Bruins Pound Out 7-2 Win Over Hershey

HERSHEY, Pa., Oct. 23—(AP)—Boston Bruins, champions of the National Hockey League, rallied in the last period and pounded out a 7-2 victory over Hershey Bears of the International-American Hockey League in an exhibition game tonight.

Roy Conacher scored for the Bruins in the second period after the Bears had held them scoreless for 23 minutes and seven seconds.

At the start of the third period Bobby Bauer scored twice in the first minute for Boston. Cain added another in 2:20. Roulston gave the Bears their first goal by scoring in 3:28 with the aid of Red Hamill. Conacher, Hill and Dumart added three more in 45 seconds for Boston. Pettinger gave the Bears their final goal in 13:22.

Canadiens, New Haven Eagles Battle To Draw

ST. HYACINTHE, Oct. 23—(CP)—No quarter was given and none was asked tonight as Montreal Canadiens of the National Hockey League and New Haven Eagles of the American League literally and figuratively battled through seventy minutes to a 3-3 draw in an exhibition game before about 700 fans. The Eagles led the way, came from behind in the third period to score twice and send the game into overtime after Canadiens had run up a 3-1 lead on goals by Paul Haynes, Toe Blake and Tony Demers. Marcel Tremblay blazed in the two goals that tied the score for the Eagles in the third period.

Striped Bass Wins Favour As Sport

In recent years fishing for striped sea bass has become an outstanding sport and the Atlantic Coast. Among the more favoured localities for this sport is the Annapolis river in Nova Scotia where excellent fishing is obtainable in the tidal waters adjacent to Annapolis Royal.

Recently, according to information supplied the Dominion Department Inspector in the Annapolis district, fishing has been most successful. Among catches taken with rod and line was a 29 1/2 pound fish. Commenting on this catch the inspector says, "It is believed to be the largest ever taken here with rod and line."

The sea bass (*Roccus lineatus*), or striped bass as it is known in many localities, is a game fish native of the Atlantic coast and occurs from the St. Lawrence river to the Gulf of Mexico. It is a coast-wise fish and spawning runs in streams in the spring. A number of these fish were taken from Atlantic waters and planted in Pacific coastal waters many years ago and the species now occurs also in the waters of that coast from California to Alaska. In addition to being prized as a game fish, striped bass are also taken by commercial fishermen by use of nets. They are good food fish and enjoy a fair market demand.

In colour the fish is silver with a brassy tinge. Seven continuous blackish stripes along the side give the fish its name. It should not be confused with the offshore sea bass (*Centropomus striatulus*), an entirely different variety. This latter species occurs mainly in United States waters from Cape Cod to Florida. It is a bottom feeder and while taken with hook and line is not regarded as a sport fish. It does not occur in Canadian waters.

As women's years increase so do their wishes.

Shore's Indians Take Second Loss From Ottawa

OTTAWA, Oct. 23—(CP)—Eddie Shore's Springfield Indians, in the American Hockey League, took their second drubbing of the season from Ottawa Senators of the Quebec Senior League tonight when they suffered a 3-2 setback at Ottawa stadium.

The game was fast and rough from start to finish, the referees handing out 19 penalties, eight to Senators and 11 to Springfield.

One was a 10-minute misconduct to Shore, imposed in the final period when he pushed referee Kenny Bremer after Bremer had warned Freddy Hunt, a Springfield player, to the penalty box.

Empire Leads Germany In Science

OTTAWA, Oct. 23—(CP)—Dean C. Mackenzie, acting president of the National Research Council of Canada, said tonight he was convinced that while disadvantages may arise some advantages over Germany in the political, financial and economic control of a world-wide scientific activities.

"There is a growing amount of research and development work going on in the fields of aeronautics, physics, chemistry and electrical engineering," he said, "and with the active steps being taken for the direct defence of our shores, the demands for more and more scientific research and development work in Canada will increase. That Canadian institutions can and will meet such demands is admitted by all."

The total marketed value of Canadian fishery production in 1939 was \$40,073,000, roundly speaking, compared with \$40,492,976 in the preceding year. These totals comprise the value of the fish as marketed in the various forms — fresh, canned, smoked, dried, etc.

Credit Union Annual Meeting

The annual meeting of the Murray Harbour Credit Union was held at the hall at Murray Harbour on the evening of October 18th. The President, Austin Bell presided and gave the report of the directors, which showed that a great deal of progress had been made since the beginning of 1940. The president mentioned with great praise the work of Harris Jordan who has been the manager of the Union until he, recently, moved to Montague. It has the opinion of all present that his moving away was a distinct loss to the Union. Rev. W. C. Plekett gave the manager's report which showed that the Credit Union has a membership of 49.

The business turn-over for the nine months was \$610. Shares paid by the members amounted to \$259. Loans totalling \$325 were made to 14 persons. John S. Livingstone reported for the Credit Committee, and Charles Richards for the Supervisory Committee. In the election to the different committees Leonard Biehart, Austin Bell, and Alex S. Buell was re-elected to the Directors, Milton White to the Supervisory Committee, and John Livingstone and H. L. Machon to the Credit Committee. The meeting adopted the recommendation of the Board of Directors that no dividend be paid this year. The rules and regulations were amended to include the Gloucester School District into the territory served by the Credit Union.

The business meeting was followed by an interesting discussion of study groups which are to be organized to further adult education in this vicinity. It was the opinion of all that all cooperative effort must be based on education for its success.

REPORTED

(Continued from page 1)

Laval. "A transition arrangement therefore was found," informed sources here, "which is the first armistice agreement which expires within a few days will replace another purely temporary arrangement similar to the one outlined."

These informants said, that final peace terms would depend on France's "loyal collaboration" in the new Axis-projected European order until the war's end.

Pétain, it was said, was persuaded to accept such an agreement as the lesser of two evils. The only alternative was reports to have been German and Italian occupation of what remains of unoccupied France.

Earlier, reliable quarters here reported that Pétain had objected to any close co-operation with the Axis and that his regime was to be replaced by one headed by Laval, favouring close co-operation in general, and by the French fleet in particular, with the Axis against Britain.

Official France was reported by these informants to be a house divided against itself over the question, with Laval supported by Naval Minister Jean Darlan and a majority of the navy command.

On the opposing side were said to be chief of state, Pétain, Gen. Maxime Weygand, former commander of the French army, Gen. Charles Huntzinger, one of the signers of the armistice and now commander of the army, and a majority of the cabinet.

Laval's main argument for striking the best possible bargain with the axis for co-operation with it in establishing its "new European order" was understood to be that if the Vichy government rejected the proposal, France might fall under German occupation.

If the axis considers French Mediterranean and African bases essential in the war, Hitler and Mussolini can take them by force, supporters of the vice premier told their colleagues according to reports from Vichy.

Might Form Paris Government

Laval is pressing his negotiations with German officials in Paris, where, it was reported here, he might set up a new government and ignore that of Marshal Pétain, represented as reluctant to remain as chief of state in any regime co-operating closely with Rome and Berlin.

Leaders of the projected Paris government would include Laval as chief of state, Admiral Darlan and six French leaders who have stayed away from Vichy in recent months and who have urged co-operation with Germany as the only way out for France.

They include Marcel Deat, former Air Minister who is writing now for the newspaper L'Oeuvre; former Premier Pierre-Etienne Flandin; Charles Spinaux, former Socialist minister; ex-deputy Ludovic Oskar Frossard, Jacques Doriot, a former Communist; and Adrien Marquet, mayor of Bordeaux and minister of the interior in the first post-armistice cabinet.

The Paris lines at Vichy, informed Frenchmen said, were sharply drawn following a turbulent cabinet session last night and Laval's meeting yesterday with Hitler somewhere in France, presumably Paris.

Weighing heavily against the formation of a government pledged to co-operation with the axis, it was reported, is the overwhelming op-

Declares Canada U.S. Need Joint Highway Plan

QUEBEC, Oct. 23—(CP)—Canada and the United States should get together on highway construction if they are to "jointly defend themselves against a common enemy," Capt. Arthur W. Brandy, Superintendent of Public Works, State of New York, suggested in an address here today.

For such defence, co-operation and co-ordination in highway construction for military preparedness are a necessity, not a theory," Capt. Brandy said at the second day of the Canadian Good Roads Convention, attended by 400-odd delegates.

Tonight, the delegates were entertained by a presentation of Canadian folklor, with dances and songs. The convention, 25th annual meeting of the association, will end tomorrow night with a dinner and an address by Hon. C. D. Howe, Dominion minister of Munitions and supply and transport.

The day's session was presided over by Premier A. S. MacMillan of Nova Scotia, who extended a welcome to United States delegates. Referring to the transfer of American rest-rooms to Britain, he said "it just makes us feel good all over."

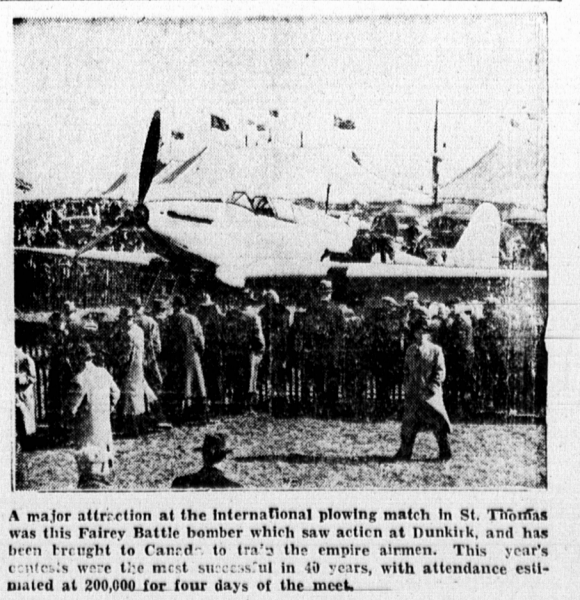

CLEANING AND STORING

(Experimental Farm News)

This period of usefulness of tobacco flue pipes may be more than doubled by thoroughly cleaning and storing them in a dry place at the end of the curing season. It is generally admitted that pipes last longer in kilns where wood is burned in place of coal for heating. Observations reveal that most of the rusting deterioration takes place while the kilns are not in use and that very little damage is done during the actual curing. When soot is left in the pipes in the presence of the moisture, rusting and corroding increase rapidly. Although this takes place whether wood or coal is used, it is more noticeable where coal is burned.

To reduce this loss, the pipes should be thoroughly cleaned as soon as possible after the curing season and piled on the lower tiers in the kiln until required for following season. This permits air circulation and keeps the metal dry during most of the year. By following this practice, ordinary gauging pipes in coal-heated kilns at the Dominion Experimental Sub-station, Delhi, Ontario, states F. A. Stinson, Officer in charge, are still fit for use after seven years of curing. Numerous reports indicate that when the pipes are left in position in the coal-heated kilns the year around, it is usually necessary to

make replacements after the third year. Since kiln pipes require cleaning once per year anyway, it is good business to do this as soon as possible after the completion of curing. Rusting of galvanized iron stacks cap at the bottom whenever not in use. It is a good idea to have a small amount of oil required to prolong their usefulness is well worth while.

OVERCOATS. OVERCOATS.

New stock arrived, the kind that fit. Cut and tailored by our up to date made to measure firm, selling at a right price. We believe in quick sales and small profits, also stock suits. Also the best fitting made to measure why? We learned the business and can measure and fit you right.
