—MRS. MABEL Newsome will speak in Bedford United Church, Sept. 11 at 7:30 p. m., L-1219.

—SPECIAL lip-stick fill with Gardenia rouge at Taylor Drug Company, Kensington, L-1224-9-10-51.

—Mr. Albert Noonan, O'Leary accompanied by his sister Ruth has returned home after spending a very pleasant holiday in Bedeque, the guest of Mr. and Mrs. Daniel Noonan and family.

—Miss Pauline McKeown, of Charlottetown, is enjoying a pleasant holiday in Kensington, the guest of Mr. and Mrs. T. M. Howatt.

—Mr. Clifford Rodd, of Charlottetown, was a visitor to Kensington on Saturday.

—Mr. James Bernard and family are now comfortably settled in their new home on Victoria St.

—Mrs. (Dr.) Gillis accompanied by her daughter Margaret, Miss Eileen Shea, Miss Yvonne Le Blanc, and Miss Gladys Le Blanc, motored to Summerside on Tuesday.

—Mr. W. T. Bentley, of Summerside, was a visitor to Kensington on Tuesday.

—Mr. A. R. Howatt, of Charlottetown, was a visitor to Kensington, on Tuesday on business.

—Mr. William Ready, of Charlottetown, was a business visitor to Kensington on Tuesday.

—Mr. George Brooks was a business visitor to Charlottetown Wednesday.

—Mr. Harold Dunning of Clifton, was a visitor to Kensington on Wednesday.

—Mr. R. T. Morrison of Summerside, with his assistants are busy engaged in installing the plumbing work in Mr. Norman McDonald's new house.

—Mr. Edward Murphy of Sea View, was a business visitor to Kensington, on Wednesday.

—Mr. and Mrs. Percy Driscoll and two children motored to Charlottetown on Wednesday.

—Mr. James McNeill was a business visitor to Summerside on Wednesday.

All teachers on the Kensington High School staff attended the Local Teacher's Convention, held in Summerside High School on Wednesday.

—Mr. Hymie Kashetsky and Mrs. William Hughes were visitors to the Capital on Wednesday.

—Mr. Oliver Campbell accompanied by Mr. Charles McInnis motored to Charlottetown on Wednesday.

—Mr. Hymie Joelman, who is now working in the western part of the province, was a visitor to Kensington on Wednesday.

—Mr. Eric Sheen, Mr. Everett Hughes and Mr. Elmer Champ were visitors to Summerside on Wednesday evening.

—Mrs. Benjamin Condon has left for Malden Mass, where she will visit her daughter, Mrs. Clarence Mosher and friends. She expects to be away a month.

The rain storm of Wednesday evening has once more delayed a number of farmers in this vicinity from finishing the storing of their grain. A number of those who have finished are busily engaged in digging their potatoes.

A large number of young and old alike after gathering in St. George's Hall on Tuesday evening to enjoy the motion picture which was to be shown, were badly disappointed when advised that the picture could not be shown, on account of the machine receiving a jolt on the way up.

On Saturday evening about nine-thirty, all business in Kensington was brought to a standstill when the town was put in complete darkness due to some minor trouble in the electric light plant, which took some time to repair. The darkness caused merchants and housekeepers to revert back to the old standbys, candles and oil lamps.

An enjoyable time was had Tuesday evening at the home of Mr. and Mrs. Lloyd Howard, when Miss Helen Higgins was entertained to a farrow banquet by her large number of young friends prior to her departure for Charlottetown where she will enter Prince of Wales College. An appropriate address was read by Miss Jean MacLean and was capably and sincerely responded to by Miss Higgins. After a full evening of games, songs, etc., came to an end, a dainty lunch was served.

### TODAY ONLY

#### HIS FIRST FULL-LENGTH FEATURE!

"Put it on your 'nose' see 'em' list!"  
—Jimmy Fidler

Mr. Leonard Connolly has left for his home in Moreil.

Mr. Howard Boyle was a recent visitor to Summerside.

Mr. James Kennedy was a visitor to Charlottetown on Wednesday.

Mr. William Lawson, was a business visitor to Charlottetown Saturday.

Mr. George Hillz accompanied by Mr. Joseph Ready, motored to Summerside Saturday.

Mrs. Marion Phillips, of Foxley River, was a visitor to Kensington, on Saturday.

Mr. Ernest Mountain recently returned home from a pleasant holiday in Summerside.

Mr. George Sims, of Pugwash, N. S. enjoyed the week-end at his home in Kensington.

Mr. Harold McFarlane, spent a pleasant week-end with his parents, Mr. and Mrs. Emery McFarlane, Kensington.

Mr. Edward McDonald, left on Monday morning for Halifax, N. S. where he will take up a new position. His friends wish him success in his new work.

Miss Pauline McKeown, of Charlottetown, is enjoying a pleasant holiday in Kensington, the guest of Mr. and Mrs. T. M. Howatt.

Mr. Clifford Rodd, of Charlottetown, was a visitor to Kensington on Saturday.

Mr. James Bernard and family are now comfortably settled in their new home on Victoria St.

Mrs. (Dr.) Gillis accompanied by her daughter Margaret, Miss Eileen Shea, Miss Yvonne Le Blanc, and Miss Gladys Le Blanc, motored to Summerside on Tuesday.

Mr. W. T. Bentley, of Summerside, was a visitor to Kensington on Tuesday.

### INCREASE IN FIELD CROP YIELDS NOTED

#### Potato Crop In Slightly Better Condition Than Last Year, Report.

(C.P. By Guardian's Special Wire) OTTAWA, Sept. 9.—Canadian farmers are now harvesting and threshing the largest wheat crop since 1932, estimated at 358,433,000 bushels by the Dominion Bureau of Statistics today.

In its first estimate of field crop yields for 1938 the bureau reported higher production all along the line than last year but the most marked improvement was in the spring wheat in the three Prairie Provinces. These provinces include the Canadian wheat belt and have suffered severely from drought in recent years.

While drought was not wholly absent from the wheat belt, it portended it had moved north and left little of the wide blank spots with no crops at all, which dotted the map a year ago.

Estimated wheat production at 358,433,000 bushels is nearly double the final estimate of the 1937 crop which was 182,410,000 bushels. It is the highest production since 1932 when 433,061,000 bushels were harvested.

Other key forecasts in today's report were:  
Spring wheat (included in the total) 338,396,000 bushels against 163,721,000 in 1937;  
Spring wheat in the Prairie Provinces 334,000,000 against 159,000,000;  
Fall wheat 20,037,000 against 18,689,000;  
Oats 393,071,000 against 268,442,000.

The United States Department of Agriculture today placed the American crop at 939,972,000, somewhat under previous estimates.

#### Marketing Problems

Anticipating marketing problems due to high yields in most producing countries both the Canadian and United States governments have taken steps to assure their producers a ready market at stable prices.

In Canada the Wheat Board will buy all wheat at prices based on 80 cents for No. 1 northern at Fort William and any losses sustained by the board will be met from the Dominion treasury. The United States government has announced a plan to subsidize exports of wheat and flour.

Barley production is estimated at 108,915,000 bushels, which is 25.8 million bushels larger than the 1937 crop.

Fall rye is placed at 9,516,000 bushels and spring rye at 2,849,000 bushels.

Each of these crops is more than double the amount produced a year ago.

#### Hay And Clover

The main hay and clover crop is estimated at 13,604,000 tons, an increase of almost a million tons over the production in 1937. Declines in hay and clover production occurred in Prince Edward Island, Nova Scotia, Manitoba and British Columbia with increases in the remaining provinces more than offsetting these declines.

Potatoes are in slightly better condition for the whole of Canada with improvement over last year occurring in most provinces, including Prince Edward Island, New Brunswick and Ontario.

Pastures are notably improved over last year in the Maritime Provinces, Quebec, Saskatchewan and Alberta while the other provinces have experienced slight declines, except in British Columbia where drought has caused an appreciable decline.

Spring field work in the Maritime Provinces got under way during the last half of May, and was completed earlier than in the very late season a year ago. Fine growing weather prevailed throughout June and early July. Since then, a more than usual amount of rainfall made harvesting difficult and interfered with the harvesting of spring grains. Wheat was rusted this year in the Maritimes and in eastern Quebec.

#### JUST SHOP TALK

SYDNEY—W. J. O'Reilly, master of a grammar school here and Australian test cricket bowler, received a telegram from his colleagues in the form of a report card. It read: "Satisfactory, and tries."

day evening at the home of Mr. and Mrs. Lloyd Howard, when Miss Helen Higgins was entertained to a farrow banquet by her large number of young friends prior to her departure for Charlottetown where she will enter Prince of Wales College. An appropriate address was read by Miss Jean MacLean and was capably and sincerely responded to by Miss Higgins. After a full evening of games, songs, etc., came to an end, a dainty lunch was served.

### DAIRY TOPICS

Prepared by Provincial Department of Agriculture in Co-operation with the Directors of Dairymen's Association.

(Continued from page 10.)

#### ROUGHAGES

##### ALFALFA

Alfalfa is one of the best roughages for dairy cattle. It does not stand pasturing well, it makes splendid hay. It is richer in protein than red clover hay but contains less fat and carbohydrates. Alfalfa is cut just when the new shoots are starting at the base of the old plants, yields the maximum amount of feed with a large percentage of leaf. By feeding good alfalfa hay, the dairyman is able to reduce his grain ration considerably. It makes an excellent feed for young and growing stock as well as for milk cows. It also makes a valuable feed for soiling purposes as it grows rapidly in the spring and comes up quickly after cutting.

##### RED CLOVER

Red Clover is another good legume roughage for all classes of dairy stock when used as a substitute for alfalfa. It does not yield as much per acre as alfalfa but works well into the crop rotation and stands pasturing better. To make the best quality hay it should be cut soon after it is in full bloom and cured to preserve as much leaf as possible. In feeding value it resembles alfalfa.

##### ALSIKE

Alsike clover is about the same in composition as red clover but is not so generally grown for hay in this country. It is not so palatable and is not as well liked by dairy cattle. It does well in damp soils where alfalfa will not grow. If threshed, both alsike and red clover straw have slightly higher feeding value than the cereal straws.

##### SWEET CLOVER

Sweet clover gives best results as a pasture crop, a silage crop or a soil builder. When used for pasture it should be used early in the season to prevent the crop becoming coarse, bitter and unpalatable. It used along with some other pasture crop. As a substitute for corn for ensiling purposes it is one of the most satisfactory crops. It yields a silage that is higher in protein than corn silage and its palatability of good quality corn silage. In feeding sweet clover silage to milk cows a smaller quantity will be required than when corn silage is used. It should be cut when the bloom is appearing and put in the silo as soon after cutting as possible. Care should be exercised to see that the silage is well tramped in the silo to prevent mold growth. When used for silage or roots it should be moistened with three times its weight in water before feeding and mixed with some molasses to take the place of part of the sugar taken out of the beet and to improve its palatability. It is a bulky feed and has a laxative effect on the animal. It is low in protein and should be fed with a protein-rich ration.

##### DRIED BEET PULP

Dried beet pulp, a by-product of sugar refineries, is often fed as a substitute for silage or roots. It should be moistened with three times its weight in water before feeding and mixed with some molasses to take the place of part of the sugar taken out of the beet and to improve its palatability. It is a bulky feed and has a laxative effect on the animal. It is low in protein and should be fed with a protein-rich ration.

##### POTATOES

When potatoes are cheap they are sometimes fed to livestock. As a feed for dairy cattle they should be given in very small quantities as they are liable to cause an undesirable flavour in the milk.

##### CONCENTRATE MIXTURES

Home grown grains are generally too low in protein to meet the requirements of the high producing cow. It is therefore necessary in preparing rations to add protein-rich feeds which are made up largely of soyabean meal, alfalfa and other manufacturing processes. To insure variety in the ration it is wise to select feeds from a number of sources. The cost of these various by-products also governs to a considerable degree the amount that can be used with economy. When hay from the legumes is fed the amount of protein in the grain mixture can be materially reduced as the protein is supplied in the hay. This is one of the strongest arguments for the use of hay from the legume crops. Where timothy or grass hay is used the protein grain mixture may be used to meet the requirements of the ration.

Bulk is another factor to keep in mind in preparing a concentrate mixture. A pound per quart is a good rule to follow in measuring the bulk of a grain ration. Mixtures weighing more than this are usually too heavy and pasty for satisfactory results, and mixtures weighing less are satisfactory providing this bulk has not been obtained by using coarse fibrous concentrates in excess, thus lowering the nutritive value of the mixture.

All grain should be crushed or rolled before feeding. This prevents waste, aids mastication and facilitates mixing. Too fine grinding tends to make the grain pasty and may reduce the palatability. Soaking, steaming or cooking feeds for dairy cattle is not advised except with such feeds as dried pulp or malt sprouts.

The following rules will serve as guides to the amount of concentrates that should be fed:

1. Feed one pound of grain for each three to five pounds of milk produced per day. This is a simple rule easily applied and one that works out very satisfactorily in practice. It does not, however, take into consideration the quality of the milk. Cows yielding high testing milk should receive more nutrients than cows yielding low testing milk.

2. Feed one pound of grain per day for each pound of butterfat produced per week. This rule takes into consideration the yield and the quality of the milk but is not as easily applied as Rule No. 1.

3. Feed as much as the cow will permit for at the attractive prices of feeds and products, increasing the allowance gradually until she fails to respond by an increase in production which will cover the increase in cost.

### Stronger Stand

(Continued from page 1)

tions in the event of conflict over Czechoslovakia.

Observers saw indications Britain did not want to repeat the tragic decision of 1914 when the Kaiser believed Britain would stay neutral long enough for Germany to defeat France and Russia.

The purpose of a warning now would be to let Germany know clearly what to expect before any military steps were taken.

The full cabinet will meet today, a few hours before Chancellor Hitler is expected to speak on Czechoslovakia at Nuremberg.

### OPERATIONS

(Continued from page 1)

able conditions that such deep wells were sunk.

He had a "good deal of confidence" in finding oil here, Mr. MacKay declared last night. The geological formation was sufficiently promising to warrant the expenditure of large sums of money to sink a deep hole. If oil were found in the Province it would quite probably be in the deeper levels of the red-sandstone rocks would have to be penetrated before oil would be found.

Mr. MacKay announced last night he would probably visit his oil fields in the Mackay-Pictou over the week end, returning to this Province for a few days next week before leaving for the United States. He was born at Earltown, a few miles from Pictou, he said.

### Newsy Notes

(Continued from page 10.)

In the little conservatory attached to the dwelling, were some of the finest Begonias I have seen in my fortune to see. One had blooms of the purest white, as large as the largest Dahlia. Another of small type had a profusion of buttercup-yellow flowers.

It was now time to go for we had a long drive before us, and we had taken up a good part of our hostess's afternoon. Indeed the wonder is that she accomplishes so much, when so many visitors call. But we have the pleasant reflection that we were invited back when the green leaves came again.

#### "Makers of Christianity."

There are some books that we are satisfied to read once; other we read again and again, deriving fresh pleasure, and seeing new beauty every time we do so. Such a book is Dr. John T. McNeill's "Makers of Christianity from Alfred the Great to Schleiermacher," which I have just read for the fourth or fifth time. Dr. McNeill is a son of the Island, who has achieved distinction in his scientific world, and holds the position of Professor of History of European Christianity, at the University of Chicago. This honor has come from another nation, the learned Doctor never-forgets the "rock whence he was hewn" and visits his native Island every year.

Why do I like his book? Well, apart from the attraction of the stirring yet analytic biographies, some thirty in all, I admire the felicitous expressions and pithy sayings. This is a book that I can, with truth recommend to all who would study the progress of the Christian religion.

#### DOG GOOD SHARKER

QUEENSLAND, Australia—A four-foot whip-tailed shark was caught in an unusual manner here when a cattle dog jumped from a pier, seized it and swam with it to a landing where fishermen killed it.

guides to the amount of concentrates that should be fed:

1. Feed one pound of grain for each three to five pounds of milk produced per day. This is a simple rule easily applied and one that works out very satisfactorily in practice. It does not, however, take into consideration the quality of the milk. Cows yielding high testing milk should receive more nutrients than cows yielding low testing milk.

2. Feed one pound of grain per day for each pound of butterfat produced per week. This rule takes into consideration the yield and the quality of the milk but is not as easily applied as Rule No. 1.
