

\$10,800.00 GIVEN FREE.

The above amount has been given away by us in CASH PRIZES.

\$500.00 more will be given away as follows:-

1st prize	\$100.	5th prize	\$40.
2nd "	75.	6th "	30.
3rd "	60.	7th "	25.
4th "	50.	8th "	20.

5 prizes of \$10. each in cash
10 prizes of \$5. each in cash

Solve this puzzle and win a CASH PRIZE! There are 7 faces in the picture of the aeroplane which has taken a nose dive. Can you find them? If so mark each one with an X, cut out the picture, and write on a separate piece of paper these words, "I have found all the faces and marked them" and mail same to us with your name and address. In case of ties, handwriting and neatness will be considered factors. If correct we will advise you by return mail of a simple condition to fulfill. Don't send any money. You can be a prize winner without spending one cent of your money. Send your reply to

GOOD HOPE MANUFACTURING CO.

C. M. LAMPSON & CO. 64, QUEEN STREET, LONDON, E.C. 4.

ALFRED C. LAMPSON, CURTIS W. LAMPSON, C. B. E. A. V. FRASER, U. S. A. R. W. FRASER, U. S. A. SEPTEMBER 1927.

SILVER FOX SKINS

DEAR SIR, Owing to the large number of SILVER FOX SKINS now coming forward from Canada and the United States of America for inclusion in our Public Fur Sales, we have found it necessary to make certain rules under which only are we willing to accept consignments.

We have only by experience that except in the case of the very finest specimens higher prices are as a rule realised for lots containing a considerable number of Skins: this is especially noticeable in the case of the cheaper grades.

The buyers attending the Sales have only a limited time at their disposal and it is obvious that they are better able to examine a large offering if the number of lots catalogued is kept within reasonable bounds.

It is also clear that to enable us to make large lots we must be permitted to put the Skins belonging to different owners together, and, further, that Skins so lotted cannot be offered subject to a reserve price.

We therefore wish to give you notice that we are only willing to accept your shipments on the following conditions:-

- (1) We are to be at liberty to offer your Skins or any part of them, lotted with similar Skins belonging to other Owners.
- (2) We cannot include in our Sales Skins on which a reserve price has been placed.
- (3) Unless we hear to the contrary, we will assume that you desire to offer and sell all Skins consigned to us at the next Public Sale after their arrival in London: if, however, you should wish any of your Skins held for a later Sale, it will be necessary for you to inform us of this fact at the time of shipment.
- (4) It is understood that any Skins consigned to us by you, after the receipt of this circular, are subject to the above conditions, and that, in making your shipments to us, you agree to them.

We need hardly say that in lotted together Skins belonging to different Owners the greatest care is taken to ensure that only those of exactly similar character, quality and value are offered in the same lot.

C. M. LAMPSON & CO.

DIRECTIONS AS TO SHIPMENT.

PARCEL POST

Under the Post Office Regulations, packages to be sent by Parcel Post must not exceed 11 lbs. in weight.

PACKING
Skins should be carefully packed in parcels, the outer covering of which should be of canvas, unbleached muslin, cheese cloth, or some similar fabric.

SHIPPING
Each package must be clearly addressed to:-
C. M. LAMPSON & CO., 64, Queen Street, London, E. C. 4, England.

It is essential for the identification of shipments on arrival in London that each parcel should be distinctly marked on the OUTSIDE with the name and address of the Shipper.

It will also be found convenient to mark the first parcel No. 1, the second No. 2, and so continue with each succeeding parcel until the end of the Season.

These two points are of great importance, as large numbers of parcels are frequently delivered together, and without the name of the shipper and number on the wrapping it is extremely difficult for us to trace the ownership of the parcels.

INVOICE
At the time that the shipment is despatched an invoice MUST ALWAYS BE MAILED UNDER SEPARATE COVER to us at this address. This invoice should state:-

- (1) The number of parcels sent forward.
- (2) The number marked on each parcel.
- (3) The quantity of skins in each parcel.
- (4) Amount of Marine Insurance required.

Below we give an example of how the Invoice should be made out by you.

MARINE INSURANCE
UNLESS ADVISED TO THE CONTRARY, we will insure all shipments whilst in transit under our Open Policies, for invoice value plus 10 per cent. These policies give full protection from the time that the goods leave your possession until delivered to us in London, and the rate of premium is most reasonable.

As stated above, we should in every case be advised at the time the shipment goes forward of the amount of insurance required.

If it is not desired that we should arrange Marine Insurance this fact should be clearly stated on the invoice referred to above.

SHIPMENT BY EXPRESS
Skins may also be forwarded to London through any of the Express Companies.

Shipments by Express should be made in exactly the same way as by Parcel Post, except that there is no limit to the weight of packages and wooden cases may be used.

It is not necessary so far as the Marine Insurance is concerned to declare a value of more than \$50 per package to the Express Companies, as if full value is declared the Express Company will charge their rate based on the valuation.

NEW YORK
Information as to shipments of furs to London can be obtained from our New York Representative:-
Mr. ALFRED FRASER, 212, Fifth Avenue, New York City.

It is, however, unnecessary for you to advise Mr. Fraser of shipments made direct to us in London.

PAYMENT
Payment will, as a rule, be made by Dollar Cheque from our New York Office.

Should you prefer to be paid by Sterling Draft on London you should inform us of the fact when forwarding your invoice.

SAMPLE OF INVOICE

Dear Sirs, (Date) C. M. LAMPSON & CO., 64, Queen Street, London, E. C. 4, England.

I have to-day made to you a consignment of FURSKINS, particulars of which are as follows:

Forwarded per (Date) } The Shipper should write here to the office of conveyance, i.e. PARCEL POST, EXPRESS, etc.

Number of Packages sent forward } Parcel No. contains

Parcel No. contains

Parcel No. contains

Amount of Marine Insurance required } Yours truly,

(Signed) } The full name of the Shipper should be given.

Address } The full address to which C. M. Lampson & Co. are to acknowledge receipt of shipments and send proceeds of Sale, etc.

NEWEST NOTES OF SCIENCE

A bracelet has been invented to hold a ball of yarn on a knitter's wrist.

An English inventor's radio set has tiny receivers to be inserted in the ears.

Automobiles consume more than half of the plate glass used in the United States.

Aluminum is coming into general use in Germany as a substitute for copper in electrical devices.

Steel tape, locked in place with a special tool, has been invented to repair various broken articles about a house.

A canopy for open automobiles that a Minnesota man has invented is supported by a framework that folds compactly for carrying.

An attachment for dentists' grinding tools has been invented to catch the dust of precious metals that otherwise would be lost.

It is proposed to heat the entire city of Reykjavik, the capital of Iceland, with water pumped from the island's hot springs.

An asbestos pad to be fastened to an ironing board has been invented to hold hot flatirons, a rail preventing them sliding off.

The British army has been given a transport airplane that can carry 25 fully equipped soldiers and a hospital plane of the same size.

The temperature of the water in an automobile radiator is shown on an instrument board dial with a device patented by a Cincinnati man.

The French government has authorized the construction of a dam, navigable canal, and hydroelectric plant at the Kembs falls on the Rhine.

According to a Cincinnati expert, the loss sustained in the United States each year from smoke and its effects amounts to \$1,870,000,000.

British medical authorities have recognized radio reception as a valuable treatment for nervous ailments, as it soothes those who are so afflicted.

According to Geological Survey figures the per capita consumption of electricity in the United States has increased 70 per cent in eight years.

The Chilean government is experimenting with a process invented in that country that makes use of iodine in solution in the extraction of copper.

Outside of the United States there are 420 radio broadcasting stations, more than twice the number three years ago, scattered through 57 countries.

Portable apparatus has been invented in Germany for pumping hot air into new buildings to dry them quickly for occupancy soon after their completion.

When a pay-as-you-enter compartment is in use a coin-in-a-slot lock that a St. Louis inventor has patented displays the coin used to denote the fact.

On the average each ton of ore taken from the famous Rand gold mines of South Africa contains but six and a third pennyweights of the precious metal.

Though small enough to be carried in a pocket, new adjustable pliers for handling nuts of all shapes can withstand a strain of 500 pounds on the handle.

Increasing their daily capacity from 5700 tons to 7350 tons last year Canada's paper mills plan an additional 1200 ton increase by the end of this year.

The makers of a well known type of airplane are experimenting with an amphibian having but a single landing wheel, the floats being protected with skids.

A hydroelectric plant will be built along the River Jordan in Palestine, to supplement the power already being obtained from several oil engine generators.

Spring operated, a new automatic door closing device is built into a door frame in such a manner that none of its parts are visible when the door is closed.

After ten years of experimenting, two Englishmen have developed a method for making bricks from the sand that goes to waste after being used to polish glass.

Made of spring wire that adjusts itself to all sizes, a drying form stretches all the fingers and all the rest of a glove evenly after it has been cleaned.

A detachable cabin, to be brought to earth with passengers and pilot by a parachute in event of an airplane becoming disabled, is the idea of a German inventor.

When an intruder interrupts a beam of light, an alarm is sounded by a California scientist's invention that is featured by a light sensitive photoelectric cell.

Head telephones have been invented to be worn by a swimmer or under water worker to enable him to hear radio messages by plugging a long cord into a receiving set.

The government of Algeria has begun work on an extensive irrigation plan, damming streams in the northern section of the country and drilling wells in the southern.

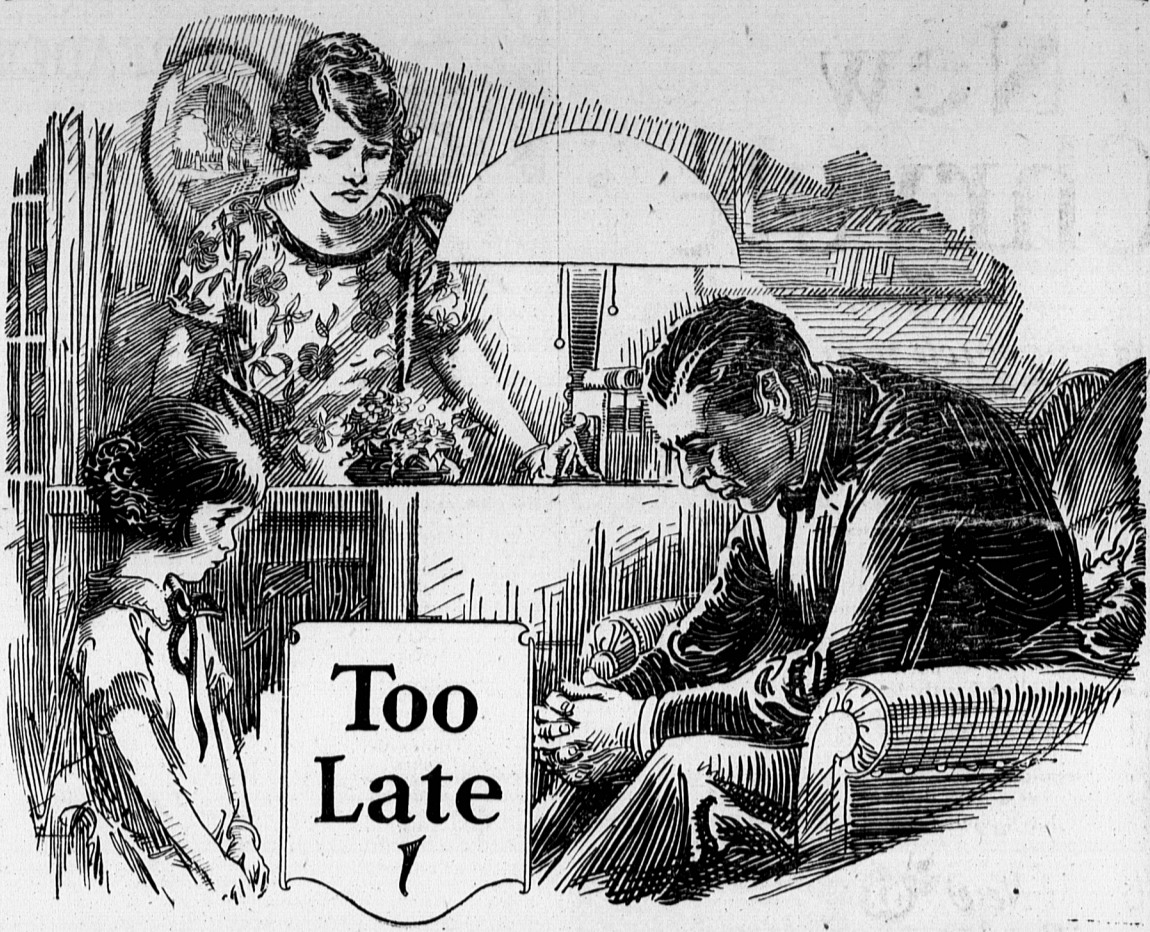

An automatic fuel regulator that has been invented for small automobiles provides a richer mixture when a car is climbing hills and a leaner one on descending grades.

The British government has begun a census of its citizen's feet to ascertain if there are not relatively few types with a view to standardizing the making of shoes.

To keep automobile drivers' hands warm fleece lined sheepskin mittens to be fastened to steering wheels so they cannot slip yet permitting instant withdrawal of the hands have been invented.

According to an Italian scientist living organisms that are too small to be seen with a microscope play an important part in enabling fireflies and other insects and animals to emit light.

Tests by the United States Forest Service have proved that larger seeds produce larger tree seedlings but the advantage often is lost by

Too Late

IN the bright heyday of youth, who could tell him of the storms that lay ahead? Later, when he had the full strength of manhood, who could hint to him of weakness or ill-health?

The need for Life Insurance protection always seemed dim and remote - - and because of this the day of decision was deferred.

And then came the time when he tried to get Life Insurance, but the attempt merely brought a

more grim realization of his need. His health was not what it had been.

Too late!

Avert this tragedy from your life! Obtain the security of Life Insurance while you may. Now, while you are strong and well, the protection of Life Insurance is obtainable, and the yearly outlay will be less than in the future. Decide today, and see a Life Insurance representative before you, also, are too late.

Horticultural Notes

At our country fairs this Fall, Governor Hartz commented very much on the value, both aesthetically and economically, of hedges and trees and groves, as are to be found around the farmsteads in certain sections of our Province, and I have no doubt, had also in mind the improved appearance and enhanced value, in more ways than one, of horticultural planting of shade trees and shrubs and flowers around the Hampshire school house and grounds, which has won much distinction in several years past for its beauty and improved appearance. He spoke chiefly of the former and the Minister of Agriculture took him at his word and asked would he give a trophy for the farm that showed the best and most improvement made in this respect within the year, that he would give three, one for each county.

The trees become full grown. This mistake is often made with what little attempt may be made in the planting around the farm buildings. The most important consideration for the first steps in proceeding to this work as it affects most of the farmsteads, is the planting of a windbreak to the north and west, that it may not only add to the appearance of the homestead when any of the conifer trees that is trees that are evergreen and bear cones, can be transplanted with reasonable success, namely, about two or three weeks before growth begins in the spring and about the same length of time after it ceases in the fall, but at best cut of the view. This may take the form of a grove or merely a hedge which may be allowed to grow its full height. The grove may be of hard or soft wood or both and may be any size desired. If space is limited a single row of native spruce will answer the purpose quite well. Its distance from the buildings should be judged in relation to snowdrift and should be sufficiently far away to allow room for the heavy blankets of snow to lay between it and the buildings. Such a windbreak to be effective must be kept tight or without gaps at the bottom, which means that until the trees get well grown it should be protected from the stock.

In the spring the work can be done in the fall with reasonable success, it attention is paid to the details of planting. It is poor policy, to attempt tree planting after seeding in the spring, as the percentage of casualties at that time will be comparatively high. There are two seasons of the year when any of the conifer trees that is trees that are evergreen and bear cones, can be transplanted with reasonable success, namely, about two or three weeks before growth begins in the spring and about the same length of time after it ceases in the fall, but at best cut of the view. This may take the form of a grove or merely a hedge which may be allowed to grow its full height. The grove may be of hard or soft wood or both and may be any size desired. If space is limited a single row of native spruce will answer the purpose quite well. Its distance from the buildings should be judged in relation to snowdrift and should be sufficiently far away to allow room for the heavy blankets of snow to lay between it and the buildings. Such a windbreak to be effective must be kept tight or without gaps at the bottom, which means that until the trees get well grown it should be protected from the stock.

ably a tree every foot, and when they have attained the desired size they must be trimmed annually. It must be protected from stock the first few years, if they are tempted to destroy it, and it will very much hasten the early part of the season for a few years at first. Some hedges along the front of the farm and lining the approach to the buildings, are an asset, and in their right place and this system may be extended with equal value to all the main fences. The placing of shade trees and shrubs and the location of flower borders in relation to this scheme of beautifying our farm homes, is a big subject, a brief outline of which will be given in our notes of next week. At this time, it will be good employment to discuss these plans with all the farm folk, get each one interested so that each one may take a pride in their home and contribute each a share in making it more beautiful, a better place in which to live and eventually look to the time when each farm will be a complete picture of landscape art in itself.
