...a Body in Health

...nd Disease.

...he mention of sulphur will recall to ...oy of us the early days when our mothl ...and grandmothers gave us our daily ...e of sulphur and molasses every spring ...fall.

...was the universal spring and fall ...ood purifier," tonic and cure-all, and ...d you, this old-fashioned remedy was ...without merit.

...he idea was good, but the remedy was ...le and unpalatable, and a large quan...ty had to be taken to get any effect.

Nowadays we get all the beneficial effects of sulphur in a palatable, concentrated form, so that a single grain is far more effective than a tablespoonful of the crude sulphur.

In recent years, research and experiment have proven that the best sulphur for medicinal use is that obtained from Calcium (Calcium Sulphide) and sold in drug stores under the name of Stuart's Calcium Wafers. They are small chocolate coated pellets and contain the active medicinal principle or sulphur in a highly concentrated, effective form.

Few people are aware of the value of this form of sulphur in restoring and maintaining bodily vigor and health; sulphur acts directly on the liver and excretory organs and purifies and enriches the blood by the prompt elimination of waste material.

Our grandmothers knew this when they dosed us with sulphur and molasses every spring and fall, but the crudity and impurity of ordinary flowers of sulphur were often worse than the disease, and cannot compare with the modern concentrated preparations of sulphur, of which Stuart's Calcium Wafers is undoubtedly the best and most widely used.

They are the natural antidote for liver and kidney troubles and cure constipation and purify the blood in a way that often surprises patient and physician alike.

Dr. R. M. Wilkins while experimenting with sulphur remedies soon found that the sulphur from Calcium was superior to any other form. He says: 'For liver, kidney and blood troubles, especially when resulting from constipation or malaria, I have been surprised at the results obtained from Stuart's Calcium Wafers. In patients suffering from boils and pimples and even deep-seated carbuncles, I have repeatedly seen them dry up and disappear in four or five days, leaving the skin clear and smooth. Although Stuart's Calcium Wafers is a proprietary article, and sold by druggists, and for that reason tabooed by many physicians, yet I know of nothing so safe and reliable for constipation, liver and kidney troubles and especially in all forms of skin disease as this remedy."

At any rate people who are tired of pills, cathartics and so-called blood "purifiers," will find in Stuart's Calcium Wafers, a far safer, more palatable and effective preparation.

CANADA HAS 6,000 MILES OF WIRES

Each Year Sees Increase in Dominion's Telegraph and Cable System. Government Lines Are Built into Districts Were Private Companies Find it Unprofitable To Penetrate.

OTTAWA, Dec. 29.—The Canadian people today are the owners of more than sixty thousands miles of land telegraphs and sea cables built and operated with their own money.

For years much talk has been heard about national ownership of telegraphic lines, and Sir William Mulock, the postmaster general, is understood to have been investigating the conditions under which the properties of the companies now doing business in Canada can be acquired and operated by the government. Since Sir William began his inquiry the value of the companies' plants, holdings and franchises has gone up enormously.

If the progress of Canada continues at its present rate the difference between the price at which the lines could have been bought a few years after Sir William became postmaster general in the Laurier administration and at which they may be had, say, ten years hence, is likely to be so great as to handicap any minister who attempts a nationalization scheme.

In the meantime the government has been adding steadily in the mileage of its own lines, and in the Northwest especially is sending out branches in every direction in newly settled districts where private telegraph companies have not found it profitable to build. In this way the government is doing splendid work for immigration and settlement.

The number of miles of government lines constructed up to the close of last year was 6,241, and the present year will see a total mileage of 6,581 completed and equipped with 299 offices, forty more than last year.

The government system may be described in a general way as consisting of three blocks. One connects Quebec with a station at the Atlantic end, on the north shore of the St Lawrence in one direction, eighty miles beyond the Canadian boundary in Newfoundland, Labrador, at Chateau Bay opposite Belle Isle, in the Straits of Belle Isle, with a cable proceeding southwardly by way of the islands to Cape Breton, and branches in Nova Scotia and New Brunswick.

Another is within the boundaries of the great territories of Assiniboia and Saskatchewan.

The third extends from the southern section of British Columbia north beyond Dawson City, in the Yukon, with a branch from the main line to Port Simpson, on the Pacific coast below the Alaskan strip of the United States, and a spur to Aberdeen, on the coast below Port Simpson.

The latter place is the probable terminus of the National Transcontinental Railway the western section of which is to be constructed by the Grand Trunk Pacific Railway, and the Eastern by the Canadian government. The government line on the north shore of the St, Lawrence, between Murray Bay, Quebec and Chateau Bay, is a thousand miles long, with about nine hundred miles more distributed in the province of Quebec, in and around the Magdalen Islands and Anticosti Island, and connecting them with the mainland. In the maritime provinces the government has constructed about five hundred miles of telegraph lines.

The wireless telegraph system has been used by the government in connection with its land lines at various points in the Gulf of St. Lawrence and on the Atlantic coast. At Chateau Bay, the terminus of the north shore line, in Labrador (Newfoundland territory), eighty-four miles from the point where Canadian jurisdiction ends, there is a Marconi station by means of which communication is maintained with Belle Isle.

The government cable, twenty-two miles, between the bay and island, was damaged by icebergs in June, and the wireless system which had been installed was put in requisition and found to work satisfactorily.

The whole of the land and cable telegraph lines enumerated have been constructed by the Public Works Department of the government, but in connection with the wireless system the marine and fisheries department has assisted in the establishment of five Marconi stations. These are at Cape Race, Newfoundland; Belle Isle, Port Arthur, Labrador; Fame Point and Heath Point, Anticosti, and they have handled a large number of messages to and from ocean steamships during the season of open navigation.

JAPS USING WAR BALLOON OVER PORT ARTHUR.

The above is one of the most remarkable war photographs ever taken. With marvelous accuracy the camera has been swung just upon the balloon while in real action. The man in the air points out the direction and distance for the artillery below the hills.
