SEEDED RAISINS

FOR XMAS BAKING
Seeded raisins will be used more than ever this year on account of the very high price of Currants. We have received over 2,000 lbs. of Griffin & Skelly's Eagle Brand which is by far the best California Seeded Raisin on the market. The seeds have all been taken out of the raisins by a machine, leaving the pulp ready for use, and thus leaving you a lot of time and trouble in preparing for your Xmas baking.

TORONTO, Dec. 9.—A large number of the political friends of the Hon. A. S. Hardy ex-Premier of Ontario, gathered at his residence St. Albans street, yesterday afternoon. The occasion was the pre-

HON. A. S. HARDY.

sentation to Mr. Hardy of a testimonial for his faithful public service to party and country.

When Mr. Hardy resigned the premiership his friends thought there should be some fitting testimony to Mr. Hardy's services, and started the work of getting it together.

Yesterday the Hon. Mr. Hardy and his wife were called upon by friends and admirers and presented with a cheque for \$20,000, a silver tea service and a case in silver cutlery. The presentation was made by Senator G. A. Cox.

An oak chest, containing 100 pieces of silver and cutlery, each with the Hardy crest upon it.

WITHOUT SLEEP.

The vitality of the blood is soon exhausted. Sleeplessness is one of the symptoms of starved nerves. It is a warning of the approach of nervous prostration or paralysis. Don't be tempted to use narcotics or opiates. Dr. Chase's Nerve Food will gradually build up and reconstruct the wasted nerve cells and positively cure all nervous diseases. It is nature's greatest restorative, recommended by your druggists.

New Safety Anchor.

The difficulty of keeping a lightship on her station in stormy weather and the danger to navigation when she is shifted are recognized by all seafaring men. Buoys, also, often drift away from their stations and so deceive the mariner. Such accidents are due usually to the parting of a light vessel or buoy, in the heavy sea or to the lifting of their anchors on the bottom as they ride, moving the vessel or buoy little by little far from its original location. To prevent such accidents, a safety anchorage has been invented by George C. Stanley, of Portsmouth, Va.

It consists of a cable counterweight, buoy and anchor. In its operation, as wind or wave move the vessel from the charted position, the cable and counterweight are lifted; the cable and counterweight is then suspended from the vessel to the buoy. As the strain increases the buoy is submerged and forms an elastic loop of the cable with a continuous strain throughout the movement. This allows the vessel to gradually recede with the wave, and as the tension is increased on the cable the vessel comes through the wave in an easy manner and presses forward to buffet the next wave without any sudden stress being placed upon its fastenings. The forces called into play by this anchorage are opposed to one another—the buoyancy of the float and the gravity of cable and counterweight. The present method of anchorage requires a very heavy cable with many fathoms paid out to relieve it from sudden shock produced by each succeeding wave.
