JOHN F. WHEAR,
Post Office Inspector
Post Office Inspector's Office,
Charlottetown, Feb. 2nd, 1922.

LORD MOUNT STEPHEN

Lord Mount Stephen who was director, vice president and president of the St. Paul and Manitoba Railway, died recently at the age of ninety two. George Stephen, first baron Mount Stephen, was the son of William Stephen, a carpenter, of Dufftown, Banfshire, and was born on June 5, 1829. As a boy he herded the minister's cattle, then he went to Aberdeen to learn the drapery trade, and later went to London. In 1850 he came to Canada.

Meteors rarely become visibly luminous at an altitude of more than seventy five miles.

WOMAN SPORTING EDITOR

A French newspaper has a woman as sporting editor. She is Mlle. Bethe Bouvered, one of the founders of the Academa, the first sporting club for women organized in Paris.

SUMMERSIDE
AND TWO OTHER GOOD POINTS IN PRINCE EDWARD ISLAND

All applications will be treated in strictest confidence. Without exception, this is one of the best propositions ever offered to a live automobile dealer.

Address replies to Box 116, "Charlottetown Guardian."

After Ten Years

BY MARION RUBINCAM

AN ENGAGEMENT

Chapter 76

Paul went to his office in a state of fury. That day, still in his capacity of delivering bonds, he was given a particularly important set of papers to deliver to Mr. Midsey's office. They were to have Mr. Midsey's own receipt, so Paul saw his friend again.

"You look like a thundercloud," that gentleman remarked. "Your mother evidently doesn't care for your midevening excursions." Paul grinned and admitted she didn't.

"A girl?" hazarded Mr. Midsey.

Paul nodded.

"If your mother doesn't approve, well, I'm sorry."

"So am I. She'll raise the roof," Paul answered slangily.

"In that case," continued Mr. Midsey, handing him a signed receipt and dropping several hundred thousand dollars worth of bonds casually into a drawer, "In that case I suppose you'll have to provide a new roof."

"At $15 per week," Paul answered. And they both laughed and he left. He didn't care who knew now. Mr. Midsey's voice came to him as he went through the outer office.

"About that roof, you can always have a place here you know, at a little better than $15 per."

Paul thanked him and went on. He felt independent now, actually he had been offered a real position. What if his mother did object? He had friends and influence, and Patty was not used to riches, she would be happy.

On his way back to the office he telephoned her.

"I want to talk to you," he said. "I can't see you tonight, I have to stay home and be nice and pacify. You have an hour for luncheon. Come to the mentioned a restaurant half way down town) and meet me there as soon after one as you can."

To make sure of having her there he phoned his chauffeur to call for her and take her there. So with a whole quarter of their precious hour spent reaching each other, they finally sat opposite at a small table.

"I said I had a lot of things to think about," Paul began abruptly. "I suppose I should have told you that the only thing I really thought about was whether or not you loved me."

"You always knew I did," Patty answered, her eyes looking straight into his. I tried to hide it, but couldn't help but show it."

"Thank heaven for that," the boy answered. "I hate girls who beat around the bush and pretend and coquet. I love you best for your frankness and honesty."

"It wasn't nice to show how much I cared so soon," she faltered.

"Why not? Don't be like the rest of them now, now when I know how frank and honest you can be," Paul objected. "I always knew, that was why I liked you so much in the beginning." He spoke as though it was when the world began. "Then I began to like you for other things, courage and fineness."

He gave an impatient gesture at the waiter. But waiters are trained to attend young couples who are in love, to be invisable and out of the way while removing soup plates and substituting chops and souffle potatoes. The waiter retired.

"Anyway I fell in love with you. I'm more in love this morning than I was last night, and I expect to more in love tomorrow morning than I am this time." Patty's cheeks glowed. She glowed all over. Her eyes glowed with soft blue fire as she looked at him.

"I asked you last night if you loved me, and you said you did." He was leaning over the table, unmindful of the luncheon. "I always knew you did. I didn't know, I don't know now, whether you want to marry me. Do you?"

Did she? Wasn't every thought in the future somehow wrapped around a longed for, and unhoped of, possibility.

Her hand went out across the table, and she was reminded that after all she was at luncheon, she was not in the dim privacy of the car, shut off from the whirl of New York streets. Her hand went back, but Paul understood.

They both laughed a little. The waiter doubtless wished they would hurry a bit, the chops were good and he hated to see good food go to waste. How could he know that two people were changing their destiny at this special moment?

"You knew that too," Patty said simply.

"No I didn't," Paul told her, and her face showed him she was glad of that. "I never thought that far ahead. I just liked you, then loved you and now I adore you." They laughed again, and the waiter gave it up as a bad job and took away two practically untasted luncheons. He brought the dessert, they were still looking at each other across the table. He heard Paul say.

"I'm going to have it out with mother tonight."

That afternoon a messenger from Mr Midsey came into his office and gave him a slip of paper hastily stuck into an envelope. On it scrawled in pencil, "Better go easy and say nothing for a time." It had Mr. Midsey's signature.

Tomorrow—A Threat

Stormy Weather Hard On Baby

The stormy, blustery weather which we have during February and March is extremely hard on children. Conditions make it necessary that the mother to keep them in the house. They are often confined to overheated, badly ventilated rooms and catch colds which rack their whole system. To guard against this a box of Baby's Own Tablets should be kept in the house and an occasional dose given the baby to keep its stomach and bowels working regularly. This will not fail to break up colds and keep the health of the baby in good condition till the brighter days come along. The Tablets are sold by medicine dealers or by mail at 25 cents a box from The Dr. Williams' Medicine Co., Brockville, Ont.

Victors

Generation after generation of happy users have proved it to be the greatest of all family remedies for Coughs, Colds, Sore Throat, Grippe, Cramps, Colic, Chills, Strains, Cuts, Burns, Etc.

All dealers. 25 and 50 cents.

Great For Bad Coughs And Colds

Make Your Own Medicine and Have the Best There is

You'll Say It's Good When all Mucus Disappears and Clean Healthy Membrane is Your Reward

Here is an inexpensive home made remedy that you can't beat and one gm, stop ltahstdluetaoinshrdluhrdlu that will quickly bring up that phlegm, stop the snuffling, relieve the clogged oostrils, make breathing easy and cause stubborn colds and persistent coughs to vacate many times over night.

Try it right away if you suffer from Catarrh, Chest Colds or any irritating nose or throat troubles and you'll be glad, you ruq across this little Hint of advice.

Get from any druggist, one ounce of Parmint (double strength) add to it a little sugar and enough water to make one half pint. You can make it in two minutes and when it is mixed you can pride yourself on having a medicine that acts directly on the membrane of the nose and throat and acts so effectively that all phlegm, all tickling and inflammation speedily disappears.

TO THE POULTRYMAN:

A Weekly Letter Containing Practical Pointers in the Management and Care of Standard Bred Poultry, Taken From the Daily Log Book of Sunny Crest Poultry Farm, Bear River, P. E. I. by the Manager.

As the breeding season will soon be on I think a little information along these lines may be helpful to some who are planning to make the best possible mating out of the available old stock now on hand.

Too much importance cannot be attached to this part of the work for your whole chance of success or failure is dependent on the quality of stock which you hatch for it is not only on this stock that your egg yield for next winter is dependent but also to perpetuate your strain, if the chicks are weak, lacking vigor, undersized or have other faults which are either the result of mismating or of undesirable breeding stock, they will never make profitable layers or fit parents for future generations.

Every breeder you meet is quite sure that his system of breeding and mating is the best possible and there are very few who follow the same lines, so, to the person who is looking for the very best way to improve his or her stock along the same lines that some other person that attained a remakable success, consulting various persons is apt to be a pretty confusing business, however there are certain laws which are not man made, and which will be found to have just as system which you may decide to adopt and your system while not influence these laws to any great degree.

Selecting breeders by means of the trapnest is the surest and quickest method of improving a flock or strain but it requires a great deal more time and attention than the ordinary farm poultry man is able to give and besides it is expensive if proper records are to be kept and results charted for reference; for this reason I am inclined to think that trapnest breeding will never be generally popular.

However we now have a system which is widely used among all who are working along the lines of general flock improvement. This is known as Selective Flock Breeding, and with good judgment and close observation, good results can be had. Many large breeders use this system in preference to the more complicated and costly ones claiming that type can be more quickly fixed by selecting from visable signs and characteristics then by performance and ancestry. To make the best progress in selective breeding I think it is necessary to have a definite object in view, fix your ideal firmly in mind and work always toward that, it may be an egg type, meat type, or a fowl purpose type, it matters not which so long as it is the most desirable to you, and once you have made the decision, work always towards its attainment.

By Selective Flock Breeding is meant the selecting of the best individuals out of the general flock by means of visable or external characters such as abundnt health and vigor, good size and ample body capacity and mating them with males of known heavy laying ancestry if possible, in this way you have the type most desirable to you, on the female side and if you have a male which you know to come from a high producing strain, you have the producing blood on the male side, this makes an ideal combination and the surest foundation on which to build up a high producing strain. In selective breeding there is the important advantage that it results in certain improvements of quality and not merely in the elevation of the flock to a higher standard by the elimination of the lower or average members. It increases the production of individuals thereby making higher individual records possible and also stimulates the average production by raising the average of the whole flock, by weeding out the poor producers, and putting the heavier layers in their place.

To be uniformly successful in selective breeding, selection must be practiced from the time the chick is hatched and continued right through the growing period and until the final choice for the very littest individuals is made in the breeding pens. Fowls which at any time show a lack of constitutional health and vigor will never prove profitable for any purpose they have not the stamnia to stand up under the strain of long periods of heavy laying, they have not the digestive capacity to profitably turn large quantities of food into meat when fattened for market, and, most important of all they never have the energy or vitality to transmit to their offspring which is the lawful heritage of every hatch to live chick.

It is a matter of continuous wonder to us how some will do all in their power to carry on the little weaklings, they will start by carefully cracking the egg to assist the chick to hatch simply because he had not the strength to pass the very first portal, which I believe is the ganging test of the fit. When he has been literally dragged into the world with failure written in every line of his little drooping wings and squatty low set body, he is petted and coddled in a flannel lined basket under the kitchen stove and always trying to tell the attendant by his plaintive cheep that he was not intended to survive with the fit and the strong. If the unnatural method triumphs over the given law of "only the fit survive" and he is finally assigned to the laying or breeding pen, that chick will be the last one off the roost in the morning and the first on at night, a catcher of every chance disease that happens to get into the flock, a millstone around the neck of the profit earners, and often, if careless methods of breeding are used, the direct cause of over one half of the flock being non producers, simply because the chick was born "tired" and nature was not allowed to give the breeder a fair start in the matter of selection.

I have heard some claim that laying is a natural function that every strong healthy hen should be capable of, and that if the hen cannot lay good hatchable eggs she is a cull and therefore all our laws of breeding are nullified by results. They apparently forget or overlook the fact that we are expecting and getting a great deal more from the present day domestic fowl than nature demanded of her wild ancestors who laid from twelve to eighteen eggs in a season, from which she hatched her one brood of chicks and had the rest of the year to forage the food necessary for body maintenance alone.

We have, therefore made vast improvements along the lines of increased egg production, but in many ways we have departed from nature's ways to accomplish this and if the percentage of weaklings is greater, it is evident that greater care must be taken in the selection of those fit, not only to carry on the breed, but also to show with each generation an improvement.

With every increase in production there must be a proportionate increase in the strength of the bird to enable her to assimilate the increased amount of food required for this increased production.

Your flock of tomorrow will be a greater or lesser reflection of your breeders of today, therefore pick those that are strong and fit, and that have the qualities that you want manifest in your future flock, make improvement your watchword always, therein lies the road to success.

Doubtful Blessing

Cardinal Manning was a cadaverous man, and never looked robust. One day he visited a certain convent in Liverpool. The cook at the convent, an Irishwoman, was presented to the cardinal. She received his blessing in silence, and then glancing at his emaciated form, said: "May the Lord preserve your eminence, and may God forgive your cook!"

CASCARETS 10¢

For Constipated Bowels, Sick Headache, Sour Stomach, Bilious Liver

The nicest cathartic-laxative in the world to physic your liver and bowels when you have Dizzy Headache, Colds, Biliousness, Indigestion or Upset, Acid Stomach is candy-like "Cascarets". One or two tonight will empty your bowels completely by morning and you will feel splendid. "They work while you sleep." Cascarets never stir you up or gripe like Salts, Pills, Calomel, or Oil and they cost only ten cents a box. Children love Cascarets too.
