Christmas Trees In New York

NEW YORK, Dec. 19.—There's a forest of something like 1,000,000 trees in New York today—balsam fir and spruce. They've been brought here for Christmas, many of them from Canada, and the tree markets are humming with activity.

In Memoriam

MRS. DONALD MORRISON

On the morning of Dec. 1st the soul of Mrs. Donald Morrison freed of its earthly bonds sped to its eternal reward.

The deceased had been ill but a few days when her body with its disadvantage of a great age gave up the spirit which had enlivened it for a space of ninety years.

For some years past she was forced by failing eyesight to refrain from work of any kind, yet with calm resignation she accepted this affliction and spent her time not idly but in preparing well for the life, not of this world, but a life that taught by faith and meditation she well knew was infinitely superior to anything here below.

She leaves to mourn her passing two brothers, Alexander and Malcolm MacAskill, three sons, Rev. Vincent Morrison, Chuchow, China, Vincent of Orono, Me., Stephen at home, and one daughter, Mary who tenderly nursed her to the last.

Three step-sons, Rt. Rev. James Morrison, Bishop of Antigonish, N. S., Allan of Savage Harbor and John of Johnstown, N. Y.

Padre Found For Tristan Da Cunha

LONDON, Dec. 18.—The lonely island of Tristan Da Cunha is once more to have a priest.

The Society for the Propagation of the Gospel announces that a successor to Rev. A. G. Partridge, who returned from the island last January, has at last been found in the person of Rev. Harold Wilde, who will sail for his mid-Atlantic parish at the end of January.

Mr. Wilde was educated at Durham University, and was ordained in 1920. For a time he was chaplain of St. Saviour's, Suez, and has had parish experience at Upper Clapton, Dingwall, and Alderney.

The Society for the Propagation of the Gospel advertised during the summer for volunteers, but although several candidates presented themselves, Mr. Wilde is the first to answer all requirements.

The padre of Tristan Da Cunha must be ready to face isolation and privation, must be of mature age and experience, and must be able to fill the place not only of priest, adviser and friend to the 160 islanders, but of doctor, dentist and magistrate as well.

First Little Girl—What's your last name, Ella?  
Second Little Girl—I don't know you, I'm not married.

Mr. Pester—You'll only jump out of the frying pan into the fire.  
Mrs. Pester—We don't use such things as frying pans and fire. I suppose you mean one of the electric grill into a short circuit.

A Christmas present is often the result of a summer past.

Soya Bean As Fertilizer

A regulation under the Dominion Fertilizer Act has been established which requires a minimum of 6 percent of available nitrogen and 8 percent of available phosphorus in the meal sold for fertilizer purposes.

This guarantee to buyers that the meal has been properly processed, and indicates that it should give efficient results when used as a nitrogen fertilizer.

Soya bean meal has for many years been used as a nitrogen fertilizer in eastern countries, particularly Japan and China. While it has been officially recognized only recently as a fertilizer in Canada, Chinese gardeners in British Columbia have, during the last few years, used as fertilizer hundreds of tons of soya bean meal imported from eastern sources, principally Manchuria.

In recent years soya bean production in Ontario has made considerable progress and two factories have been established, one at Milton and one at Chatham, for the manufacture of the meal. As a result there is now a supply of domestic soya bean meal in Ontario which is even higher in quality than Asiatic meal for feeding and fertilizer purposes.

A Christmas present is often the result of a summer past.

POLICE COURT—The defendant in a prohibition case appearing before the St. Andrew's Magistrate yesterday morning was convicted and the case adjourned one week for sentence.

AGRICULTURAL SHORT COURSE—announced several weeks ago in The Guardian, the Provincial Advisory Committee on Agricultural Services have decided on a six weeks' Agricultural Short Course in Prince of Wales College this winter, starting Jan. 16, with additions in the way of addresses by Professors Croteau and L. W. Shaw, and a bonus offer of \$6.00 and free transportation to students attending regularly and showing satisfactory results.

FALCONWOOD WORK ADVANCED—Plastering and lathing work on the east wing of Falconwood Hospital, upon which Mr. J. J. Campbell and his workmen have been engaged for the past six weeks, is now practically completed but for the finishing touches. Plumbing and other work is also well advanced the building is expected to be ready for occupancy by the middle of February.

DeValera Will Not Bow to U.K. TRALEE, Irish Free State, Dec. 20.—Speaking under a banner labeled "Unite and Conquer," President Eamon De Valera declared today that the Irish Free State would not "bow" to the United Kingdom.

De Valera charged the opposition group the United Ireland Party, had aims of establishing a dictatorship.

"At this moment," he said, "our nation is being pressed by one of the biggest nations in the world through economic means to make us yield to their unjust demands."

Many persons came on excursion trains to the open air meeting.

"We are not going to yield but will maintain ourselves against that pressure," De Valera asserted. "We must organize and for that, peace is necessary. We want peace and order. Those opposed to these things are trying to make a hero out of anyone who disturbs that order."

He asked if Ireland wanted an "ordered democracy or anarchy followed inevitably by one section imposing its will over another."

Indication Of Christmas

HALIFAX, Dec. 20.—Christmas is drawing near, and the Nova Scotia Liquor Commission has recognized the festive season by recognizing special reductions in certain lines of liquors.

At its Halifax annual order branch, several varieties were selling all last week for just about half the regular price. The demand was so great that all hard liquor available at the lowered price were sold out quickly.

The evening was pleasantly spent in music after which the ladies of Hamilton served ice cream and cake.

The pictures showed first that a good strong bone is structurally like a mass of toothpicks carefully laid parallel, bound together in orderly fashion. The bone structures resembling toothpicks are the micelles, extremely small fibrous tissues, made largely of calcium.

Rickets scrambles these bone toothpicks, turning them topsy-turvy, as if spilled out of a box. After the disease is over the disordered array of bone cells freezes together in whatever pattern that cells happen to have. They do not return to their regular orderliness.

This even orientation of the bone micelles confirms previous theories long held that such a structure probably accounted for bone strength.

These studies were made by Dr. George L. Clark and J. N. Mrgudich of the Illinois University Department. They said the pictures show rickets breaks down the "organic cement" which holds the bone micelles together.

"The best thing to do about rickets," says the report, "is to prevent it. The disease leaves an indelible effect. Where it attacks a person a second time, the damage is much more severe, more devastating."

During three of the past seven years in which a detailed study of the flight and associated activities of the European corn borer was carried out by the Dominion Entomological Laboratory at Chatham, Ont., several thousands of tracks of various kinds were collected on certain nights in a special light-trap. This trap, which consisted of a 100-watt white frosted electric bulb set over a funnel-shaped receptacle, was operated in a farmyard about a mile distant from the laboratory's corn plots. The trap was constructed to keep rain out of the receiving box where the insects were killed by the use of calcium cyanide dust.

"Some fellow stole Mabel's hand-bag last night and she had all her make-up in it."

"Oh, dear," he didn't even spare her blushes.

Chicago Menaced By Crime Ring

CHICAGO, Dec. 19.—The menace of a new and powerful crime ring hung over the midwestern today, police said, as they sought the perpetrators of two major crimes in Chicago.

One was the brutal slaying of a police officer by a desperado he approached to question, and the other

was the daring daylight looting with sledge hammers of almost 100 safety deposit boxes in a closed bank.

In both the name of one man—John Hamilton—stood out as the connecting link between heretofore unrelated gangs, the Touhy and the Dillinger.

Police said Hamilton had been identified from photographs by witnesses and others as the man who shot down Detective Sergeant William Shanley Thursday afternoon in a northside garage.

At the same time Joseph Kinch, custodian of the safety deposit vault of the Unity Trust and Saving Bank, identified Hamilton's picture as one of the seven desperados who spent most of the afternoon of the day before pilfering the contents of boxes.

Meanwhile police squads searched for an explosives driver who disappeared with \$39,000 in cash and a pistol which they feared he would not hesitate to use, if cornered.

The hunted man was Albert R. Hammel, an employee of the Brinks Express Company, who walked away from an armored truck when it stopped late yesterday at a loop bank.

Presupposes Exploding Star

Swicky's calculation is based on a super-nova, or exploding star, starting with a mass and size equal to the sun, that is some 800,000 miles in diameter. When the explosion is all over nothing remains but neutrons collapsed upon themselves.

The object still has 9-10th of its original mass about 1-10th being lost in radiation. But the object now is only about 18 feet or less in diameter.

Look in the Back for the Famous Full-Spray, Seal-Shielded, 7-Point Fully Guaranteed Tubes

The 7-Point Superiority of Seal-Shielding AT NO EXTRA COST

1. Affords the only perfect shield.

2. Eliminates vibration caused by loose cans around the tubes.

3. Permits increased power.

4. Absorbs and carries off "charges" and excess heat which cause distortion and damage.

5. Preserves uniform temperature and prevents "hot-spotting."

6. Insures perfect tonal fidelity.

7. Greatly prolongs the life of the tube—which is one of the reasons why every Rogers Seal-Shielded Tube is fully guaranteed.

Seal-Shielding is exclusive to Rogers and Majestic

MODERN as tomorrow! See this beautiful new Majestic two-door Console—a veritable triumph of fine woods and superb design, in which matched but walnut doors, figured walnut panel, marquetry inlays and ebonized top and base form subtle harmonies and contrasts that will strike a note in your home at once unique and artistic. And performance! Every worthwhile feature of the past three years plus the new Full-Spray, Seal-Shielded Tubes—the exclusive Rogers-Majestic development which sets up new standards of tone fidelity—new freedom from vibration and distortion. Look at the seven points of superiority listed to right.

You've never before had such Majestic value offered at such a low price. You will probably never have such an opportunity again. See it! Hear it!

PRODUCE

(Canadian Press) MONTEAL, Dec. 20.—Steady prices prevailed on the Montreal dairy and produce market today, with no change being recorded. The egg market was quiet at 36 cents a dozen for A-1 and 35 cents for A-2. Arrivals amounted to 100 cases.

No 1 registered butter was generally quoted at 23 1/2 to 23 3/4 cents a pound for cartons or less, with a few dealers asking 24 cents for small lots, a total of 807 cases was offered for sale.

Ontario cheese remained at 10 cents a pound for cartons or less. Offerings totaled 27 boxes.

The potato market continued at 70 cents per 80 pound bag of Quebec, 50 cents per 80 pound bag of New Brunswick green mountains, and 50 cents per 80 pound bag of Prince Edward Island green mountains.

Weight Inconceivable

This means that they weigh something on the order of 40,000,000,000 tons per cubic inch. Hence a speck of one of them about the size of a grain of sand would weigh more than a ton.

Observatory here says that objects of high density—that is great weight—have been found in the skies, but the composition of Sirius, for instance, is figured to be dense enough to weigh about a ton to the cubic inch.

Some other white dwarf stars have been calculated to be perhaps 50 per cent more dense.

Presupposes Exploding Star

Swicky's calculation is based on a super-nova, or exploding star, starting with a mass and size equal to the sun, that is some 800,000 miles in diameter. When the explosion is all over nothing remains but neutrons collapsed upon themselves.

The object still has 9-10th of its original mass about 1-10th being lost in radiation. But the object now is only about 18 feet or less in diameter.
