THE MAINTAINING OF SOIL FERTILITY

"Every farmer fully realizes that his farm profits depend largely upon the yield per acre of its crops. Whether these crops be fed to livestock or sold for cash, an increased quantity from every acre will swell the receipts of the farm. Low crop yields make an important reduction in the farmer's income. Every additional bushel per acre he can add to his yield improves his business.

There are two things that largely govern the crop yields of land, namely the fertility of the soil and proper cultivation. Land can only be brought to a satisfactory condition of tilth when it is rich in plant food and is carefully cultivated.

It frequently takes farmers, who have been accustomed to tilling virgin soil, a good while to realize that their land is becoming depleted of its essential plant food. Years pass quickly and we fail to appreciate the extent to which we have reduced the fertility of our land.

A well-planned rotation of crops that includes clovers and other leguminous will greatly aid in keeping land in good condition for growing crops. The application of quantities of barnyard manure is very beneficial in restoring fertility. Soil can be maintained in good, vigorous condition by liberal applications of this very excellent fertilizer.

It is usually impossible to have a sufficient supply of barnyard litter to keep a farm up to the highest point of production. In such cases commercial fertilizers can be used both successfully and profitably. In many cases barnyard manure is apt to be deficient in phosphate, and the addition of superphosphate fertilizer will improve results. Farm manure, if liberally used, is apt to promote an excess of straw in crops, and the addition of superphosphate will greatly aid in filling the heads with good plump kernels. This not only increases the yield, but improve the quality of the grain.

Every farmer should make soil tests in the different fields on his farm. This is the only positive method by which you can be certain of what you are doing. Tests for acidity can be made very simply. Any agricultural college will provide farmers with the means for making such tests, and the rank amateur can make them.

Tests for the quantities of available plant food in the soil are not so simple. The daily and even hourly variations in the nitrate content of soils renders the results of any test of very little value. The application of nitrates to a small part of a field will determine, as compared with the part not treated, whether or not the soil is deficient in this ingredient. Plowing down legumes will rapidly restore such a deficiency or nitrates may be applied as commercial fertilizer.

The first deficiency in plant food in your land is likely to be a lack of phosphates. A good plan, however, is to do a little experimenting with fertilizers on your own account, and let the results be your guide.

Land that has too much acidity will not grow alfalfa or sweet clover well. Alfalfa may refuse to grow at all on acid soil. The cure for acid soils is the very simple

application of lime, which can be secured at a low price and will give the farmer greater return in proportion to the expenditure than he can receive from almost any other treatment of his soil. Land should not be allowed to become deficient in lime. Great care should be taken to test every field in several places for acidity, and wherever the strongest reaction takes place the heaviest application of lime should be made. If you are going to apply commercial fertilizers, it is very important to sweeten your soil first if it is at all acid.

Agriculturist.

Islander Receives Papal Honor

The announcement has come from Rome that Rev. J. C. MacKenzie, pastor of Nelson, B. C., has been raised to the rank of Domestic Prelate. The investiture will be held in the Cathedral of the Immaculate Conception, Nelson, about the end of April.

Monsignor MacKenzie was born at Vernon Bridge, and is a graduate of St. Dunlan's College of the class of 1905. He studied theology in St. Bernard's Seminary, Rochester, N. Y., and in St. Thomas Seminary, Denver, Colo., and was ordained in Vancouver in 1911 by the late Archbishop McNeill. Immediately he was appointed pastor of Revelstoke, B. C., with many miles of territory and many missions under his care. For several years he led the life of a travelling missionary through this part of the Rockies. He remained in this pastorate for almost fifteen years, when he was appointed to Nelson at the death of the late Mscr. Althoff.

Monsignor MacKenzie celebrated the twenty-fifth anniversary of his ordination last September, and was signally honored at that time by his parishioners and by his brother priests of the Dioceses of Nelson and Vancouver. Shortly afterwards he paid a brief visit to his native province, where he visited his mother, Mrs. Elizabeth MacKenzie, of Rochford St., Charlottetown. His many friends rejoice in his receipt of this new honor.

Value Of Minerals Supplements With Milk for Bacon Hogs

(Experimental Farm Note)
 Skim-milk is universally recognized as one of the best protein supplements for bacon hogs. Experimental evidence would indicate that a ration, made up chiefly of home-grown grains, (or their by-products) and skim-milk, is lacking in the necessary mineral elements for the proper growth and development of the bacon hog. This is particularly true with a rapid growing strain, capable of making daily gains of 1.5 pounds or more.

Winter fed hogs, particularly when sleeping quarters are dark, damp, and draughty, will show marked evidence of mineral deficiency in the form of crippling or stiffening of the joints. At the Dominion Experimental Farm, Nappan, N. S., various methods of prevention or cure of crippling have been tried out. It has been found that this trouble does not occur when a mineral supplement containing available calcium and phosphorus is supplied. A mixture of equal parts of finely ground limestone, bone meal or bone char, and iodized salt has proven to be a satisfactory mineral supplement, when added at the rate of 2 to 4 per cent to a ration made up of grain and skim-milk. It has given excellent results. For young growing pigs, it is preferable to use four per cent of the mixture. (four pounds in each 100 pounds of grain ration).

When there is little sunshine, as is usually the case in December, January and February, it is advisable to add cod liver oil to the ration at the rate of one tablespoon per pig per day of this period. An example of the value of minerals and cod liver oil for pigs on a grain-skim-milk ration is shown in the data secured at this Farm on a group of pigs fed during the winter of 1934-35. During the first

98 days on test the average daily gain was 46 pounds. Mineral and oil were then supplied and the average gain increased to 1.13 pounds during the next 42 days, with a gain of 1.43 pounds during the last 14 days of this period. Observations made on various lots of bacon hogs on private farms, backed up by data collected at this Farm would indicate that a mineral supplement is necessary to milk ration is fed.

PUBLIC FORUM
 This column is open for the discussion by correspondents of questions of interest. The Charlottetown Guardian does not necessarily endorse the opinions of correspondents.

Continued from page 4

For Algebra and Geometry are but a continuation of Arithmetic and it is hard indeed to conceive of a pupil being thorough in Arithmetic unless he has acquired an elementary knowledge of Algebra and Geometry. And moreover, it has been my invariable experience to observe that pupils make far greater progress in Arithmetic when they study it in conjunction with Algebra and Geometry, and it is occasionally more interesting on the part of teacher and pupils to pursue the study of a few subjects together, rather than Arithmetic alone.

Again, it must be a poor teacher, indeed, who has not observed that the proper study of Algebra and Geometry has a marked influence on the pupil's ability to write good composition. For the very essence of a good composition is orderly arrangement and logical sequence of thought, and what two subjects can better inculcate these principles than Algebra and Geometry can? And I confess that I cannot conceive how a better foundation for the education of a farmer or for any man or woman going into the ranks of skilled labor can be given than a thorough training in the English and mathematical courses provided in our public schools for entrance to Prince of Wales College.

In selecting especially the English and mathematical courses, I do not wish to depreciate the value of Latin and French; but English and mathematics are obviously the essentials, or sine qua non, of any system professing to be fundamental. If however, Latin and French were eliminated from the public schools of our province some system of high schools would have to be established in Prince Edward Island in order to prepare pupils for entrance to Prince of Wales College, providing this institution maintained its present standard in Latin and French, for it would materially lower the standard of graduates in these subjects, if they only began to study them when they entered Prince of Wales College.

A genuine high school system throughout the province would, no doubt, be a great incentive towards higher education, but it could only be established at a great increase in the cost of education, and the average P. E. Island farmer is none too willing to anticipate this increased cost. We think, therefore, that our farmers would do well to go slow and very cautious indeed, when they are asked to join in the slogan for a radical change in our present system of education.

AN OLD TEACHER WHO'LL PAY FOR IT?

Sir,—Some days ago there appeared in your paper an account of a meeting of residents of a well-known country district called for the purpose of considering the project of a hard-paved road through this district. During the discussion one of the speakers remarked that it was impossible for the province to pay for hard-surfaced roads, therefore the Dominion government must be expected to pay for them. Now, Sir, it is not high time that the people of our province, and every other province in Canada, began to consider the utter folly of hoping that the Dominion government will pay for things the provinces can't afford to pay for. For after all, is not Canada a federation of several provinces that pay taxes directly and indirectly into a general Dominion treasury; and does not each province fully expect to receive back an equivalent of what it has paid? Therefore if the people of our Island don't wish to pay for paved roads, just what other province is going to wish to do it for them?

It was Barnum who said that the people dearly loved to be fooled; and it would seem as if the people of every province in Canada were now living in a fool's paradise, judging by the extent to which this idea of "the Dominion paying for it" has run rampant all the way from Vancouver Island to our own Island. Go to it then Island brothers—build your costly roads and bridges and your grand car ferries and other grand tourist projects, and let your hearts cheer you mightily as you contemplate their magnificent designs, but know for a certainty that the people of Ontario or British Columbia, nor yet the a-l-f-sufficient tourist, but you and you alone shall finally pay for them. Paved roads may or may not be a blessing to the province, but there can be no good whatever in continual delusion and self-deception as to who has to pay for them.

ON-LOOKER

Good Friday being a holiday, the 8th "Trinity" Boy Scout Troop enjoyed a very delightful hike. Hiking five miles out past the airport, out in the wide open, they reached their destination about 12:15, eating their dinner, after which they practiced compass points and cooking of twigs.

As all Scout Troops, the 8th Trinity have their fun; on this hike it was supplied through the feasting of one Buddy Hickson. They returned home about 5 p. m., thoroughly happy but tired. These boys were under the supervision of S. M. Taylor and A.S.M. Chandler. This is keeping the OUT in scouting.

Scout News and Notices

The hiking weather is about back and we can once more start our hiking and camping activities in real earnest. Make every hike you go on a constructive one, where you go to a definite place for a definite purpose. See that when you return from a hike you feel that you have accomplished something and haven't been on just a nice long walk. When on a hike practice a few of the following: Compass Points, Trekking, Stalking into Camp, Cooking, Signalling, etc.

The Scouts in Montague are already at work preparing for the summer camp which they expect to attend. In the near future they plan to have a sealed order. The Cubs there are also preparing for their outing, and they are a fine bunch of boys.

This week being Easter, I am going to take up a special topic and ask all Scouts to think it over. We will presume that all boys are Tenderfoot and are in the midst of their Second Class. You should have had time to come to a definite decision regarding Scouting. Is it what you expected or is it better or worse than you expected? Go back over your Tenderfoot and ask yourself "Am I keeping in touch with this Tenderfoot or have I forgotten it?" and if you feel that you have perhaps forgotten some part of it, then don't you think it was a waste of time to bother to learn it in the first place? Practice makes perfect and you can't expect to get anything out of Scouting unless you put something into it. Leaders often feel, when running a meeting, that it is just time wasted because their boys are not doing their part. Fellows think this over well. Do your part. When asked to do something don't stop and wonder what you are going to get out of it, but do it with an energy desirous of keeping your Tenderfoot promises.

Answers to last week's question. Three different ways of telling North other than the compass. 1. By the moss on the North side of a tree. 2. By the top of evergreen trees pointed toward the South. 3. By the North Star. There are two things B. P. says about happiness. Not to take things too seriously and to make the best of what you have got. To look on life as a game and the world as a playground.

The second is to let your actions and thoughts be directed by Love. A Thought For The Week: When sweet things turn sour, we often say they are spoiled. What about a boy who goes through the same process? A Smile For The Week: "Yes," exclaimed the self-made man, singing his own praises justly, "I began my life as a barefooted boy." "And I wasn't born with boots on either," came a remark from a member of the audience.

"BUSY BEAVER."

Yours for better Scouting.

IN MEMORIAM

REV. J. D. MACKENZIE
 The funeral was held in Avonmore, Ont., on Saturday, 0. Rev. John Dougald MacKenzie, minister of the Presbyterian Church there, who died last Friday at the age of 63. Mr. MacKenzie was minister of St. Andrew's Presbyterian Church in this city from 1925 until 1931. He was born in Inverness, Que.

Mrs. Simpson, Edward May Take Vows in This U.S. Couple's Home

Mr. and Mrs. Charles Bedaux

The life of the Duke of Windsor, Britain's former king, became even more closely linked to America with the possibility that his marriage to Baltimore-born Mrs. Wallis Warfield Simpson may take place in the Chateau de Conde, near Tours, France.

Host and hostess there, now making preparations to receive Mrs. Simpson, are Charles E. Bedaux and Mrs. Bedaux. He is a naturalized she a native American. Before her marriage Mrs. Bedaux was Miss Fern Lombard of Grand Rapids, Mich.

Bedaux is an industrial engineer who spent much time working in America, with offices in Cleveland, Chicago, and New York. His chateau is a 16th century affair in the picturesque valley of the Indre, which he has occupied little, for in intervals of his industrial work, he and Mrs. Bedaux have engaged in several adventurous trips. In 1930 they drove the first motor caravan to cross the African continent, covering 9500 miles in five months, hunting big game and mapping their route through Kenya, the Sudan, French Equatorial Africa, Nigeria and Algeria.

In 1934 they adventured again with an expedition into unknown regions of northern Canada by snow-tractor, which was somewhat less successful. Mrs. Bedaux, the expected hostess to Mrs. Simpson, accompanies Bedaux on all his expeditions, attired in slacks, flannel shirts and boots.

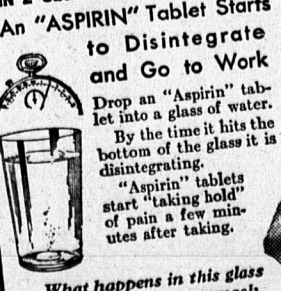

Renovation of the chapel and other rooms in the historic Chateau de Conde suggest that the expected wedding of the Duke of Windsor and Mrs. Simpson may be planned there.

and educated in McGill University and the Presbyterian College here. He held pastorates in Lunenburg, Ont., Barrie, Yt., High River, Alta., and Morrisburg, Ont., after which he came to Montreal.

For three years he was moderator of the Glengarry Presbytery and at the last Montreal and Ottawa Synod he was nominated as Moderator. He is survived by his widow and one son, Charles. (Rev. Mr. MacKenzie was for a number of years pastor of Zion Presbyterian Church in this city).

For an Early Morning Headache—DO THIS

IN 2 SECONDS BY STOP WATCH An "ASPIRIN" Tablet Starts to Disintegrate and Go to Work

Drop an "Aspirin" tablet into a glass of water. By the time it hits the bottom of the glass it is disintegrating. "Aspirin" tablets start "taking hold" of pain a few minutes after taking.

What happens in this glass happens in your stomach!

Enjoy Relief Before You've Finished Dressing

If you wake up with a headache, "ASPIRIN" tablets are ready to start working almost the instant you take them. (Note illustration.) So, next early morning headache you have, try this way. "Aspirin" tablets are made in Canada. "Aspirin" is the registered trade-mark of the Bayer Company, Limited, of Windsor, Ontario. Look for the name Bayer in the form of a cross on every tablet.

Restless Nights - Peppless Days Take the Joy Out of Life

The potent cause lies in the hurried life we lead, in the extreme nervous tension and fever heat with which we follow in the pursuit of wealth, position and pleasure.

Late hours, want of necessary rest, excessive mental or physical exertion all put a strain on the system it is unable to withstand. No wonder then you pass restless nights and get up in the morning with no ambition to go about your daily tasks.

Take Milburn's H. & N. Pills and see what they will do for you.
