Corns?

—just say

Blue-jay

to your druggist

Stops Pain Instantly

The simplest way to end a corn is Blue-jay. A touch stops the pain instantly. Then the corn loosens and comes out. Made in two forms—a colorless, clear liquid (one drop does it!) and in extra thin plasters. Use whichever form you prefer, plasters or the liquid—the action is the same. Safe, gentle. Made in a world-famed laboratory. Sold by all druggists.

PRAISE WORK OF REV. MR. MARSHALL

The following is taken from a Salkville exchange:— Over one hundred friends of Rev. Thomas Marshall, former pastor of the Methodist Church in Fredericton, N. B., for three years gathered at a farewell complimentary banquet which was tendered to him last week in the school room of the Methodist Church by the New Brunswick Temperance Alliance on the eve of his departure from the Maritime provinces for Montreal.

The first speaker of the evening was J. Willard Smith of St John, who spoke in appreciative terms of the work rendered in the Maritime provinces by Rev. Mr. Marshall during his 51 years of endeavor in this part of the Dominion. Mr. Smith also spoke of the pleasant relations with Mr Marshall in church and moral reform work and wished him Godspeed and long life.

Rev. W. D. Wilson, Field Secretary of the alliance, also spoke. He said that he had been associated with Rev. Mr. Marshall in the province of P. E. Island for several years in various forms of social work and it had been greatly through his efforts that he had been induced to leave church work to accept the position of secretary of the Alliance.

Rev. Mr. Wilson also replied to some of his critics in connection with the prohibition act and he stated that he could understand the reasons for many things which had been said but could not understand the reasons for others. It was some time since a man had come to him to tell him that he had heard that Mr. Wilson had been buying extensive property holdings and asked for a reason. Mr. Wilson had answered that he did not own a home anywhere and that the only property he owned in the world was a small lot in the Presbyterian cemetery which he had purchased as a last resting place for his departed son.

Mr. Wilson also paid a high tribute to the enterprise, vision and statesmanship of Rev. Mr. Marshall, trusting that he would on his arrival in Montreal find his family in better health and that he would always receive the blessing of the Most High.

The chairman of the gathering then presented Mr. Marshall with a substantial purse of money.

Other speakers of the evening included Rev. G. M. Young, pastor of the Methodist church, Rev Dr. Sutherland, pastor of the St. Paul's Presbyterian church; Rev. G. C. Warren, pastor of the Brunswick Street Baptist; Rev. Z. L. Fash, pastor of the George Street Baptist church; Rev. A. E. Chapman of Baie VVerte, Westmoreland County; Rev. E. A. Westmoreland of Taymouth; Col. W. J. Osborne and ex-Mayor Moses Mitchell.

THE BIG VANCOUVER PIER C. P. R. WILL START WORK ON

VANCOUVER, July 9 — The Canadian Pacific Railway Company is calling for tenders for the superstructure of the new pier which the Company is constructing here for the accommodation of its ocean liners.

The foundation fill for the pier is already in place. The new work will give employment to several hundred men for approximately 12 months. This is the largest work undertaken in several years in Vancouver by the Canadian Pacific Railway. The pier will be 850 feet long and 330 feet wide and its estimated cost is about two million dollars.

It is proposed to have it completed by September 30, 1923. Tenders are to be in by July 17.

BABY BARRACUDA ALARMS BATHERS

MONTREAL, July 9 — Barracuda, the ferocious fish that recently caused the death of Miss MacCatchie of Montreal West, who was fatally bitten while swimming off the Florida coast, have been found to inhabit Montreal waters.

Fishing in Lachine Rapids yesterday, J. Darnardo and Frank Dotton caught a baby barracuda, 29 inches long which snapped at its captors and which they eventually stabbed to death.

The news has caused consternation in bathing circles in Montreal.

Airplane Invented To Swim In Water

LONDON, July 8.—An airplane that according to its inventors promises to revolutionize flying soon will be submitted to practical test, according to information in aviation circles here. It is said to be unlike anything ever constructed before and is really a ship with wings. The utmost secrecy is maintained as to the details of its construction but it is said to mark the beginning of an aerial navy.

The plane is so constructed that it will not only float in calm waters, but it is claimed will be able to ride the roughest seas with the same security as an Atlantic liner. It is claimed that it will be equally airworthy. The hull is long, light and slender, without bulkheads. The elasticity of the hull which will make this possible is the outcome of many years' scientific research. The new machine will be a vast improvement on the present type of amphibians.

The experimental machine carries but seven persons, but designs for larger one have already been made. The airplane will carry four or six engines and will be capable of travelling 100 miles an hour. It will be equipped with fog horns, anchors and riding lights. When not in the air it can travel on the water and thus accompany a battle fleet under all conditions.

Machines designs chiefly for commercial service will be able to cross the Atlantic Ocean in less than forty-eight hours, it is claimed, carrying a heavy load.

BISLEY TEAM'S RIFLES ARE DETAINED IN CUSTOMS

LONDON, July 9 — The Canadian Bisley team which is to compete in the National Rifle Association's annual shooting matches at Bisley, had an amusing experience upon their arrival at Liverpool. Their rifles were temporarily detained in the customs at that port because of an oversight in the matter of obtaining a permit to bring firearms into Great Britain.

However the peaceful intentions of the invaders were apparently good and the English law was very quickly made to bend to the extent of overcoming the difficulty and the crack rifle team from Canada received permission to proceed with their firearms.

COPY OF SHAKESPEARE SELLS FOR $43,000

NEW YORK, July 8.—Henry C. Folger, president of the Standard Oil Company of New York, is the purchaser of the famous Daniel copy of the First Folio of Shakespeare, 1623, bought at the sale of Baroness Burdett-Coutts' library for $43,000. The price, which is the highest ever brougat by a First Folio, is not, however, the largest ever paid for a book, Mr. Folger having paid $100,000 several years ago for a copy of Skakespeare's plays, published in 1619 by Thomas Pavier.

GOOD NEWS.

The Canadian census is out. It gives the Dominion a population of about eight and three-quarter millions, and records, with two minor exceptions, a gratifying growth in each of the provinces. This is particularly ermarkable, seeing as Canada, in four of the last ten years, gave a large part of her population to war.

The best way to measure the Canadian increase in population is to campare it with that of some American State; Pennsylvania, for instance. Twenty years ago the Keystone State led the Dominion by a million inhabitants; 10 years ago by one-half a million; today they are practically abreast. Both show a rapidity of growth that is peculiarly American.

No people outside of Canada can be more pleased with this increase than the people of the United States, for not only is the Dominion the best neighbor a country ever had, but, with the single exception of Great Britain, America's best customer, in spite of the futile tariff walls that futile politicians on either side of the border have been at such pains to erect.—Boston Globe.

BROADCASTING STATION DESCRIBED

NEW YORK, July 8.—The radio receiving stations in the United States today are numbered by the tens of thousands, but the broadcasting stations are comparatively few and to the public at large they remain a mystery. Thousand of radio fans who "listen in" on lectures concerts, and the like, have probably asked themselves the question, "What is a broadcasting station like?"

A broadcasting station presents many interesting features. The huge aerial is most impressive. The powerhouse and the storerooms filled with wonderful "gadgets" are alike worthy of attention. But by far the most interesting part of the station for the average visitor is the magic room where the actual sending is done.

Imagine a compound of drawing room, office and electrical laboratory and some idea may be gained of what the transmitting room looks like. Near the door is a desk provided with what appears to be an ordinary telephone, but closer investigation shows that it is quite appropriately a wireless phone. At the far end of the room there is likely to be a piano. Against one wall stands a neat polished cabinet, close to which is a switchboard with an array of gauges and metres.

From the ceiling a number of large inverted horns hang down on wires, their purpose being to collect as much as possible of any sounds made by the voices of the performers or the strings of their instruments. A music stand and a few chairs usually complete the furniture.

A few minutes before a broadcast is to be given the director of the stations enters the room, watch in hand, and goes to the cabinet, which contains the apparatus that is capable of transforming the weak sounds of a human voice into wireless waves than range and wide through the ether.

The director glances over the instruments to see that all is well. Then comes an order for silence—a necessary precaution, since any word uttered may be heard by thousands of listeners in once the transmitter is working.

The hum of a distant dynamo is heard, a switch is thrown over with a click, and the next moment half a dozen huge valves are glowing in the cabinet. These big fellows, which are known as "P" valves, generate immensely powerful waves, and each requires 250 watts, almost a quarter of a horse power, to work it.

The director turns a knob here and a lever there until he is perfectly satisfied that all the adjustments are correct. Then he goes to his desk, picks up the wireless telephone and begins to speak into it—not to one person but to all who care to listen in. First comes the name of the sending station and then a brief announcement of the entertainment that is to follow.

REDUCING THE CANADIAN NAVY

OTTAWA, July 9 — The reorganization of the naval service department is proceeding rapidly. Five branches of the existing naval service departments have already been transferred to the fisheries department of Marine and Fisheries. The transfer of the naval service in its reorganized form to the department of National Defence will not take place until the act authorizing the establishing of that department has been proclaimed and this will await the completion of the organization of the new department, which is to include both naval service and militia.

The branches of the naval service which have been transferred to the department of marine and fisheries are the fisheries protection service; the radio telegraphs the hydrographic service, the tidal survey and the patrol of northern waters.

In carrying out the plans for the reduction of the naval force, the Aurora has already been laid up and the British members of her crew will sail for home on the Minnedosa on Wednesday. The Canadian members of the Auroras crew are being transferred to the four vessels which are being retained in the Canadian naval service. These will include two destroyers and two patrol vessels for training purposes.

The Safe Milk Supply for Summer

Summer heat makes no difference to the sweetness and purity of Carnation Milk. It will keep indefinitely, even in the summer, in the cans. And when opened, it keeps for several days. Carnation Milk is simply rich, "whole" milk—wonderfully fresh—reduced to creamy consistency by removing part of the water by evaporation; it is then sealed in new containers and sterilized.

Use it as it comes to you—to add flavor and deliciousness to coffee, tea, cereals and fruit. Add water for table use, for drinking and for ordinary milk uses. Begin today to end the anxiety about the milk supply that summer weather brings. Order from your grocer several tall (16 oz.) cans or a case of 48 cans of Carnation Milk.

The new Carnation Milk Recipe Book is sent free on request, and contains 100 delightful, tested recipes. Beautifully illustrated in colors. Write for a copy.

NO EGG SALAD DRESSING

½ teaspoonful salt, 2 teaspoonfuls Carnation Milk, ½ cup oil, ⅛ teaspoonful paprika, 1 tablespoonful lemon juice or vinegar. Put salt and paprika in a bowl; add Carnation Milk and mix thoroughly; add oil slowly stirring constantly. Then add the lemon juice or vinegar. This recipe makes ⅔ cup salad dressing.

SEMI-ANNUAL EXAMINATION OF NINE MILE CREEK SCHOOL AND FAREWELL TO MISS EDNA McDONALD, TEACHER

Despite the threatening attitude of the weather on the afternoon of June 28th over forty ratepayers and visitors turned out to attend the second semi-annual examination of Nine Mile Creek School since taken charge of at the beginning of the school year by Miss Edna McDonald, South Lake.

The pupils in the different classes were examined by Miss McIsaac, Miss Cahill, Miss Anna McPhee and the teacher, and clearly demonstrated by their prompt and correct answers that Miss McDonald is a most efficient and painstaking teacher and it is to be regretted that she has decided to leave the province and take up her profession in the Canadian West, for it is doubtful if Miss McDonald has many superiors in the teaching profession in this Province—at the conclusion of the examination Mr. Neil McDonald was appointed chairman and those present were entertained by the pupils who rendered an excellent programme, comprising dialogues, recitations, songs and exercises, all of which was greatly appreciated by those present and showed much careful training on the part of the teacher.

The programme being concluded Miss McDonald was called to the platform by the chairman and the following address was read by Miss Essie Taylor.

Dear Teacher,—We learn with sincere regret that at the termination of the present school term it is your intention to sever your connection with our school, we cannot therefore let this opportunity go by without expressing in a small way our appreciation of you as our teacher, instructor and friend, since you were placed over us almost one year ago. No doubt your patience has often been sorely tried by our waywardness during school hours, but we ask you dear teacher to forgive us our many faults which may have caused you any displeasure in the past for we now fully realize that any rebuke given by you was for our own good and will be a lasting benefit to us, and we feel that the discipline taught by you will be a lasting asset to us all in the years to come.

Now dear teacher we ask you to accept this small gift and as you look upon it when you have gone from us may it call up fond memories of the days spent among us as our teacher, and as we will soon be saying good bye to you our earnest prayer and wish is that the sunshine of perpetual happiness may saine across your pathway as you journey through life and may the Great Teacher above abundantly bless you. Signed on behalf of the pupils of Nine Mile Creek School.

Essie Taylor, Katie Smith
Joseph Walsh, George U. McPhee

During the reading of the address, Miss McDonald was presented with a beautiful gift in French Ivory. Althouga taken completely by surprise McDonald feelingly replied thanking the pupils for their kindness. After a few remarks by Mr. Archie McDonald, ice cream and cake in abundance was served to all present. The singing of the National Anthem brought to a close a day long to be remembered in the history of the school.—Com.
