A large assortment of the newest shades. A really wonderful Hose for the money. Special Price 49c

Lovely Hand Bags for Fall

A wonderful line of Ladies' Leather Hand Bags, latest shades. Prices \$1.98 to \$6.98

Gov-General And Party At Jasper Park

JASPER, Alta., Aug. 21—Indulging in complete relaxation following their trip this far across the country the Earl and Countess of Bessborough have been favored with perfect weather for the first week of their stay in Jasper National Park. Although Their Excellencies have been content to rest quietly by the shores of Lac Beauvert, Viscount Duncannon and Lady Ponsonby were quick to take advantage of the opportunity for fun outdoors in the mountains. Already they have covered many of the delightful trails through the Athabaska Valley on early morning rides and the lodge links and swimming pool have seen much of them.

One of Lord Bessborough's excursions carried him to the Moraine at the base of Mount Edith Cavell, a spot which he enjoyed on his visit last year. There a whistling marmot obligingly posed for the parties' camera. Yesterday the party attended church service where His Excellency read the lesson.

Compel Truck Drivers to Rest

WILMINGTON, Del., Aug. 21—Truck drivers are snoozing along Delaware's highways today, but it's due neither to the depression nor to the recovery programme.

State police are stopping trucks and, whenever they find the drivers or helpers have been working more than 16 hours, the troopers compel them to sleep. Confiscation of drivers' licenses for eight hours assures compliance.

The action comes as a result of three fatalities within an hour recently, each blamed on a dozing driver.

GUARANTEED PLANT FOOD

An example of the practical utility of various branches of the Dominion Department of Agriculture is afforded by The Fertilizers Act. The main purpose of this Act is to protect farmers and other buyers of fertilizer against fraud. The provisions of the Act require the sale of fertilizer under registered guaranteed analysis and this guaranteed analysis must be fully met, so that buyers shall have delivered to them as much plant food as contracted for. The fertilizer inspectors of the Seed Branch inspect each fertilizer offered for sale, and samples are submitted by those inspectors to official analysts of the Chemistry Division for report. The results of the analysis are compared with the vendor's guarantee, and when failure to meet this guarantee is proven the seizure and prosecution provisions of the Act are set in motion by the Commissioner of the Seed Branch with serious consequences to the offender, because the Act comes under the Criminal Code of Canada. Further, it is not generally known that the results of fertilizer analysis are published in an annual report of analyses by the Department of Agriculture so that farmers and other buyers may know the record of each of the vendors in meeting their guaranteed analysis. Farmers are invited to use this annual report of analyses as a guide when buying fertilizer. The report may be had on request from The Publications Branch, Department of Agriculture.

Valuable Collection Sub-Arctic Birds

TORONTO, Aug. 21—(C. P.)—Bird specimens numbering 250, collected along the Hudson Bay coast between Churchill and Eskimo Point are ready for shipment to the Royal Ontario Museum to be added to the collection of 19,000 used for research and ornithological studies. The collector, Arthur C. Twomey of Edmonton, student of the University of Alberta who undertakes this work as a private enterprise, has had many specimens accepted by the museum during the last three years. A selection will be made from the shipment when it arrives.

L. L. Snyder, ornithologist at the museum, says the collection of birds from the sub-Arctic is still small. The birdskins used for studies are kept in steel cupboards and placed in long trays, several members of a species together for comparison and examination for variations. The birds appear in natural form, but are, in fact, merely the skins with feet, beak and feathers intact. The skins are turned and stuffed with cotton to provide a body.

The birds from Hudson Bay will not be on exhibition, but share the extensive moth-proofed cupboards that already contain close to 20,000 birds. Of the 768 species which belong to North America, the Royal Ontario Museum has a fair representation, but there is a requirement for larger collections of the Arctic birds to make more complete the knowledge of Canadian species.

Mr. Twomey will spend the remainder of the summer, it is learned, in collecting other specimens found in Northern Alberta. He is one of several ornithologists and naturalists who make collections for the museum.

Sightless Doctor Made Fine Speech

DUBLIN, Ireland Aug. 21—(C.P.)—A remarkable feat of memory was performed by Dr. T. Gillman Moorhead, the new president of the British Medical Association, who is blind, in making his presidential speech at the annual meeting of the association in Dublin.

He spoke for nearly an hour, keeping strictly to the text of a prepared speech. It dealt mainly with the history of the association in Ireland and was full of dates and names, yet he never hesitated. He made but two mistakes, and they were mere slips of the tongue which he corrected as soon as the words were uttered. Water and a glass stood on the table in front of him, but when once he wanted a drink the glass had to be put into his hand. There were indirect references to his courage in speeches made by delegates, and one speaker said that he had the affection of every member of the association. When he finished his presidential address there was tremendous applause.

AVIATION WEATHER FORECASTS

Apart from evading the possibility of positive danger to aviators, one phase of the value of weather forecasts was demonstrated recently when a north-bound pilot flying the Pacific Coast route with a 40-mile tail wind passed 4,000 feet below a south-bound pilot also getting the benefit of a 40-mile tail wind.

TREND IN FERTILIZERS

The increasing attention given to pasture fertilization in the stock raising and dairying districts of Canada is creating an appreciable increase in the demand for fertilizers, more particularly those furnishing nitrogen and phosphoric acid—the former to increase the protein content of the grass and the latter to give a higher ash content, says the Dominion Chemist. In recent years the trend in fertil-

izer practice has been towards the use of more highly concentrated materials since this means a saving in freight and handling charges. This is evidenced by the increased manufacture and sale of 20 per cent and 45 per cent (triple) superphosphate and of ammonium phosphate carrying approximately 10 per cent nitrogen and 47 per cent phosphoric acid. The increase in the profitable use of fertilizer for grain crops in the Prairie Provinces has been due largely to the

NOVEL "EGGS"

Now for an entertaining game for your party. The leader asks a question in which the word "eggs" is used, and the one who supplied the most appropriate answer in which the word or syllable is used, has the privilege of putting the

next question to the company. For instance, the question might be, "What eggs dig?" The one who answered "Eggscautors" would obviously be the one to use the word the questioner had in mind, and would of course, take the lead for the next game. He might ask what eggs travel—an answer to which would be, "Those which go on 'expeditions,'" and so on; always pronouncing ex as "eggs."

CANADIAN WOOL CONSIGNMENTS

In response to the advice and efforts of the Canadian Co-operative Wool Growers, Ltd. the loyalty and appreciation of sheep owners is shown by the fact that the range area of Southern Alberta has contributed for co-operative grading and sale over 1,650,000 pounds (68 car loads) of wool this year. The Eastern Alberta Wool Growers Association at Hanna has already sent forward some 110,000 pounds

and the Association at Calgary reports approximately 150,000 against 80,000 a year ago. The range area of Southern Saskatchewan has contributed 380,000 (13 car loads) in comparison with 350,000 in 1932. All other Western districts are either holding their own or showing slight increases and it is evident that well over 3,000,000 pounds of Western wool will be handled either at Weston, Ontario, or New Westminster, B. C. A similarly satisfactory showing is recorded by the Eastern Provinces.
