"The Strongest Memory is Weaker than the Weakest Ink."

TUESDAY, MARCH 15, 1938

Mr. Dunning's Opportunity

One advantage of Finance Minister Dunning's visit at this season is the opportunity it afforded him of appreciating our water transportation drawbacks.

As was shown by Board of Trade members at the Kowell Commission sittings, prior to the inauguration of the car ferry service our farmers only received about 50 per cent of the value of their field products.

Even the Toronto Globe and Mail, which views our representations with a somewhat jaundiced eye, admits that we have done our best, as a Province, to observe our obligations and responsibilities.

When we recall the huge sums spent on the Hudson Bay railway and port, on canals and other services carried on for the benefit of the Central and Western provinces, is it any wonder that we should expect from an influential representative like Mr. Dunning a strong presentation of our transportation claims at Ottawa?

The Nazi Menace

Czechoslovakia has again become the centre of European interest. The union of Austria with Nazi Germany put this independent republic of some 50,000 square miles "on the spot," so to speak.

The Czechoslovak State is a full-fledged Republic, with democratic legislative institutions and a constitution which guarantees civil, political and religious rights to all citizens.

The right of the Czechoslovak nation to complete independence was recognized by France, England, Italy, the United States and indeed all the Allied governments.

Good-Bye To All That

It is not the least remarkable feature of recent Empire foreign policy developments to find, says the Hamilton Spectator, our old friends, the Canadian isolationists and pacifists, sharpening their tomahawks and hitting the trail for battle.

just as loudly as they once howled for independence from the toils of Europe.

The growling, capitalistic, dominating British lion has for them become a timid and shabby beast, yielding to dictators just to keep out of war.

They wondered once why Canada should keep any army or navy or any air force. It was wasted money. They bombarded "imperialists" who had the nerve to tell the Dominion that possibly she did owe a portion to the defences of the Empire.

Now they turn their lecturing to Premier Chamberlain and such "weak-kneed" statesmen who are forced to view a changing and treacherous Continental picture with apparently less perspicacity than those brilliant observers who are three thousand or more miles from the scene.

They would have a world in Armageddon to hold up the shattered illusion of Collective Security. The, would have the Empire fight every one's battles but its own.

They announced defeated Germany could well have back some of the territory she lost to the allies in the war—until they saw those territories came close to the dominions.

Canada, having won her independence, would have no part in the machinations of British war-mongers—not unless those war-mongers happened to back up their own opinions.

What a pity that these political idealists cannot bring more force to bear on the imperial councils!

But what a remarkable change in a few short years!

Out-voted, Not Out-argued

"Don't you know that the latest statistics show there are 1,645,000 surplus females in England and Wales?" demanded a feminine member of the Leeds Council, her arms akimbo, rising to exhortate the male councillors for voting a resolution requiring women Council workers to resign on marriage.

"Don't you know that you are fostering immorality and imperiling the future of the race by deliberately encouraging our finest women to remain single?" The speaker's political affiliations are Conservative. Four Laborite sisters rallied to her as one sister. "Men who support this proposal are of Oriental mentality," observed one scornfully. "Women will have to go back to their harems." Said another: "The member responsible for the proposal may be an admirer of Hitler."

So far, the English have shown an extraordinary calmness over the news that Hitler has ordered the evacuation of the British children to Canada.

Let it not be forgotten that war in any case brings something similar to Fascism into any democracy involved. But remember the millions of children and young men who would spread the sacrifices of war not only among the people who have little influence other than their vote, but also among those whose economic position makes war less onerous for them.

But remember the millions of children and young men who would spread the sacrifices of war not only among the people who have little influence other than their vote, but also among those whose economic position makes war less onerous for them.

January imports of fertilizers were of the value of \$107,246 compared with \$345,005 in the previous month and \$177,149 in January, 1937. Imports from the United States aggregated \$54,899, Netherlands \$25,142 and Belgium \$13,786.

The lowly potato found a distinguished champion when, before a packed hall of doctors and dentists at the Academy of Medicine, Toronto, Dr. John Oppie McCall, Director of the Guggenheier Dental Clinic, New York City, said that a substitution of potatoes for cereals in young children's diet had markedly decreased dental decay.

There is a continuity to business as well as a desire to profit. Whether a business passes from father to son, or through a succession of many stockholders, the prime purpose is to keep it alive and thriving and in this purpose is inevitably implied an intention to make good, to command markets, through merit of the product or service in competition with others.

NOTES BY THE WAY

Last but by no means least in the different defence estimates before the British Parliament were those in regard to the Navy.

Lord Halifax spoke at Doncaster at a dinner of the Doncaster Branch of the Royal Canadian Legion.

Great oaks from little acorns grow, and claims worth a couple of hundred thousand dollars are being made to Canada.

So far, the English have shown an extraordinary calmness over the news that Hitler has ordered the evacuation of the British children to Canada.

Let it not be forgotten that war in any case brings something similar to Fascism into any democracy involved.

PUBLIC FORUM

This column is open for the discussion by correspondents of the issues of the day.

THE VOICE OF THE PEOPLE

Sir—As our unique form of government will be in session very shortly, would it not be a movement in the right direction, for the section to "talk up" to their representatives? It cannot be doubted that there is general dissatisfaction with the doings of the elected, at least year's session.

Was it by the voice of the people that the government was allowed to appropriate the property and homes of farmers and others against their will and without allowing them to have any say in the matter of compensation?

Was it by the voice of the people that the prohibitory law was ignored and tens of thousands of gallons of rum sold as government "medicine"?

Did the people authorize the pact with a brewery to encourage the habit of drinking?

Do the people hold the view that it is more important to have well bred horses, than to have a better rising generation? Electors: it is up to you.

I am, Sir, etc., E. HUGHES

SENATOR HUGHES AND PEACE

Sir—On Saturday last, the 5th inst., I had the pleasure and the privilege of listening to an address by Raymond Leslie Buell, Ph.D., President of the Foreign Policy Association, New York, before the Canadian Club at the Chateau Laurier.

Dr. Buell appears to be an observing man, and has good opportunities to get information on current events, and is somewhat hopeful that there will not be another world war in the near future; nevertheless, he fears that such a catastrophe might be precipitated by any one of several accidents, because of the present tense situation among the nations of the world.

So far, the English have shown an extraordinary calmness over the news that Hitler has ordered the evacuation of the British children to Canada.

Let it not be forgotten that war in any case brings something similar to Fascism into any democracy involved. But remember the millions of children and young men who would spread the sacrifices of war not only among the people who have little influence other than their vote, but also among those whose economic position makes war less onerous for them.

School-curriculum Discussion

By J. C. Lewis

MATHEMATICS

To the Mothers and Fathers of the Province: An uncle of yours dies in Australia and leaves \$6000.00 to you and your sister. The will provides that she is to receive \$800.00 more than you. What are your respective shares? Now, such a simple problem, solved by the "roundness" of the figures, most of us, I think, would not bother with a pencil, say nothing of resorting to algebra, for the solution. We should mentally divide both sums into equal parts, subtract one of the small sums (\$400) from one of the large ones (\$6000) which would give you your share and add the remaining \$400.00 to the remaining \$3000.00 which would give you your sister's inheritance.

Asked the reason for the adding, subtracting and dividing, we should be some time explaining our system. But had we resorted to mathematical language, every step in the process would have been clear-cut and clear. Let x be your share. Then x plus \$800 is your sister's share. Both together equal the \$6000. This gives us a mathematical statement:

x plus (x plus \$800) equals \$6000. or 2x plus \$800 equals \$6000. or 2x equals \$5200. or x plus your share equals \$2600. and x plus \$800 (your sister's share) \$3400.

Total (proof) equals \$6000. Mathematics is commonly believed to be the language of science but this general belief, like so many others, is not exactly true for each branch of science has its own peculiar speech. But there are scientific concepts which can only be understood in mathematical terms and among others of this class is Einstein's law of relativity for the understanding of which, I am told, some knowledge of calculus is indispensable.

It is not necessary for us to study higher mathematics in order to understand what is going on around about us. Even if all of us had the ability to master such a subject, few of us have the inclination to pursue deeply a study in which we are not greatly concerned. But there are secrets of nature which cannot be penetrated without mathematics and there are scores of activities in this modern age which are only made possible through a knowledge of it. To my way of thinking, it is, after English, the most important of all subjects on the curriculum. To know something about it—its language and its history—is worthwhile and to be able to handle a little algebra and geometry is an ability which every child in this Province should have the opportunity to acquire.

The history of mathematics began from the day when man became a keeper of sheep and cattle. In order to prevent confusion, it was necessary for each to keep track of his possessions. Thus, as agriculture developed some device had to be invented for the measuring of land. The region of the Nile was the birthplace of geometry because, periodically, the Nile river overflowed its banks spreading ruin in its flood and obliterating all signs of individual ownership. Where was this man's field? It should be about so long, but... A knowledge of geometry, or land measure, settled all uncertainties. The building of temples and pyramids required a knowledge of geometry because, periodically, the Nile river overflowed its banks spreading ruin in its flood and obliterating all signs of individual ownership. Where was this man's field? It should be about so long, but... A knowledge of geometry, or land measure, settled all uncertainties. The building of temples and pyramids required a knowledge of geometry because, periodically, the Nile river overflowed its banks spreading ruin in its flood and obliterating all signs of individual ownership. The building of temples and pyramids required a knowledge of geometry because, periodically, the Nile river overflowed its banks spreading ruin in its flood and obliterating all signs of individual ownership. Where was this man's field? It should be about so long, but... A knowledge of geometry, or land measure, settled all uncertainties. The building of temples and pyramids required a knowledge of geometry because, periodically, the Nile river overflowed its banks spreading ruin in its flood and obliterating all signs of individual ownership.
