CENTRAL GUARDIAN Trinity United Church First detachment

Describes wartime Of women arrive Scenes at Ottawa

"Observations From Ottawa" was the subject of an interesting address at Rotary yesterday by...

"Some take a greater interest than others in the forms and processes of Government and at times general interest therein becomes intensified. The present is such a period; the forces of democracy—government of the people, by the people, for the people—not only on trial but fighting for freedom—and life itself."

"It was on this account I know (that the short series of letters which I recently wrote to the Guardian from Ottawa were more widely read than they would have been in normal times. It was on this account too that your committee for today suggested that I speak. Political partisanship is properly barred at the Rotary table. But Ottawa without politics would be a dull town. I would not have been there without food. So if I am indiscreet I crave your sympathy."

"Government of the people is vested except on election day—(when every elector is privileged to exercise his individual power by the marking of his individual ballot)—in the Parliament of Canada—The King, the Senate and the Commons—for practical purposes in the House of Commons is supreme. The King or his representative signs what is duly placed before him. The Senate has certain powers which may delay or impede the carrying into effect of government bills passed by the Commons, and that power to delay or impede, in practice, is the Senate's chief contribution to the size of the majority favoring the legislation in the elective chamber. If the majority there is sufficient to pass a bill, it is evident that the people are not quite sure, whereas if the majority is decisive the Senate would hardly dare to exercise the power which it does enjoy."

"Our interest centres then in the House of Commons. Today we won't bother with the trappings—the fine setting for the show. The members could pass just as good laws and arrive at exactly the same decisions in Prince of Wales College hall as they do on Parliament Hill. The members of the British House of Commons are quite as efficient in the temporary quarters they now occupy as they were in that glorious traditional chamber at Westminster, so wantonly devastated by the dastardly Hun. Suffice it then to say that the people of Canada have of late the greatest privilege provided exceptionally handsome and commodious and convenient accommodation for those they send to represent them at Ottawa, and that they care for their every comfort while there."

"If all were present there would be two hundred and forty five members of the House of Commons chamber representing the two hundred and forty three constituencies into which all of Canada is divided. In this connection our own Queen's University and the University of Prince Edward Island would be well advised to make an end of our dual constituency and have our own representatives and I believe in the redistribution which will follow last year's census."

P. E. I. Representation "Prince Edward Island's representation at Ottawa is materially greater than a proportionate population basis would allow. With much less than one one-hundredth of the total population we have four of the ninety-six Senators and in the House of Commons we are represented by two members. It is a matter of fact that the population of Prince Edward Island would be reduced to two were it not for the provincial minimum guarantee that we may never have less than four. If over the years our interests are not well looked after it must be that we don't provide down here the number of men. At present Mr. Ralston representing Prince County sits next the Prime Minister, Dr. Cuyler MacMillan is also in the front row in one of the most desirable seats."

(Continued on page 7, Col 5)

ceeding with a bonderized plate which would not require any tin, the surface being protected by a special lacquer baked on at high temperature. This would be suitable for non-acid food products such as peas, green and wax beans, and other vegetables. This new plate may be available by next winter."

"Orders are being asked to produce large quantities of staple vegetables, some of these for Great Britain and her Allies, but it is impossible to forecast these needs exactly and in some cases production may be greater than domestic needs."

"In order, therefore, that canners and growers may produce immediately with plans for maximum production it has been arranged that the commodity prices stabilization corporation will stand ready to buy at guaranteed maximum prices any surplus of canned tomatoes, peas, corn and green and wax beans."

"Only those canners who pay growers the prices stipulated in the order will be entitled to sell their surplus to the corporation."

Prices To Growers The prices to growers must be \$1 a ton higher than in 1941 for tomatoes; \$7.50 a ton higher for peas on the same weight basis; \$3 a ton higher on corn; and on the average, \$5 a ton higher for green beans.

No maximum prices to be charged by canners are established for the Maritime Provinces but canners in New Brunswick, Nova Scotia and Prince Edward Island may qualify to sell their surplus production to the Corporation. Growers in these areas will receive five cents a dozen cans higher than that payable to Ontario canners.

To do so, he must comply with all the terms and conditions with respect to prices to be paid to growers."

PRINCE'S POEM Prince William, second son of King Gustaf V of Sweden, wrote a quaint poem, "To Norway" which he recited at a charity bazaar in Stockholm City Hall.

A New Container "In this connection it is made known that experiments are pro-

ceeding with a bonderized plate which would not require any tin, the surface being protected by a special lacquer baked on at high temperature. This would be suitable for non-acid food products such as peas, green and wax beans, and other vegetables. This new plate may be available by next winter."
