Describes Visit To Tyne Valley (Island Traveller in Halifax Herald)

Tyne Valley is beautifully situated in that it is a village in a valley, surrounded by hills. The railroad passes within a mile of the settlement and the station is known as Fort Hill. The village is known as Tyne Valley.

Canada's western coastline might soon be the locale of a thriving industry if the survey of weed beds now being made by the British Columbia government is successful.

While the average person considers seaweed a nuisance, chemists look upon certain varieties as important contributions to the world's industrial growth.

Due to the jellying qualities of alginate acid, its main attraction to the textile industry is its use as a stabilizer in ice cream to keep it from setting to liquid, in chocolate milk to hold the chocolate particles in suspension, and in cream soups and as a fruit jellying agent, according to Mr. Walkington.

Interesting possibilities are foreseen for an alginate preparation which will make custards and puddings with cold milk and thus eliminate the trouble of cleaning pans in which milk has been boiled. The powder is simply dissolved in water and added to the milk in a few minutes sets to the desired thickness.

Because of their adhesive properties and their ability to dissolve quickly in water, alginates are valuable dispersing agents in pills and capsules. They form viscous solutions which can be drawn into fibres like rayon or made into sheets. They are also used in cellulose acetate film.

A recent announcement by one of the leading surgical bandage manufacturers indicates that an alginate product in gauze form may find wide use in controlling bleeding during surgical operations. The gauze may be left in the body when the incision is sewn up and gradually absorbed by the tissue fluids, according to the C-I-L magazine article.

Alginates are also widely utilized in the cosmetic and pharmaceutical industries. Many toothpastes, hand jellies and coating compositions contain them. They are found in creams used to protect the hands from paint and other oily materials.

"These are only a few examples of the uses of alginates." Some authorities estimate they will enter into 50,000 products, says the writer.

of former days, because a few years ago we knights of the road could always depend on an excellent meal and a comfortable room at the home of Mr. and Mrs. Frank Flats. However it is not so today, as Mr. and Mrs. Flats no longer cater of the travelling public and we miss their hospitality very much.

Hooked rugs represent a type of handcraft textile work brought to America by Swedish and Scottish settlers.

UNRRA Shipments To Czechoslovakia

Latest dispatches from Czechoslovakia indicate that UNRRA's relief program is hastening the country's long-expected recovery.

UNRRA goods are being paid for further relief and rehabilitation projects which are basic to the country's reconstruction.

Under UNRRA's agreement with the Czechoslovak Government, UNRRA goods are sold at prices fixed by the government. Proceeds of such sales are kept in a special fund which must be used for further rehabilitation.

UNRRA's complete program will yield an estimated revenue of \$75,000,000 which will be spent over a period of five years in a special fund for relief and rehabilitation. Of this sum, the Czechoslovak Government's extraordinary budget allocated \$70,000,000 for relief and rehabilitation expenditures this year.

More than \$14,000,000 was spent between March 29 when the Czechoslovak Government approved the budget, and June 30, included in person charges under the Prohibition Act was remanded to a later date.

ALBERTON - Mr. R. T. Larkin spent the week-end with his mother, Mrs. H. J. Larkin.

Mr. John Kell, Malpeque, was a visitor here Tuesday. He was enjoying a motor trip to North Cape with his nephew, Mr. Eyskine MacNutt, Charlottetown.

Col. T. B. Rogers, Charlottetown, spent Tuesday here on business.

Major C.M. Williams was on official business this week-end accompanied by Mr. and Mrs. Wallace Rogers, Charlottetown, guests of Mrs. H. J. Larkin.

Mrs. Florence Westfield and Mrs. Russell Matthews spent Tuesday Summerside.

Mr. C.M. Morrissey, M.L.A. made a short visit to Alberton Wednesday.

Mr. F. C. Ramsay, M.L.A. has been indisposed a few days. Mrs. Windsor is the guest of Mrs. H. J. Larkin.

Mr. and Mrs. Jas. Keefe motored to Moncton Tuesday, to spend Mr. Keefe's parents who came from Band Alberton to spend a month with their son. Mrs. E.R. Burke joined the motor party.

PLASTIC EYE THAT MOVES - CLEVELAND, Sept. 19 - (B. U. P.) - A new artificial eye that is permanently stitched into the eye socket and moves with the wearer's other natural eye was reported perfected recently.

Dr. Albert D. Ruedemann, chief eye surgeon of the Cleveland Clinic and a pioneer in the field, developed the new eye with Fritz Jardon, of the American Optical Co., Southbridge.

Glass eyes must be removed daily and washed. Ruedemann's durable plastic eye is attached to the muscles and sewed to the eye in movement and appearance. It closely resembles a natural eye.

A metallic mesh covering the back portion of the plastic eye was the basis in development of the artificial eye capable of moving in co-ordination with a person's good eye, Dr. Ruedemann said.

Some 200 persons have been successfully fitted with the eye but the product is not yet available in quantity.

SHIPS URGED FOR HOMES - MONTREAL, Sept. 18 - A proposal that the Canada Steamship Lines passenger ships should be wintered in Montreal, instead of being frozen in ice at Sorel, to provide emergency accommodation for a thousand "desperate families" was made today by the Silver Cross Mothers of Montreal.

The organization was active in promoting the use of the Place Viger Hotel for the wintering of the ships, but this will meet the needs of only 100 such cases.

Out of 3,000 veteran families and individuals in Montreal, and district looking for homes, there are at least 1,000 "desperate" cases - families in which there are two or more children, the organization announced today.

"We suggest that as a temporary measure, the ships of the C. S. L. should be brought to Montreal this winter to provide accommodation for these necessitous families."

The organization pointed out that the move would bring revenue to the company, and that, if the staff were employed on the vessels, it would prevent a certain amount of unemployment.

The necessary accommodation, both for sleeping and messing, was available on the ships, the Silver Cross Mothers said, and the only thing needed to make the ships comfortable for the families was heating which could easily be furnished.

Victoria Pier would be a suitable place to moor the vessels, it was explained.

FIGHTING TUNA LURES ANGLERS TO MARITIMES

By IRVING WHYNOT (Canadian Press Staff Writer)

HALIFAX, Sept. 18 - (CP) - An unofficial "Battle of the Atlantic" is being waged off the Nova Scotia coast as dozens of sea anglers match strength and experience against the cunning and fighting spirit of the giant bluefin tuna.

Big-game professional sportsmen have always regarded the tuna field as their own, one in which occasional catches by feminine and adolescent anglers were cast aside as "lucky strikes."

Old-time bluefin guides shook their heads in amazement when 16-year-old Pat Brodeur of Montreal hooked and landed a 720-pound bluefin after a 2 1/2-hour fight.

As far as can be determined, the young fisherman has established a world's record for his age.

Patsy Duffy, a 15-year-old New York miss, hooked one of the undersize fighters but, after "daring" him for 90 minutes.

For records, Mrs. John Randolph of Ohio, Conn., claimed the women's top spot by landing an 800-pounder after 1 1/2-hour fight.

Also a record breaker is Mrs. John Manning of Los Angeles, Calif., who set a new 39-inch world mark when she headed a 72-pound bluefin in 30 minutes, one of the fastest times ever recorded for landing a bluefin of more than 500 pounds.

In Nova Scotia the history of the sport goes back to 1871 when Thomas Pattin caught several large bluefin off the coast and horse mackerel. For sometime he used 30 fathoms of ordinary cod-line, home-made, twisted reel and an eight-inch hook.

Record Catches - Credit for development of a rod and line of sufficient strength and flexibility is given Capt. Laurie Mitchell. The late Zane Grey, famous American author, came to Nova Scotia attracted by Mitchell's efforts and after considerable fishing landed a 750-pound tuna to capture the world's record.

It remained the top catch until 1933 when Mitchell landed a larger tuna across the Atlantic in the North Sea but the reel was broken by "Thomas Howell" who landed a 864-pounder off Liverpool, N. E., in 1941. This record is unbroken.

The fish run in great size off the Nova Scotia coast where specimens weigh more than half a ton are frequently harpooned. Fish weighing 800 pounds are not uncommon.

They take the bait—usually herring—easily but from that moment on the angler is in for a fight. Their characteristic battle is a series of lurch dives, each ending near the surface and promptly followed by a powerful give to the depths from which they must be urged by skilful "pumping."

As a general rule the best fighting months are July, August and September but they remain fairly plentiful in October and have been taken as late as November.

Amino Acids To Save The Starving

CHICAGO, Sept. 18 - World hunger has focused attention on amino acids—the bricks out of which human bodies are built.

The ways of getting more plentiful supplies of these complex nitrogen-containing substances were the subject of a dozen papers presented before the meeting of the Chemical Society.

Man must eat to live—for two reasons. First, eating is like shovelling coal into a furnace. The sugars and starches in foods are burned by the body to create heat and energy. Some of them are stored up as fat.

Second, eating builds up the body itself. This is the function of the proteins in food. These are extremely complex substances made up of amino acids. There are 19 of these known to biological chemists. They are contained in meats, vegetables, milk, eggs—not in sugar, starch or whiskey.

Probably all 19 are necessary, but without a plentiful supply of at least seven of them any human being will starve to death in a short time, regardless of how much bread or potatoes he eats.

This happens to be the big problem of feeding the famine areas of Europe at the moment, as the chemists were told by Prof. Edward F. Degering of Purdue University.

It is relatively simple to provide the hungry populations of Europe with enough corn or wheat to keep up body heat and energy. This means very little, however, without the protein. It is chiefly from lack of these that millions are starving.

Degering's proposal is to ship the wheat and corn as is, adding amino acids to them.

McGILL GRAD CONTEST STIRRS VETS

A Californian, with the breezy nonchalance of the "perpetual" winner, claims to be the oldest graduate of McGill University, but a new group of contestants in Ontario is now challenging his claim.

William E. Thompson, M. D., 82, now living in California, believes he is the oldest living graduate at 87 years of age, but the record is claimed by Rev. William Howitt, B. A., 83, of Prescott, Ont., who is 88.

It would be relatively easy for the McGill Graduates' Society Victory Reunion officials to nick a winner. If they had all the birth before them. There is, for instance, Rev. Dr. G. Blang, B. A., 77, of Toronto, but his birth date is not on record.

John G. G. Kerry, B.Sc., of Port Hope, Ont., also lays claim to age distinction as well as a remarkable student record at the University. He captained a football team, was president of a McGill hockey club, won a gold medal in engineering, and as well married the grand-daughter of the first principal of McGill.

The oldest living graduate is to be picked in time for the Reunion, which opens October 3 and continues until October 6. Some 3,000 graduates are expected to attend and participate in a round of activities now being organized.

BRISTOL, England.—The first consignment of port wine to reach Bristol since the war has been unloaded.

Record Catches - Credit for development of a rod and line of sufficient strength and flexibility is given Capt. Laurie Mitchell. The late Zane Grey, famous American author, came to Nova Scotia attracted by Mitchell's efforts and after considerable fishing landed a 750-pound tuna to capture the world's record.
