

Of all forms of Chewing Tobacco the PLUG is the best!

P. E. I. Potatoes are unsurpassed

They are unexcelled for flavour and keeping qualities. The big majority of those who enjoy Chewing Tobacco prefer BIG BEN for these same qualities. Being in plug form, BIG BEN keeps fresh and moist; does not dry out, chip or crumble. It is always in the best possible condition for chewing; there is no waste; and the plug is more convenient to carry in the pocket.

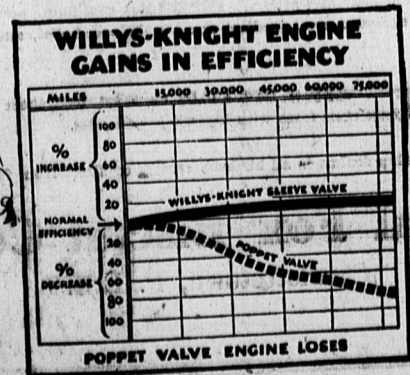

Your dealer sells BIG BEN by the plug and by the Vacuum (air-tight) Tin

### Scientific Facts

#### NEWEST NOTES OF SCIENCE

Fifteen states have enacted laws to protect native wild flowers. Argentina is the leading grape producing country of Latin America.

The fifteenth anniversary of the invention of the phonograph occurs next month.

A machine that measures the punching forces of boxers has been invented by a German.

A new tool to be mounted on an electric drill saws circular holes through metal or wood.

New units of weights and measure based upon metric standards have been adopted in Afghanistan.

By pressing a plunger in a new attachment for milk bottles their contents are forced out a spout.

According to a German scientist the sense of smell is the bee's chief guide in hunting for honey.

A new hanger for an electric current outlet box can be attached to a ceiling or wall with a single nail.

Electric lights to attract insects that fall into vats of water are used in Japan to protect rice fields.

Paris has adopted portable signals that can be moved to where they are most needed to control street traffic.

Monthly calendar sheet for five years are included in a glass paper weight designed for business men's desks.

Compressed air supplied by a central plant operates most of the machinery in a group of 11 coal mines in Wales.

The various telegraph and telephone companies of the United States require more than 4,000,000 new poles a year.

There are about 30,000 miles of commercial air routes in operation in Europe and several additional lines are planned.

Separate lines of rubber type, each its own backing, make up new rubber stamp that can be changed for various uses.

Built in Germany for service between Scandinavian ports, a new seaplane can carry ten passengers and a crew of three men.

Withstanding hard knocks, a portable stethoscope has been specially designed to locate causes of unusual noise in machinery.

Goggles invented by an Englishman to wear under water are water tight, providing air spaces between the lenses and wearers' eyes.

Apparatus using a familiar principle of radio has been developed to measure the thickness of rubber sheet in thousandths of an inch.

Producing ultraviolet rays, a special type of quartz lamp, has been designed in Germany to enable jewelers to detect imitation pearls.

Made in disk form, a new device on which to record the gasoline and oil purchased for an automobile can be carried on the steering wheel.

Two French engineers are studying the passage of radio waves through the higher atmosphere by sending broadcasting stations up on balloons.

Desire for seclusion prompted the designing of a windowless residence having solid walls and lighted through the roof, in a California town.

The government of Czechoslovakia plans to create a national nitrogen industry to meet the entire demand of that country for that fertilizer.

Compressed carbon dioxide snow as been found to work successfully in railroad refrigerator cars, saving much of the space required for ice.

Crystals of a deadly chemical are inserted in the walls of a safe of German invention to release a poisonous gas when heated by a thief's drill.

A California naturalist has invented a transparent case in which birds kept as museum specimens can be examined from all sides without handling.

London's third international exhibition of inventions, intended to bring inventors and prospective purchasers together, will be held in October.

Children are seated on figures of horses in a new swing that is designed as a muscle builder as the riders pull levers with their arms to move it.

With a population of 14,000,000 Czechoslovakia has 14,600,999 acres of arable land, of which more than one half was planted in grain this year.

Pressing a knob opens a spring controlled cover for new ash receivers for the use of smokers from which the contents cannot be spilled nor blown.

New apparatus of German invention to fight oil fires pumps water through tanks filled with powdered soap, with which it is churned to form suds.

Pocket telephone equipment invented by a Boston policeman is featured by a sensitive disk that can be attached to a wall, door or window pane to pick up conversation on the other side.

The city of Nassau, Bahamas will obtain a new water supply by digging a large number of shallow wells over a wide area, the fresh water in each being underlaid by water that is saline.

To prevent it hindering approaching drivers a new spot light is cut out with a slight motion, but it also can be used as a trouble light or to illuminate the road behind a car.

French engineers have designed binoculars to be used in connection with drawing boards so that contours or distant objects can be accurately followed with the hand as drawings are made.

Government chemists have patented and given to the public a formula for making a paint remover from oil obtained as a byproduct of the manufacture of paper pulp from wood and heretofore wasted.

An airplane that can be driven if necessary by one of its two motors has been designed for an aerial prospecting expedition that will seek copper and other mineral deposits in northern Rhodesia.

A Georgia inventor claims to eliminate both tubes and batteries from radio sets with a pile of bismuth plates, protected against corrosion with sulphur, wound with a pick up coil of insulated wire.

French interests have begun erection of wireless and radio stations at Angora, and Constantinople and a company with a 40-year concession has been formed at the latter city to develop both forms of communication.
