City Building Lots, City Houses, Out of Town Houses, Woods and Stores

ALSO

Farms for Sale in all Parts of the Island

TO LET

Several desirable Furnished Rooms, with or without board, some with housekeeping privileges.

STOCK QUOTATIONS

Stock Markets At A Glance

MONTREAL June 2 — (CP) — A group of selected industrials made headway today on the Stock Exchange and Curb Market but papers, leaders in a four-day upswing, took a breather. Changes were fractional except for spots here and there.

LONDON, June 2—(CP) — The Stock Market closed steady today after a quiet session in which industrials were selectively higher and home rails and oils uncertain. Internationals and British funds were firm.

CHICAGO, June 2—(AP) — All wheat futures were lower in quiet trading today with the deferred contracts showing the greatest declines.

Though the volume of selling was not heavy, rye prices were well below the previous close.

WINNIPEG, June 2 — (CP) — United Kingdom purchased 600,000 bushels of Nos. 1 and 2 northern wheat today on the Winnipeg Grain Exchange. Sales to Eire amounted to 100,000 bushels of Nos. 1 and 3 northern.

NEW YORK, June 2—(AP)—Selected stocks, including specialities, amusements and motors continued to populate the "new high" division in today's market although further profit cashing stalled numerous leaders.

The Associated Press 60-stock average was off .1 of a point at 53.2.

TORONTO, June 2—(CP)—The golds and western oils posted small net losses today on the Toronto Stock Exchange. The Base Metal issues finished about even with Thursday's close.

Three or four junior gold stocks provided the features. Bear exploration traded in volume of 161,900 shares and advanced 14 cents to 1.39. The day's high was 1.43. Harricana, yesterday's new listing, traded 80,700 shares and closed unchanged at 37. Coin Lake moved in Volume of 74,800 shares and weakened ¾ to close at 34.

IN THE PROBATE COURT

the 12th day of May A. D. 1944.

In Re Estate of William Gregory late of Charlottetown Royalty in Queens County in the said Province, Milk Dealer, deceased, testate.

To the Sheriff of the County of Queens County or any Constable or literate person within said County.

GREETING:

WHEREAS upon reading the petition on file of Herbert Love of Charlottetown Royalty aforesaid, Farmer, the sole Executor of the above named estate praying that a citation may be issued for the purpose hereinafter set forth: You are therefore hereby required to cite all persons interested in the said Estate to be and appear before the Judge present at a Probate Court to be held in the Court House in Charlottetown in said County, in the said Province, on Wednesday the fourteenth day of June next coming, at the hour of eleven o'clock forenoon of the same day to shew cause if any they can why the Accounts of the said Estate should not be passed and the Estate closed as prayed for in said petition and on motion of Donald McKinnon, Esq., Proctor for said Petitioner.

And it is hereby ordered that a true copy hereof be forthwith published in some newspaper published in Charlottetown aforesaid once in each week for at least four consecutive weeks from the date hereof and that a true copy hereof be forthwith posted in the following public places respectively, namely in the hall of the Court House in Charlottetown aforesaid, at or near the Royal Bank of Canada and at or near the Bank of Nova Scotia both in Charlottetown aforesaid, so that all persons interested in the said Estate as aforesaid may have due notice thereof.

WITNESS His Honour Harold Leonard Palmer, Judge of the said Probate Court at Charlottetown aforesaid, the day and year first above written.

By the Court.
(Sgd.) E. MARGARET PALMER,
Registrar.

TIMELY NOTES ON TOPICS CONNECTED WITH Silver Fox Farming

Scientists connected with the University of Wisconsin have been interesting themselves in silver foxes for several years. One reason for the great amount of attention devoted to this branch of fur farming is that Wisconsin has probably as many foxes as the rest of the United States combined. It is in that great western state that the Fromm Brothers have their ranches, the largest being at Thiensville. In the American National Fur and Market Journal for May the results of a close study of silver foxes and their color phases, by Dr. Leon J. Cole and Richard M. Shackleford of the Department of Genetics, University of Wisconsin appears as part one. All of us are now deeply interested in these color phases, particularly in the LaForest and Norwegian platinums, and for that reason we are publishing part of the article.

"The present extensive fox fur industry is based on color phases of the common red fox which ranges over the northern parts of Europe, Asia and North America. Ranch raising began with the black phase, which occurs with fair frequency in the wild. In its early stages the industry centred largely on Prince Edward Island.

The Black Fox, as it was called, varied in the amount of 'silvering' it carried, this silvering being due to banding with white on the guard hairs. As fashion came to favor the lighter shades, the amount of silvering was increased by selection from 'quarter,' 'half,' and 'three-quarter,' up to 'full silver,' in which the banding of the hairs extends practically over the whole body. These grades are all referred to as silver-blacks or silvers.

Silver foxes, like the reds from which they arose, commonly have little or no pure white in the pelt, except for the tail tip. By pure white is meant areas having both guard hairs and under fur completely white. Such areas are characteristic of both the color types now to be discussed.

PLATINUM SILVERS — The black fox long had such a hold on the trade that other color phases were neglected. When they did occur, they were usually disposed of summarily as indicating lack of purity in the standard stock. This attitude was changed very abruptly, however, as a result of a shipment of pelts from Norway to New York in 1930. They represented a new type which the Norwegians call platina. They are now officially known in this country as platinum silvers but are commonly referred to simply as platinums. In 1936 Tuff, in a general discussion of the inheritance of color phases in foxes, described this new type being raised in Norway, which he referred to as 'the platinum character in the silver fox, and the following year Mohr and Tuff presented a fuller account, together with a discussion of the inheritance of the character.

Since the appearance of the Norwegian platina silver is rather fully described and illustrated in the excellent report of these authors, a more general description will be sufficient for present purposes. The general color of the platinum silver is lighter than that of the silver, this being due not only to the fact that there is a smaller pigmented area, but also that the black appears dilute, with a grayish or bluish tone. The actual shade varies greatly in different individuals.

Extremely light silvers often closely resemble platinum silvers, but any one familiar with them can distinguish the two at all ages by the lighter tone of the black. This is particularly evident on the ears, which are deep black in the silver, whereas they may be described as a medium gray or taupe in the platinum silver. The young pups are even easier to distinguish, as the young platinum silvers are dull bluish while the silver pups are at first definitely black, only later acquiring the silvering which makes them appear lighter.

The most characteristic thing about platinum silver is that it is always accompanied by a considerable amount of white spotting. Mohr and Tuff have well described it as follows: 'White snout, a blaze along the nose and forehead joining with a white collar around the neck. The breast and a broad stripe on the belly are white, and the same is true of the legs and distal part of the tail. The size of the markings is somewhat variable, particularly on the legs, and the white collar may be lacking in dark individuals.' As they add, in the white markings on the nose and legs, there are, as a rule, small black spots, but these are not of the deep black color that they are when they occur in white-marked silvers. As a matter of fact, the amount of white on the face may in some cases be so small that the classification might be doubtful as an index of type if it were not for the other characteristics of the platinum silver.

The Norwegian platinum silvers are, for the most part at least, descended from a single male known as 'Mons,' which appeared in 1933 in a litter of six pups from a long line of silver ancestors originally imported from Canada. Brager-Larsen (1940) says it was considered a freak silver fox, which of course it really was. In the following year, 1934, one of the silver grandmothers of 'Mons' gave birth by a different male to a litter of six pups, one of which appeared to be a typical platinum silver. This was a female, known as 'Bergetta,' and, while it is not stated definitely, it is presumed that her descendants have added to the Norwegian platinum silver stock.

There is relatively little inbreeding evident in five generations back of Mons, but this would not be necessary to bring out a dominant color phase such as platinum silver. Two or three other somewhat similar and independently occurring color phases are mentioned. Little is known of these but examination by Mohn and Tuff of one known as 'TK' convinced them that it was distinct from the Mons type. It is possible this may have been of the white-face silver type discussed later in this paper.

Mohr and Tuff point out that the breeding records they had clearly indicate that platinum silver is an ordinary dominant, not sex-linked, and that the true-breeding homozygous type was unknown. Matings of platinum silvers to silvers gave approximately equal numbers of platinum silver and silver offspring, as would be expected. The few available matings of platinum silver by platinum silver, however, gave more nearly two platinum silvers to one silver, rather than the normally expected three to one. They suggested, therefore, that the homozygous platinum silver might be lethal, a suggestion supported by our own findings.

According to Brager-Larsen, Mr. Kjaer, who had bought 'Mons', in 1936 marketed the first platinum silver pelt at the Oslo sales for $200. The following year nine platinum silver pelts were offered and bid in for a Buenos Aires retailer, bringing as high as $500 for a single pelt and an average of $300. This favorable reception led to the formation of the Norwegian Platinum (Silver) Fox Breeders' Association and a boom in prices of platinum silvers and for matings of platinum silvers to silvers ensued. It is stated that the usual price for matings was better than $1,000.

The craze for platinum silvers continued and it is reported that when, on Jan. 22, 1940, a large part of the 1939 output from Norway was sold in New York, one skin brought a world record price of $11,000! The publicity resulting from this sale naturally concentrated the attention of American breeders on the new color phase and changed their attitude towards new colors in general. The Norwegian breeders placed an embargo on the exportation of platinum silved breeding stock, but it was soon apparent that there were already in North America at least three independent sources of color phases which were very similar to, if not identical with, each other and the Norwegian platinum silver.

It is true that any one thoroughly familiar with them can often tell to which strain a particular animal belongs, but this is doubtless because of different accompanying minor factors which serve somewhat to characterize the different strains. For present purposes the description of the Norwegian platinum silver already given will suffice equally well for the American. Minor differences will be mentioned in connection with the strains, which have come to be generally known from the ranch on which each was developed and publicized and not necessarily by that on which the color phase first occurred.

The following is from the May Bulletin of the P. E. I. Fur Pool Ltd., and speaks for itself:

At the January auctions large purchases were made for export to South American countries but fearing that these furs might get into the hands of German traders, Federal officials deliberately delayed the furnishing of export permits. These operators then quit the Canadian markets in disgust and now secure their silver fox requirements from Sweden. Thus an official blunder has forced our best customers for silver fox furs to purchase in a market that is undoubtedly controlled by German interests. The judgment and wisdom of some Canadian officials seems to be at an all-time low but despite the handicaps and restrictions imposed on it by our present bureaucracy, the silver fox industry will emerge and continue.

A. E. WRIGHT

WINSTON McQUILLIN

At the annual meeting of Cockfield, Brown & Company, Limited, advertising agents A. E. Wright, of Montreal (left), and Winston McQuillin, of Toronto (right), were elected to the board of directors. Mr. Wright became associated with the agency at Toronto in 1923 as an account executive; since 1934 he has been attached to the Montreal office in a similar capacity. Mr. McQuillin joined the firm at Winnipeg in 1930; since 1936 he has directed the agency's radio department from Toronto.

AUCTION SALE

AT GRAND VIEW WEDNESDAY, JUNE 7th AT 2 P. M.

I am instructed by the executrix and the heirs of the late Dr. Martin Martin to sell by public auction his property, household effects and machinery. One farm of 50 acres of land with house and outbuildings. The other farm with 50 acres with barn only. Furniture: Piano and stool, large mantel mirror, 1 Wilton rug 6½ x 9.1; 1 sofa; 2 arm chairs, 3 small chairs; marble top table; 1 fern stand; 1 hall rack; dining room table and 6 chairs; 1 writing desk; 1 buffet; double couch and mattress; 3 Congoleum squares; 5 bureaus; 3 commodes; 3 wooden beds and springs; 2 white metal beds and springs; 1 brown metal bed and spring; 2 mattresses; 1 base burner; 1 four-burner oil stove; 1 kitchen range (Enterprise); kitchen table; rocking chairs; washing machine; spinning wheel; dishes; pots; pans; screen windows and doors; storm doors; coal in cellar. Machinery: Single plow; horse hoe; roller; hay mower; hay rack; spike harrows; 5 tons hay and several other articles.

Terms of movables: Cash.

W. M. BEATON, Auctioneer.

LEAKING ROOFS

A little leak you don't see can grow big and expensive. Little or big stop it with U. B. Liquid Asbestos Roof Coating Cement and Asbestos Plastic Cement.

Last year United Builders Asbestos Roof Cement resurfaced more buildings on the Island than all other Roof Coating Material combined.

This goes to prove that the best quality Waterproof Oils and Canadian Long-Asbestos Fiber and dryers are the ingredients used in this material—backed up by people that are specialists in the Roof Building business.

United Builders have been selling only one brand for a generation and that the best that can be manufactured.

Apply Cold—No Heating, sweep the surface clean, patch holes and cracks, then apply with our special roof brush as directed. It sets with a tough leather-like skin with only 2% evaporation, 98 out of every 100 gallons gives you lasting protection.

In Nova Scotia and New Brunswick I find building owners realise the need of Brush Coating their built-up roofs every five years, this lengthens the life of the roofs years over the guarantee, otherwise when the guarantee expires their roofs are in a very dried-out and spungy condition, in fact ready for a new roof.

You have tried other brands, this material is proving satisfactory in this climate and is one of the oldest type of Roof Coating ever used in the Maritimes.

Be sure the U. B. label is on your next purchase and you will have the most scientific Roof Preparation of its kind devoted exclusively to making your old roof last ten years longer.

All orders shipped out promptly. No waiting. I am at your service for any information and cooperation in estimating the cost of your job.
