

Wise-Cracking Maisie Is Back...

Prince Edward

TWO DAYS ONLY: TODAY & SATURDAY
'MAISIE' IS THE MISSUS AS FRANCHOT JUDGES BATHING BEAUTIES!

Where "Fast and Loose" ended... this fast and furious fun sequel begins! It's gay! It's grand... as they rowdily solve the "Bathing Beauty Murders" between cocktails, cuffs, and kisses!

MAISIE BACK! FRANCHOT ANN TONE-SOTHERN FAST and FURIOUS RUTH HUSSEY LEE BOWMAN

Gene Autry Opened Yesterday In "Rancho Grande" At Capitol For Three Days

"Rancho Grande" is a singing-entertainment... Gene Autry plays the handsome young foreman of the Rancho Grande who has been named guardian of the madcap lodge here, Kay Dodge, her brother and boom companion, Tom, and their kid sister, Patricia.

Wise-Cracking "Maisie" Is Back Today At Prince Edward

One of the season's brightest pieces of entertainment is "Fast and Loose" which opens today at the Prince Edward Theatre. Franchot Tone and Ann Sothern, fresh from their success in "Maisie," are the stars.

Smith, Taunton Mass; and Mrs. Minnie Murray, Heniker, N. H. Her Murays were: Messrs. W. J. Mutch, M. McLeod, J. Morley, L. Haydon, R. Docherty, and H. Richards.

CONFEDERATION LIFE INSUR-ANCE L-9789-7-21-311

CONGRATULATIONS.-Mr. W. O. Fyfe, Hillsboro Street received the congratulations of his friends yesterday on the occasion of his 79th birthday.

SHOWER AND ADDRESS.-On Wednesday, May 1st, the home of Mr. and Mrs. Eton Raynor, Mr. Herbert, was filled to capacity, when the friends and neighbours of Miss Marion Raynor gathered to honor her on her approaching mar-riage. An address was read by Mr. Spur Jenkins, during which Mrs. Eileen Ings presented the gift, a cabinet of flat-silver. Although taken by surprise Miss Raynor in a few well chosen words thanked her friends for their kindness. The remainder of the evening was spent in social intercourse and instru-mental music. After refreshments were served, all departed for their homes wishing Marion every hap-piness for the future.

PRESENTATIONS.-On April 26th, neighbors and friends gathered at the home of Mrs. Jane Ballem, Southport, to honour two popular young men, Austin MacCallum and Don MacRae who have offered their services to the King and country. Mr. M. W. Wood gave the address and presented each with a well filled purse. The boys thanked their friends and all joined in singing "For They Are Jolly Good Fellows." The evening was pleasantly spent with music and games, after which a delicious luncheon was served by the hostess. Singing of the National Anthem brought the evening to a close.

MONTAGUE
A farewell party and dance was held in the lower Montague hall on Monday evening for Mr. Wilson Martin who left on Tuesday morning for Moncton, N. B., where he has joined the Military Police. Mr. Martin will be missed by the Montague Hockey Club where he was a valued member for the past few seasons.

Messrs. Stewart and Beck's new store is progressing favourably un-der the capable direction of Mr. Samuel Martin, and staff.

Mr. Reel Tinney of the P. E. I. Fur Pool was a business visitor to Montague, Tuesday.

Miss Coleen MacLean underwent an operation for appendicitis in the King's County Hospital. M.

IN MEMORIAM

MRS. J. WALLACE SHAW
The death occurred at her res-idence, 13 Passmore Street, Char-lottetown, Wednesday, of Mrs. Shaw, aged 74, beloved wife of Mr. J. Wallace Shaw, and mother of Mr. J. Wallace Shaw, and Mrs. J. Wallace Shaw, who had been ill for some time, was formerly Miss Florence Shaw, daughter of the late Mr. and Mrs. John Shaw of Brackley Point, but has been a resident of Charlottetown for a number of years.

She was a woman of splendid character and her death will be learned with regret by friends both within and beyond this city.

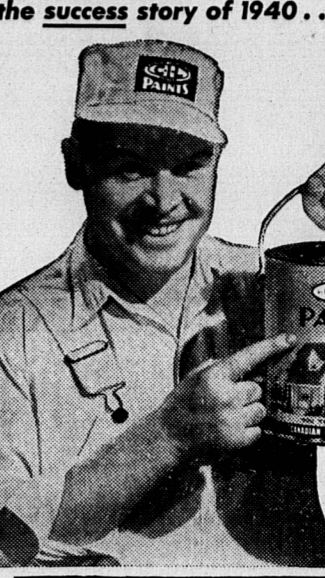

Besides her sorrowing husband there are left to mourn, one sis-ter, Nettie, widow of the late Dr. Charles Mathieson, of Harrington, and two brothers, Albert Shaw, of Brackley Point Road, and Hon. D. Edgar Shaw, Summerside, Judge of the County Court of Prince County.

Mrs. Shaw will be laid to rest this afternoon in the People's cemetery, following a service start-ling at 2 o'clock at the MacLean Funeral Home, the funeral leaving at 2.30.

New Growth For Bald Plains

Wherever you see smart homes this year, those finished with gleaming "Trutone" stand right out. For this glowing white paint has proved that it not only STARTS whiter but also STAYS whiter - despite winter, rain, dust and dirt! And because of its special C-I-L formula, "Trutone" White actually CLEANS ITSELF. What's more, the new "Trutone" White House Paint costs you no more than ordinary paints. Indeed it's actually more economical, because like all C-I-L's scientifically made products, it spreads farther... protects better and longer!

This year make your home the trimmest, the whitest in the neighbourhood. Specify "Trutone" White to your Master Painter. Make sure you get it!

number of plants grown from treated seeds, one was obtained with the double-chromosome number which was fertile and true-breeding in consequence. The deadly-poisonous drug gave life!

From this initial plant 6,000 seeds have been secured in the course of time. These seeds are large, appear to be capable of being sown deep-ly, have already produced under nursery conditions a plant with deep-reaching and widespread roots - a true perennial plant.

Beautiful, vigorous stalks of the new grass, nameless as yet, are even now proudly stretching to the roof tops of the greenhouses at the Division of Forage Plants, Central Experimental Farm at Ottawa. To the layman they seem to possess many desirable characteristics. Dr. Stevenson and Dr. Armstrong both hope that the results thus far obtained in the nurseries will this summer be reproduced under the most varied climatic and soil conditions. Only then will it be learned whether the new grass can adapt itself to the wind, the sun, the cold.

The West will always remain a wheat growing country. Crop rotation, with the utilization of the newly developed "perennial wheat," if proven successful, and other grasses, will enable farmers to cultivate land which would otherwise remain dry and barren. Moreover, along fences and roads and on waste land this new grass will provide feed for our wild game and birds.

The men who have developed the new plant are eagerly awaiting the summer. They hope that 1940 will see the introduction into general use of a new and powerful weapon for combatting soil erosion.

would carefully remove with forceps its male portion, the three anthers, without injuring the delicate feathery pistil or female organ. The head was then covered with a glassine envelope to pre-vent contamination by foreign pollen.

In a day or so when the pistils became receptive to pollen, this was collected from the male grass parents and carefully dusted into each floret and the head covered as before, a small bag being tied to the stalk to record the parentage. It seemed a long and thankless task.

The work was onerous in such wide-species crosses the crossing success is low and several thous- and florets had to be emasculated and pollinated to secure a few seeds to establish the first genera- tion hybrids. But the men were tireless. Three, four years went by. Results began to show.

At first they were not too en- couraging. Attempts were made to cross some twenty species of Agropyron, extensive-rooted grass and of these only two proved possible, the Ag-ropyron Glaucum and Agropyron Elongatum. Hybridization of these two species with numerous vari-eties of wheat was then performed on an even more extensive scale. Hundreds of thousands of cross pollinations were carried through. Six thousand hybrid seeds were actually obtained.

This produced the first genera- tion. With trepidation and hidden, quiet unscientific emotion, the sci-entists and their aides watched the development of the first gen-eration plants. Would they produce results? Or would the work have

to be begun all over again? The first generation of the new grass proved to have the dominant characteristic of perennialism. But one set of hybrids involving the Glaucum parent was com-pletely self-sterile. The one involving Elongatum was only partially fertile.

This was a step ahead, but ap- peared to lead toward a dead end. For sterile plants are of little use. But the work kept up. The second and third generation of the new plants were grown from the partially fertile Elongatum-derived seeds.

Under ordinary circumstances the second generation clearly dem- onstrates the assortment and re- combination of characteristics re- ceived from the parents. In this case, however, 95 per cent. of the generation proved to be perennial. Then a large number of plants were selected combining perennial-ism, good forage quality, fertility and large seeds, and a third gen-eration established. But this gen-eration showed a decline in vigor.

The need to find another solution was indicated. The scientists re- sorted to another phase of genet-ics in the effort to secure the dou-bling of the number of chromosom- es to restore fertility. But how could this be achieved in a sterile seed?

The scientists turned to drugs. In recent years it has been discov- ered that chromosome-doubling in plants can be brought about by sub-jecting the seeds to weak solutions of certain chemicals for a definite time. One of the most effective of these is colchicine, a narcotic a'kaloid derived from the meadow saffron, a plant native to England. From a large
