl!! Mrs. Tompkins conducted an enrollment ceremony for recruits from the 1st and 2nd Pack and the following girls made their Promise at the Toadstool: Paula Ferry, Patsey Noonan, Eileen Sullivan, Catherine McDonald, Eliz. Gallant, Anne Huestis, Sandra Schurman. The Brownies all welcomed the new girls by giving them a "Grand Howl." Sixers from the 1st and 2nd Pack introduced the new Brownies in a very pretty and correct manner to Mrs. Tompkins and Brown Owl Miss Margaret Wedge and Tawny Owl Miss Joan McPhee must have spent considerable time in training these little girls and are to be congratulated. The main event of the afternoon was the judging of the Brownie singing contest. Both Packs did very well indeed and are worthy of high praise. They surely had lots of enthusiasm and were quite musical. After the singing all the Brownies gathered around for a story from Mrs. Tompkins. Miss Wedge displayed some fine needlework done by the 1st and 2nd Pack, Carmella Gallant and Margaret Gallant showing the neatest articles. I am sure that we must soon be having lots of Golden Bars and even Hands from these two Packs. How about it Brownies? The Sixers responsible for the enrollment of new recruits were, 1st and 2nd Pack:

P. W. C. Graduates

GEORGE McCoubrey ANDREW son of Mr. and Mrs. Blair Andrew, New Glasgow, George entered P. W. C. in 1945. He played on the first team in both football and hockey, and is treasurer of the Students' Council. George intends to obtain a degree in Physical Education. NETTIE KATHERINE AULD daughter of Mrs. Auld and the late Mr. Brewer Auld, Freetown, Kay enrolled in the Special Matriculation Class in P. W. C. in 1946 and has continued her good work. Kay hopes to enter the University of Toronto to study Occupational Therapy. Photos by Craswell.

Spring Freshet At Power Plant

The above picture shows the torrent of water pouring from the waste water gate at the Power House near Montague. This well known fishing spot is hardly recognizable this time of year due to the volume of water.

ANNOUNCEMENT

The Pure Milk Company Ltd., realizing the great decrease in the consumption of milk, due to increased prices, is proud to present to the citizens of Charlottetown a new product, skim milk, which will conform more readily with the average person's purchasing ability.

Skim milk, which is now on the market labelled Garden City Fat Free Milk has all the nutritional value of whole milk except the fat and the Pure Milk Company feels its availability at 10 cents per quart will be greatly appreciated.

Health officials everywhere are perturbed over the decrease in milk consumption, especially among children, and it is to alter such a situation that fat free milk is now made available.

Fat free milk is on sale now and the Garden City drivers will have the new product available on all routes. You are encouraged to buy tickets—10 for one dollar.

The sale of fat free milk has the hearty endorsement of both Federal and Provincial Health Departments as the following testimonials show.

Says Dr. L. B. Pett, Chief of Nutrition Division, Dept. National Health and Welfare: "So far as the nutritional value of skimmed milk is concerned, I am emphatically on record that it contains the greater part of the food value of the milk and that its use should be encouraged."

Dr. J. H. Shaw, Provincial Pathologist and Dr. B. C. Keeping, Chief Health Officer add the following comment "We have no hesitation in stating that milk should not be consumed primarily for its butter-fat content.

"The important and most nutritional value of milk lies in the solids, not in the fats. The solids contain such component parts as protein, calcium, phosphorus, iron, thiamine, riboflavin, niacin, and ascorbic acid. These are equally present in "skimmed" milk and whole milk.

"It has been noted that during the past several months there has been a decline in the household consumption of milk throughout Canada. This is no doubt due to the rising cost of milk. If fat-free milk can be made more readily available, especially to growing children, it is compatible with good public health."

FIREPLACE FURNACE

Wonderful Heater. How does it do it—draws the cold air out of the room into itself—heats it and sends it back into the room as hot air—a double heater. This accounts for its great heating power. The old fireplace sent most of its heat out through the chimney to heat the outside world. Send for literature and learn about this fuel saver, a great inexpensive comfort in your summer cottage. Sold by Hardware, Builders, Contractors and Building Material Dealers. Fits a long felt want—a hot seller. Dealers Wanted TWEED STEEL WORKS LIMITED TWEED, ONT.

Control of Weeds In Pastures

Many permanent pastures in New Brunswick are not producing to capacity, due partly to the presence of many weeds. The fertilized pastures at the Dominion Experimental Station, Fredericton, N.B., suffered from this condition in the past, says T.C. Chaisson. In these fertilized pastures, buttercups had become quite prevalent and troublesome and were difficult to eradicate as they spread rapidly. Canada thistles in some areas were also becoming a nuisance and other weeds, such as fall dandelions, hawkweeds, common dandelions and plantains were also fairly plentiful. With the use of 2,4-D in recent years it now appears likely that perennial weeds in permanent pastures can be brought under control effectively and more cheaply than by any method known previously. Some pasture weeds, such as common dandelions, fall dandelions and plantains can be killed almost completely by one application of 2,4-D at the rate of one pound of free 2,4-D acid per acre, applied before the weeds come into bloom. However, buttercups and Canada thistle cannot be satisfactorily eliminated at this rate, as experiments at the Fredericton Station have shown that this one application will kill only about half of the buttercups and perhaps less of the thistles. But when the rate was doubled, that is, two pounds of 2,4-D acid were applied per acre, practically all the buttercups and thistles were killed with one spraying. Two acres badly infested with buttercups and a thick stand of thistles in some parts were sprayed during the summer of 1948 with the above results. It should be noted that at the rate of two pounds of 2,4-D acid per acre, practically all the white clover was killed, but this does not appear to be alarming, as with proper fertilization and grazing, white clover will undoubtedly become re-established. It should also be noted that some years white clover is practically non-existent in the fertilized pastures at Fredericton, due to winter-killing or other causes. It would seem advisable to take advantage of such years to get rid of troublesome perennial weeds in pastures by spraying with a heavy dose of 2,4-D such as two pounds of acid per acre. There would then be no possibility of damaging the white
