THE MARKETS

(Canadian Press)

MONTREAL, Que., July 8—Cattle receipts, 698. Cattle trading was brisk at prices 25 cents or more higher. Steers sold from \$9.50 to \$11.75, with a couple of car lots weighing around 1,150 to 1,200 pounds at \$12. Top cows sold up to \$9, with the bulk of the plain to medium kinds between \$7 and \$8. Handy weight, fat heifers sold up to \$10. The few bulls offered sold about steady.

Quotations: Butcher steers, good, \$11 to \$12; medium, \$10.50 to \$11; common, \$9 to \$10.25; butcher heifers good, \$9.50 to \$10; medium \$8 to \$9.25; common, \$5.50 to \$8; butcher cows good, \$8.50 to \$9; medium, \$6 to \$8; canners, \$3.50 to \$4; cutters \$4.50 to \$5; butcher bulls, common, \$5.50 to \$8.

Calf receipts, 2,370. The calf market was stronger and there was a good demand. The best lot sold for \$11.50 and \$12, with a few picked out at \$13. Trade on common calves, grassers and drinkers, were fairly active at \$7.25 to \$8.50 with an odd sale at \$7. Medium quality calves were sold for \$9 up.

Quotations: Good veal \$10.50 to \$12; medium \$9 to \$10.25; common \$7 to \$8.50.

Sheep receipts 838. Lambs were in very good demand and were mostly all sold for \$15 per cwt. On one market where less than 100 lambs were offered, sales were made at \$15. Sheep were from \$4 to \$7.

Quotations: Ewes \$4 to \$7; lambs, good, \$15 to \$16.

Three performing troupes from New York, and four days horse racing. Write to your friends abroad and plan to entertain them that week. Send for prize list. J. W. Boulter, Secretary, Charlottetown, P. E. Island. 6459-7-8-31

DOCTOR TO PRINCE—Following a drive around Stanley Park Thursday afternoon, His Royal Highness Prince Henry announced through his enquiry that he would consider starting for Eastern Canada next Wednesday night. Prince Henry was the guest at a private tea following the drive. He was accompanied by Capt. Howard Kerr, Newton J. Kerr, of the Canadian Pacific Railway Lands Department, and General Paget. He left the hotel by the basement and entered a motor car at the Granville Street entrance. Dr. W. H. Sutherland, personal physician to the prince stated that the fracture has almost completely healed, indicating the splendid health of the patient, who was injured at polo nearly three weeks ago.—Vancouver Star, June 21st. (Dr. Sutherland referred to is a native of Sea View, Prince Edward Island, and a nephew of Mrs. W. T. Huggan, of Charlottetown.)

AT ROTARY—The regular weekly luncheon of the Rotary Club was held yesterday in the Oddfellows Hall. This was the first meeting to be presided over by the new President, J. A. MacMillan, who gave a brief address in which he referred to his fellow officers and their duties. The new Secretary, Percy W. Turner, spoke on attendance which he termed the lifeblood of the Rotary body. Mr. B. Roy Holman, Song Leader, gave an interesting address on Club singing. J. M. Murley, chairman of the programme committee, also outlined the work of that committee for the year. This was stork day at Rotary and the happy father, Roy Quigley, was presented with the Club's emblematic silver mug. Rotarian Lightizer made the presentation in felicitous terms, and the recipient made a fitting reply. Rotarian James MacKee, whose marriage took place recently, was also honored by the Club and presented with a silver vegetable dish by Judge H. L. Palmer, who wished the blushing benedict Godspeed in his post-graduate course. The musical program comprised a piano solo by Mr. Fred Harris, who was most enthusiastically encored. The guests were Rotarian Judson Clark of Pasadena, California; Messrs. J. H. Williams, N. E. Legendre of the Maritime Electric Company; L. D. Murray, Fred Morris and Roy Collins.

NEWSY FARM NOTES

By Agricola

DERRIS POWDER

Dr. Lionel Stevenson, Provincial Zoologist for Ontario, recommends the use of Derris powder to destroy warbles on the cattle's backs. Dr. Stevenson is the author of several valuable bulletins on the parasites of sheep and swine (which may be had at the Department of Agriculture gratis) and those who heard him during Farmer's Week, in the Prince of Wales College, will be inclined to give all credence to his utterances.

I had never heard of Derris powder, so looked it up. It is the ground seeds of a species of *Dequella*, a climbing shrub related to the bean family, which is found in Guiana, the East Indies and other places. American drug houses list it, and it is now being put up in quarter pound tins by veterinary supply stores. The powder is applied early in the spring to kill the grubs in the lumps on the backs of cattle. If allowed to develop, these grubs escape by a large opening which materially lowers the value of the hide, besides causing the animal much unnecessary suffering. The escaping grubs metamorphose into the warble fly which propagates and perpetuates the trouble.

Seeing that there is a stage in the life of the warble fly when it is completely at man's mercy, it is evident that only rank carelessness is responsible for the survival of the pest.

good judgement in the stage of cutting, the method of handling, and time of storing; all factors, to a large extent, under the control of the farmer.

Timothy is cut immediately after the "second bloom" which occurs after the full bloom season has passed. The curing of timothy is not a difficult problem; during good weather it may be cured in the windrow and drawn in the day following cutting. Some successful growers cure timothy in cocks.

Red clover is cut just after bloom, when a few heads have turned brown. Recent experimental work has shown that slightly better yields have been secured when cut in full bloom, although the quality may be slightly reduced. If the swath is left exposed to the sun the leaves dry faster than the stalks, and drop off in handling. By raking into windrow when the leaves are well wilted they will be retained, and will be sufficiently alive to draw moisture from the stalks. Heavy crops of clover must usually be tedded so that the wilting is more uniform.

When about half dry, the hay should be cured in tall narrow cocks. By keeping the centre high the rain will shed more effectively. A few hours before drawing in the cocks should be partially opened out to allow the escape of any moisture that may be inside, taking care to shatter the leaves as little as possible. Twenty to twenty five pounds of salt should be incorporated with every ton of hay.

NO WONDER

A worried looking farmer drove in to town, tied his team, and headed for the family doctor's office. Without preamble he began:

"Doc, the first time you're out our way I wish you'd stop in and see my wife."

"Is she sick?" asked the doctor.

"Not exactly."

"What's the trouble then?"

"Well, this morning she got up at the regular time, about four o'clock, milked the cows, got breakfast for the hands, done her housework, churned, and long about ten o'clock she told me she felt a little tired. I expect she needs a tonic or something."

HAY

"Make hay while the sun shines," for no other crop is so dependent on weather conditions. The ability to foretell these conditions, and experience of the proper measures to meet them are two of the points essential to success in hay-making.

Rain is a source of great loss in the nutrients of hay, because it leaches out the protein, fat, carbohydrates and minerals, and increases the percentage of indigestible fibre. Washing dry clover in water resulted in the loss of half of the protein. The bleaching of hay by too much exposure to sunlight while not so injurious, usually lowers the price on the city markets.

Hay should be fragrant, palatable, of a natural green color, and of high feeding value. This means care and

Root Vegetables Act

VEGETABLE GRADES AND REGULATIONS. Effective from date of publication in the Canada Gazette of June 29, 1929. (Continued.)

ONION GRADES

2. The following shall be the grades for the onions intended for sale:—
(A) CANADA NO. 1 shall include only firm, well shaped, well cured onions of similar varietal characteristics, free from doubles and scallions, not sprouted, nor peeled, nor with root growth, free from seed stems, and from damage caused by freezing injury, disease, insects, mechanical or other means, and practically free from dirt, leaves or other foreign matter. In this grade the size of the onions shall be not less than 1 1/2 inches in diameter.

(B) CANADA NO. 2 shall include only firm, well cured onions of similar varietal characteristics, free from doubles and scallions, not sprouted, nor peeled, nor with root growth, free from seed stems, and from damage caused by freezing injury, disease, insects, mechanical or other means, and practically free from dirt, leaves or other foreign matter. In this grade the size of the onions shall be not less than 1 1/4 inches, nor more than 1 3/4 inches in diameter.

In order to allow for variations incident to commercial grading and handling in each of the above grades 5% by weight of any lot may be under the prescribed minimum size, 2% by weight may be affected with decay, and an additional 5% by weight of any lot may be under the remaining requirements of the grade. For Canada No. 2 grade, 10% by weight of any lot may be above the prescribed maximum size.

(C) CANADA NO. 3 shall include only firm, well cured onions of similar varietal characteristics, not sprouted, nor with root growth, and without damage caused by freezing injury, disease, insects or other means, and practically free from mechanical injury, dirt, leaves or other matter. In this grade the size of the onions shall be below 1 1/4 inches in diameter.

In order to allow for variations incident to commercial grading and handling 5% by weight of any lot may be under the requirements of this grade, but not more than 2% by weight of the entire lot may be af-

ected with decay. An additional 5% by weight may be above the maximum size.

(D) UNGRADED shall consist of onions which do not meet the requirements of the foregoing grades. Definition. (2) For the purpose of this Section:—

(A) "Well shaped" means having the shape characteristic of the variety, but slightly off type.

(B) "Well cured" means an onion which has the neck well dried out, and is free from damage caused by weather conditions.

(C) "Doubles" means an onion which has the outer skins broken exposing two centres of growth.

(D) "Scallion" means an onion which has a thick neck.

(E) "Practically free" means the appearance shall not be injured to an extent readily apparent on examination.

(F) "Diameter" means the greatest dimension at right angles to a straight line from stem to root.

(G) "Peeled" means an onion which has lost its outer skins to such a degree that the edible flesh of the onion is exposed.

TURNIP OR RUTABAGA GRADES

3. The following shall be the grades for Table Turnips or Rutabagas intended for sale:—

(A) CANADA NO. 1 small shall include only turnips of similar varietal characteristics which are clean, firm, bright, smooth, sound, well shaped properly trimmed, and which are not pithy and practically free from freezing injury, water core, soft rot, blight, dry rot, grey mould, black spot or other disease and free from damage caused by worm ring, wire worm, growth cracks, cuts, insects, or mechanical or other means. The size shall be from 2 to 4 inches in diameter.

(B) CANADA NO. 1 medium shall include only turnips of similar varietal characteristics, which are clean, firm, bright, smooth, sound, well shaped, properly trimmed, and which are not pithy and practically free from freezing injury, water core, soft rot, blight, dry rot, grey mould, black spot or other disease and free from damage caused by worm ring, wire worm, growth cracks, cuts, insects or mechanical or other means. The size shall be from 3 1/2 to 5 1/2 inches in diameter.

(C) CANADA NO. 1 large shall in-

clude only turnips of similar varietal characteristics, which are clean, firm, bright, smooth, sound, well shaped, properly trimmed, and which are not pithy and practically free from freezing injury, water core, soft rot, blight, dry rot, grey mould, black spot or other disease and free from damage caused by worm ring, wire worm, growth cracks, cuts, insects, or mechanical or other means. The size shall be from 2 to 4 inches in diameter.

(B) CANADA NO. 1 medium shall include only turnips of similar varietal characteristics, which are clean, firm, bright, smooth, sound, well shaped, properly trimmed, and which are not pithy and practically free from freezing injury, water core, soft rot, blight, dry rot, grey mould, black spot or other disease and free from damage caused by worm ring, wire worm, growth cracks, cuts, insects or mechanical or other means. The size shall be from 3 1/2 to 5 1/2 inches in diameter.

(F) "Practically free" or "Free from damage" means that the appearance shall not be injured to an extent readily apparent upon examination of the lot, and that any damage from the causes mentioned can be removed in the ordinary process of paring without appreciable increase in waste over that which would occur if the turnip were perfect. (To Be Continued.)

KING DECORATES CZARIST MINISTER

WINDSOR, England, July 8.—King George, it transpired to-day, received at Windsor castle his exco-lency Pierre L. Bark, last financial minister of Russia under the reign of the czars. The king thanked L. Bark for all he had done for King press Marie and her daughters, and conferred upon him the honor of Grand Cross of the Royal Victoria Order.
