THURSDAY, DECEMBER 3, 1925

POET'S VISIT.

Charlottetown is indeed fortunate in having had a visit from one of Canada's most distinguished poets, Dr. Charles G. D. Roberts.

WEATHER PREDICTIONS

It is difficult, indeed as impossible, to predict the weather of a few months hence as it is to foretell the kind of government we are to have after the 7th of January.

ence in connection with weather predictions is that, during unusually severe or unusually mild weather at the beginning of winter, the weather prophets predict an unusually severe or unusually mild winter to follow.

A PROMISING ERA

We are now being deluged with promises as to what the Liberal Government is going to do for Canada—if it survives the coming session.

EDITORIAL NOTES

Governor's Island is now called "the Isle of Joy." "Great weather, ain't it," says the cheerful one.

Notes By The Way

Parliament was announced to meet on December 10. It was a little later proclaimed from Ottawa that Premier King was very desirous that the session should begin on that date, and later still it was stated that it was almost certain that the fixed date which had been approved by the Governor General would be kept to the letter.

So much depends upon what attitude the Progressives may take in the new Parliament that the subjoined extracts from Western newspapers may be of interest.

The Grain Growers' Guide

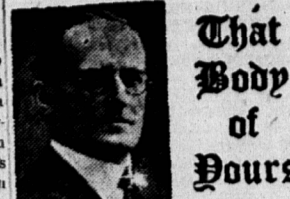

which speaks for the Western Progressives, makes the suggestion that they "would not find it difficult to support a low-tariff Liberal leader if Mr. King could be laid on a convenient shelf without undue delay."

That is what The Guardian has been telling its readers for years past.

Lapointe from Quebec, or Dunning from Saskatchewan are indicated as foremost because Quebec and Saskatchewan are the two Liberal Provinces.

Your Birthday

DECEMBER 3—You are impatient and too hasty in your judgment, and plan many things which you tire of before they are completed.

By James W. Barton, M.D.

WHY GET OFF THE FEET?

Although I dislike the idea of anyone nursing himself too much and giving in to every little ailment, still there is one point to be remembered that unless you get some idea of the trouble, getting off your feet has two important advantages.

Island Cattle Win Distinction

In the greatest livestock show in the world and against the keenest possible competition wherein the efforts of breeders from every Province in Canada and many States in the United States, with the production of their skill in breeding and fitting, and every artifice of the expert showman, to reach to prominent places in the money, is outstanding distinction.

Walking The Ocean Floors

Condensed from The World's Work (June 5) James C. Young.

The widest and most interesting empire on the globe remains unexplored: it is the ocean floor. For years the imagination of man has dwelt fantastically upon the secrets of the ocean floors, and now that science is beginning to penetrate those vast, water-locked mysteries it is proved that for once the dreams of man have fallen short of the mark.

The Study of Submarine Life

has much to gain from underwater illumination. The American Museum of Natural History in New York is now fitting up its new Hall of Ocean Life, which will be the principal display of the kind in this country.

Chimneys Most Frequent Cause Of Dwelling Fires

A recent Bulletin of the National Fire Protection Association, entitled, "Make Your Chimneys Safe", contains the following valuable and astounding information regarding chimneys:

"Defective chimneys and flues are responsible for more home fires than any other cause. In the past decade they have caused a loss estimated at \$180,500,000. Unnumbered lives, mostly women and children, have been lost in fires, due to this most unnecessary cause.

"So easily prevented by common sense in constructing chimneys and keeping them clean, it is amazing that we should continue to build them in a fashion that engenders tragedies and losses.

"Everybody ought to learn, remember and enforce the main factors contributing to safe flue construction, which are designed to make the smoke, flame, heat and gases of combustion go into the air through the top of the chimneys rather than through the building through its sides.

"Chimney fires are due to accumulations of soot, caused by imperfect combustion of fuel and neglect to clean the chimney. A continually and freely smoking chimney is a sure sign of imperfect combustion. Intelligent firing and proper design of the heating equipment will largely eliminate this. Chimneys should be cleaned at least once a year, and oftener, if necessary.

"If the exposed outside surface of a chimney is at any time too hot to rest the hand against without discomfort, it is indication that any wood work in contact with it is in an unsafe condition.

"A smoke test is a simple method of detecting the presence of cracks or other openings in flues. The method is to build a snuffing fire in the furnace or boiler connected with the bottom of the flue and when the smoke is flowing freely, close it tightly at the top.

The escape of smoke through the chimney walls or into other flues indicates the fact that it should be corrected.

BE CAREFUL—The fire hazards of Winter are commencing. Guard your fire dangers and for your insurance needs apply to

SURE GUIDANCE—In all thy ways acknowledge him, and he shall direct thy paths. Proverbs 3:6.

PRAYER:—Lord, we know not what a day may bring forth, but we believe in Thee and commit our way to Thee, assured that Thou knowest all the way, and will guide us.

THE CONSOLATION OF THE FUTURE You're bound to come to laughter if you'll trudge your way along. Some day your heart will lighten to the music of a song.

Keep walking toward the hill top, Though just now the road seems steep. For every heart must suffer grief and every eye must weep.

What though to-day be dreary And the mist is in your eyes Somewhere along the future Shall the sun in splendor rise.

Another suggestion arising from this development of undersea photography is the possibility of lowering a specially constructed camera, almost to any depth, surrounded by a battery of electric lights, thus taking photographs by the hour of whatever passes before the lens.
