Secretary: Lieut. Col. D. A. MacInnes, D.S.O.
Editor and Manager: Director: J. R. Burnett, F.J.I.

MONDAY, DECEMBER 17 1945

Parliamentary Wage Boost

The bold, barefaced, indemnity boost by our Federal legislators is universally condemned. It is simply a case of, while in control of the cash register, putting their hands in and stealing the cash.

The virtues originally inherent in the increase in the stipend of members of the House of Commons have been largely obscured in the public mind by the tactics and timing of the Government in pushing the plan now, regardless of public reaction.

It has been a hectic time recently, and it will be more so before Santa has been ultimately traced to his source of supplies.

The time has not yet come when we can be complacent about tuberculosis. This disease is still the greatest killer of people between ages of 15 and 45.

Sir Humphrey Davy, English chemist, who proved that diamond is pure carbon, and invented the miner's safety lamp, born this date 1779; he was a distinguished agricultural chemist, investigated the alkalis and alkaline earths, and isolated potassium and sodium, also boron and other elements.

Another trade restriction. The Commons gave third reading to an act respecting the manufacturing, inspection and sale of maple products. The bill, previously passed by the Senate, requires sugar producers to obtain licences if they export sugar or maple syrup from one province to another.

Mr. Bevin is definitely losing support in Left Wing circles in Britain. He is a man of rigid honesty of purpose, and a true patriot. To him Britain is a power for good in the world.

Justice Minister St. Laurent said in the Commons that his department knew nothing about the reported use of a lie detector in Windsor, Ont., to test the culpability of a convict. He was replying to John Diefenbaker (P.C., Lake Centre) and said that any information about the use of the detector would have to come from the attorney-general of Ontario.

The Senate sent back to the Commons the most amended piece of Commons' legislation of the session, a bill to merge the Departments of Reconstruction and Munitions and Supply into a single department of Reconstruction and Supply. Third reading was given after Senator Wishart Robertson, government leader, said Reconstruction Minister Howe had informed him that the amendments would not handicap his department in the renegotiation of war contracts.

Canadian tourist attractions are being widely advertised in the United States and South America. Trade Minister MacKinnon said in the Commons. The Canadian Travel Bureau also was undertaking a campaign to make individual Canadians conscious of the value of tourist trade.

Canadian farm machinery helped Britain to win the battle of the land. Supplied through Canada's material aid program, it enabled British farmers to plough up 6,500,000 new acres of arable land, much of which had not been cultivated since Saxon times.

The Quarterly Bulletin of Agricultural Statistics issued by the Dominion Bureau of Statistics said cash income from the sale of farm products in Canada for the first six months of 1945 was \$702,000,000 compared with approximately \$764,000,000 in the same period last year.

The story is told in an official British Government booklet, "Land at War." It records how British farming, which before the war was decades behind Canada in mechanization, became, under pressure of Britain's near-desperate food plight, one of the most highly mechanized agricultural systems in the world.

Canadian farm machines arriving in England were, according to the book, "Dazzling to the eyes in their multi-colored paint... for there is nothing so gay and gaudy as a piece of new farm equipment straight from the factory, when the farmer they were the means to accomplish the hitherto impossible."

Notes By The Way

Nova Scotia is expecting to export a million Christmas trees to the United States in the next few weeks. The Nova Scotian farmers lost on the poor apple crop, they hope to make up on the Christmas trees, no doubt. —Ottawa Citizen.

It is too much to expect that Windsor will long enjoy the condition now applying with not one patient in the Isolation Hospital. The fact that this can be achieved temporarily, however, is encouraging. It stresses the value of the public health service that is being carried on. —Windsor Star.

The Minister of Defence has stated that no more guns will be appropriated to communities for spit skulls, a shower of pop bottles and paper and a referee fleeing the wrath of the mob; lacrosse without a few stretchers came in new stretchers, cases, and objects to display to our friends in Europe. Even things like cricket phernalia, for cricket would be pretty awful without awnings and cake, although to many people cricket is pretty awful even with awnings and tea and cake. —Hamilton Spectator.

Now is the time to have anti-freeze put in the radiator of the family automobile. The cold weather is upon us and there may yet be a day or two of Indian summer warmth, but the temperatures will continue to decline. The damage that a freezing circulating system can cause is considerable, mechanics are still over-worked, and the new automobiles are still a little way off the car that took us through the war is going to have to last a little longer, and it deserves care. —Boston Post.

I hadn't heard this French resistance story before. Apparently the bird had taught her parrot to say "Mort aux Boches." Suddenly she had a member of the Gestapo billeted on her roof. The lady that next time he heard it he would kill the parrot. Very worried, she asked the Gestapo to help her get rid of the parrot. The bird brought up parrot which he would exchange for hers. They swapped. That night when the Gestapo man came in the parrot said nothing. At last, losing his temper, he shouted "Mort aux Boches." The parrot said, "May the good Lord answer our prayers, my son." —London News Statesman.

Maybe our schools aren't all they are cracked up to be. At any rate, girls and boys returned to Britain are said to be having a hard time passing oceanic subjects. There, and many public schools have accepted the boys although the results of the entrance examinations were not so good. Some of the boys were kept in the school for a year. We can still learn a lot from British education. —Brockville Recorder and Times.

When horses founder, they manifest sudden stiffness, lameness, and a tendency to pluck their forefeet out in front, so that they rest on their heels, with the hind feet placed somewhat forward under the body. This condition is due to blood congestion in the feet, say veterinary authorities, and requires prompt treatment if permanent damage is to be prevented. First aid measures recommended are: standing the horse in running water or pouring water over the feet or applying finely-crushed ice packs to the feet. A veterinarian should take charge of the case as soon as possible, because the speed with which remedial measures can be applied largely affects the extent of recovery. —From Government Bulletin.

Lt. Gen. Jimmy Doolittle completed a trans-continental non-stop flight in a Superfortress Sunday at the disappointing slow average speed of only 393 miles per hour. This was considerably short of the record of 383 m.p.h. We can't help wondering what was holding him back. We recall the time when the old master would step into an orange crate, held together with chicken wire and covered with an old awning, and go around the world in 19 days. He was 60 years old when he was young. His later exploits have been such a great relief to leading that flight of Liberators to give Tokyo its first bombing. Nothing spectacular, y'understand. And now to do no better than cross the country at a pedestrian six hours and 56 minutes. It's old age creeping up on Jimmy, that's what it is. —Detroit Free Press.

PUBLIC FORUM

This column is open for the discussion by correspondence of questions of interest. The Charlottetown Telephone Company has recently endorsed the opinion of correspondents.

NORTH WILTSHIRE RURAL TELEPHONE COMPANY

Sir, I am a shareholder in this Company. One share ten dollars cash and the other ten dollars by work at the time of construction. By those two shares I am a full dividend shareholder in this Company. I am informed that this Company's affairs were put in the Utilities Board by some person or persons of whom I have no knowledge. I can speak from authority, I had no knowledge of those proceedings.

The reports are that the decision of the Utilities Board, of whom I am informed Dr. Yeo is the chairman, is that North Wiltshire Reports are to be taxed two hundred and forty dollars a year. North Wiltshire one hundred and twenty dollars and the P. E. Telephone Company the same amount they have been paying Central of one hundred and twenty dollars per year. If the share statements are correct as to the salary to be paid to Milton Central, this no doubt will be a precedent to other telephones in the province. I am a shareholder in the same amount they have been paying Central of one hundred and twenty dollars per year. If the share statements are correct as to the salary to be paid to Milton Central, this no doubt will be a precedent to other telephones in the province. I am a shareholder in the same amount they have been paying Central of one hundred and twenty dollars per year. If the share statements are correct as to the salary to be paid to Milton Central, this no doubt will be a precedent to other telephones in the province.
