CROP REPORT

Below will be found a brief synopsis of telegraphic reports received at the Head Office of the Bank of Montreal from its Branches. The Branch Managers have complete and intimate knowledge of each local situation and are in close touch with crop conditions in all sections of the districts mentioned.

GENERAL

Crops are extremely spotty in the Prairie Provinces and rust has done extensive damage in Manitoba and parts of Saskatchewan. During the past week heavy rains have delayed harvesting operations and caused further lodging, while recent frosts in Alberta and northern Saskatchewan will reduce yield and lower grade in Quebec crop conditions generally are very satisfactory. In Ontario grain harvesting is practically completed and threshing well advanced, but yields fall below earlier expectations. In the Maritime Provinces hot dry weather over a four to five week period has adversely affected grain and root crops. In British Columbia unusually cool, wet weather in the

interior has delayed harvesting, but, generally speaking, crops there are progressing satisfactorily. Details follow:

PRAIRIE PROVINCES

ALBERTA—Cold weather and rain during the past week have been unfavorable to crops generally and present indications are that cutting will not be general for another ten days. Considerable frost damage has occurred in all areas except the south and yields and grades will probably be lowered. Beet crops are satisfactory and average yields are indicated. **SASKATCHEWAN**—Harvesting is becoming general. Indications are that wheat yields will be very uneven and grades low. The wheat crop has suffered further deterioration from rust in the southern, eastern and central areas, while in the north some damage from frost has occurred. Coarse grains are fair to good. **MANITOBA**—Cutting is well advanced and threshing has commenced. Hard wheat crops are almost a total failure in many districts and the yield and quality generally will be poor. Durum wheat and coarse grains have also suffered damage from rust and lodging, and yields will vary greatly.

PROVINCE OF QUEBEC

In the lower St. Lawrence and Lake St. John districts grains and roots continue to give promise of satisfactory yields and pasturage is good. In the Eastern Townships and Ottawa valley the grain harvest has commenced in some sections. Slight rust damage to oats is reported from a few points but generally prospects are satisfactory for good grain and root crop yields, with apples continuing below average and tobacco showing some improvement. Pasturage is plentiful.

PROVINCE OF ONTARIO

Grain yields have not realized earlier expectations, fall wheat varying from 15 to 30 bushels per acre, oats 40 to 60 and barley 35 to 50. Samples, generally, are below average, due to lodging and rust. Storage of a large ha. crop has taxed barn room to capacity. Corn and roots are making good progress and promise well. Canning tomatoes continue to develop satisfactorily. Peaches, plums and pears are plentiful and early varieties are now being marketed. Approximately 1,500,000 pounds of tobacco in Norfolk County have been destroyed

by wind and hail, but the crop on the whole is well above average.

MARITIME PROVINCES

In Prince Edward Island harvesting of an average grain crop, which is ripening fast due to hot dry weather, will soon commence. Roots and pasturage require moisture. In New Brunswick and Nova Scotia harvesting of grains, which have matured too rapidly under excessively hot weather, has begun in some sections. An average yield is expected. Roots and pastures are in need of rain. The apple crop promises well.

PROVINCE OF BRITISH COLUMBIA

Weather conditions have delayed harvesting in the interior but harvesting is under way on Vancouver Island and the lower mainland, where growing conditions have been more favorable. Apples are now at their peak, but the yield is only 57 per cent of average. Free fruits are sizing well and coloring satisfactorily, and the following yields are now indicated: apples and pears, 90 per cent of average; peaches 35 per cent; plums and prunes 80 per cent. Pasturage in the mainland is good and water for irrigation is plentiful.

BUSINESS CONDITIONS IMPROVE

Trade Increase With Great Britain Cited By High Commissioner.

(C.P. by Guardian's Special Wire) MONTREAL, Aug. 26.—Evidence of continued upward movement in Canadian business despite midsummer conditions are given in the monthly business summary of the Bank of Montreal, just released. Building construction was higher in June than a year ago and higher again in July, the report says. The external trade of the Dominion, despite a slight recession in June, was higher in July than a year ago and for the first six months of the year was four per cent above the 1934 half-year record. Gold production in the Dominion is reaching new high levels and expansion is being shown in several important lines of the manufacturing industry. The automobile output for the first six months is well above that of the 1934 period. An increase in trade with the British Empire is also noted, with corresponding advantage to Canadian produce. The tourist trade, "which has become so important a factor in the general international balance, give evidence of materially increased volume during the present season," according to the bank summary. The gain is well distributed among the provinces.

BELMONT WOMEN'S INSTITUTE

The Belmont Women's Institute met at the home of Mrs. Seymour Thompson on August 16th for their regular monthly meeting, with eleven members and 25 visitors present. The meeting opened by singing the Institute Ode followed by Creed in unison. The roll call was answered by "Riddles." The minutes of the last meeting were read, approved and signed by the President. The reports of the different committees were favorably received and new ones appointed, namely: Sick—Mrs. A. S. Johnson and Miss Gertrude Simpson; Program—Mrs. Major Barrett and Mrs. Ernest Inman; Sandwich—Mrs. Seymour Thompson and Mrs. Robt. McLaren; School—Mrs. E. W. Birch and Mrs. J. A. Simpson. It was moved by Mrs. Jas. Higgins, seconded by Mrs. J. A. Simpson that Mrs. Albert B-swell be invited to our September meeting to give a demonstration on Knitted Cushions. Next meeting to be held at the home of Mrs. J. A. Simpson, roll call to be answered with "An Island Manufacture." Business part of meeting closed by singing National Anthem. Collection amounted to \$1.35. A very interesting demonstration on Reed Work was given by Mrs. E. D. Simpson, and each member made a "Tea Pot Stand." A dainty lunch was served by the hostess assisted by some of the members.

Halifax Port Arrivals

ARRIVALS:—
Sherman B. from Local Harbour.
Magnhild from Newfoundland.
G. S. Mayes from Local Harbour.
Lutzen from Bonaventure.
Mary Currie from Local Harbour.

SAILINGS:—
G. S. Mayes to Local Harbour.

VESSELS IN BERTH:—

Mary Currie, berth.
Lutzen, berth.
G. S. Mayes bunkering.
Barge No. 2, berth.
Magnhild, berth.
Sherman B. discharging.

VESSELS DUE TO ARRIVE:—

Aug.
25—Fernfield from Halifax.
Sirdal from Cornerbrook.
Lillemor from Jamaica.
Sonia from Saint John.
Portia from Nfld. ports.
26—Magnhild from Halifax.
Flint II from Montreal.
Rosaland from St. John's.
Reliance from New York.
Edam from New York.
27—Farnorth from Charlottetown.
Reo from Halifax.
Magdalen from Halifax.
28—Lady Hawkins from Bermuda.
Marlis from Halifax.
Silverwalnut from Far East.
29—City of Mobile from Calcutta.
Lenarfish from H'ndia.
30—Newfoundland from Liverpool.
31—Dom. Shipper from Halifax.

ARRIVALS:—

Reliance from New York.
Portia from Nfld. ports.
Pictou County from Montreal.
Ulva from Saint John.

SAILINGS:—

Mary Currie to Local Harbour.
Sherman B. to Local Harbour.
Ulva to Woodside.

VESSELS IN BERTH:—

Mary Currie, berth.
Lutzen, berth.
Portia, berth.
Reliance, berth.
Barge No. 2, berth.

29—City of Mobile from Calcutta.
Lenarfish from Halifax.
30—Newfoundland from Liverpool.
31—Dom. Shipper from Halifax.
Berlin from Bremen.

What We Know About Egg Quality

(Experimental Farms Note) Fresh laid eggs are unsurpassed as an article in the diet. For years they have been known to be of immense benefit to invalids and growing children. Their value as a staple food product for all classes of people has lately been recognized as evidenced by the fact that the average Canadian eats over 300 eggs per year. Scientific experiments have recently shown reasons why eggs are such an important article of food. These reasons may be enumerated as follows: The white is almost entirely composed of protein in readily digestible form; the yolk is rich in a phosphorus containing fat in emulsified form which is easily digested and absorbed; eggs contain vitamins A, B1, B2, D and E, each of which is essential for the prevention of a specific "deficiency disease" and all of which are necessary for the completely normal functioning of the body. At the recent meeting of the Canadian Medical Association a new vitamin choline, responsible for the prevention of so-called "fatty liver" was reported to be found in relatively large quantities in egg yolk. Fresh laid eggs are by no means equal in quality. Eggs may differ in their nutritive and in their physical qualities. In regard to the former, the vitamin content of the egg is the principal quality which varies, although iodine is found in some eggs and none or very little in others. These variations in vitamin and iodine content can be largely controlled by feeding. Vitamin A is found in green feed, alfalfa leaf meal, yellow corn or good quality cod liver oil, while vitamin D is found in cod liver oil. Hens which are fed abundant sources of these vitamins will produce eggs of high vitamin content. Likewise, if hens are fed potassium iodine or certain products of the sea, such as fish meal and oyster shell, their eggs will contain quantities of iodine and will serve as an abundant source of iodine for human beings. Physical differences between eggs take the form of variations in the structure or quantity of the various components of the egg such as thick white, thin white, shell, and yolk. While nothing is definitely known concerning the relative food value of eggs which differ in physical qualities, it is known that certain definite and progressive changes occur in the structure of an egg as it ages after being laid. These changes include: A general loss in weight due to evaporation through the shell; a progressive increase in the size of the yolk due to passage of water from the white into the yolk; and a general liquefaction or thinning of the thick white. As these changes are definitely associated with deterioration it is clear that measurements of these qualities in fresh laid eggs should indicate their relative quality. Investigations to date have disclosed the fact that yolk size, proportion of thick white, breaking strength of shell and strength of yolk membrane are characteristics of the individual bird. It has further been shown that most of the characteristics are influenced by the genetic makeup of the bird. Just how far it is practical to improve these qualities by breeding is not entirely clear at present. It appears, however, that breeding may be relied upon to effect some measure of improvement in the quality of new laid eggs. Invest-

present in progress at the Central Experimental Farm which are expected to shed more light on this important problem.

Adam Smith is Arrested in Texas

GALVESTON, Texas, Aug. 26.—(A.P.)—Adam Smith, a fugitive from justice since jumping a \$25,000 appeal bond following his conviction in the land phase of the noted "Im Alone" case, has been taken into custody in Tampico, Mexico. Garland H. Williams, customs agent in charge of this district, said here today. Smith, who also has been indicted in Oalveston in a huge alcohol smuggling conspiracy, was found living in Tampico, Williams said. As Major Alvin Mrazivsky, retired United States marine officer, when customs agents were tracing a shipment of \$45,000 worth of marijuana. The "Im Alone" case grew from the sinking by a United States coast guard boat of a cruiser by that name. The "Im Alone" of Canadian registry, was shelled and sent to the bottom of the Atlantic after a long chase by coast guardsmen seeking liquor smugglers.

Cowardly Attack on Lady Supervisor

CAMPBELLTON, N. B., Aug. 27.—Miss Jessie Durant, night supervisor at the Hotel Dieu Hospital here, remained unconscious and in a critical condition tonight as a result of a beating early this morning when she surprised an unknown number of marauders in the kitchen hospital. She suffered a fractured skull. From the quantity of provisions and other articles piled on the floor in preparation for a get-away police concluded the assailants must have numbered at least two men. Miss Durant's screams brought other nurses to the scene. They found her unconscious on the floor with a sheet wound about her head. The would-be thieves who gained an entrance by cutting through a wire screen, had not been located tonight. Durant was the victim of a similar experience a year ago when two men attacked her while she was putting cash into the office safe. Leaving her unconscious, the robbers made off with the money and were never apprehended.

SUMMER COMPLAINT CAUSES MANY DEATHS AMONG INFANTS

Thousands of mothers throughout Canada have used

during the past 88 years it has been on the market, and their child's life probably saved by its timely use. Price 50c. a bottle at all druggists or dealers; put up only by The T. Milburn Co., Limited, Toronto, Ont.

QUINTUPLETS MUST HAVE THEIR SLEEP, SO PUBLIC APPEARANCE CUT

Because the babies are not getting enough sleep, Dr. A. R. Dafeo has cut the daily appearance of the Dionne quintuplets from four to two. The quinta have attracted thousands of people to their little hospital near Callander, Ontario. The layout shows some of the crowd viewing an appearance. BELOW the children are seen in their carriage for an afternoon nap. From LEFT to RIGHT, Marie, Yvonne, Annette, Cecile and Emilie.
