Hahn Shatters World Record

TRACK, N. Y., March 5.—Lloyd Hahn, rugged Bowler, A. A. star, ran the greatest half mile in track history last night, shattering the world's indoor record as well as surpassing the outdoor mark, by winning a special race in one minute 51 2-5 seconds in connection with the I. C. A. A. A. championships. Hahn's performance smashed to smithereens the 24-year-old indoor mark of 1:54.3-5 made on March 19, 1904, at Buffalo, N. Y. It also surpassed the outdoor record of 1:51.3-4 established at Stamford Bridge, London, in 1926 by Dr. Otto Peltzer. Dr. Peltzer, the German champion, was a spectator last night as Hahn circled the last intercollegiate track four times in probably the greatest race of his career.

WHEATLEY RIVER. The members met at the home of Mrs. T. D. Lig, when roll call was answered off by "valentine verses". Plans were considered to hold a concert as a means to increase the funds for the hall. Roll call for next night to be answered by Irish jokes or stories. Lunch was then served by the hostess.

BIRTHS

BATE.—In Fredericton, N. B., on Friday, March 2nd, to Rev. A. F. and Mrs. Bate, a daughter.

DEATHS

MCCARTHY.—At Mount Stewart, Monday, March 5th, 1928, James McCarthy, aged 59 years. Funeral Wednesday at 2 o'clock, from his late residence.

MATHESON.—At Rose Valley on March 2nd, Malcolm D. Matheson, aged 80 years. Funeral took place Monday, March 5th, at 1:30 o'clock.

SMALLWOOD.—At the P. E. I. Hospital on Monday, March 5th, 1928 Charles R. Smallwood, aged 73 years. Funeral will be on Wednesday, March 7th. Private service at his late residence at 11 a. m. after which the remains will be placed in St. Paul's Church for service at 2.30 p. m. Interment Peoples' Cemetery. The church will be open to the public from 1 p. m.

CHALLENGE

We, the Saint Pats of Albany, do hereby challenge the Arrows of North Tryon to a home and home game of hockey, first game to be played in the North Tryon Rink Wednesday night, March 7th. This challenge must be answered through this paper only.

TO THE DELEGATES OF THE VARIOUS FARMERS' ORGANIZATIONS:

On the occasion of the annual meetings of the various Farmers' organizations, I wish to extend to you a very cordial welcome.

So interwoven and interdependent here are rural and urban interests that they at once become mutual. Your success is our success. May your deliberations during this week assure your continued prosperity. Courtesy and welcome mark the opening wide to you of the gates of the City.

I. J. YEO, Mayor of Charlottetown.

GIRL ORATORS WIN LACOMBE, PONOKA TESTS

Katherine Newton and Ruth Steele Capture Respective Contests

LACOMBE, March 5.—The Journal oratorical contest for Lacombe High school was held in St. Andrew's United church before a large audience last night. Dr. E. Y. Sharpe, chairman, explained the origin and extent of the contest.

The orators spoke in the following order: Grace Chesson, Francis Tyrrell, Fraser Layton, Katherine Newton and Phyllis Melrose. The judges were Mrs. Jones, Messrs. N. E. Carruthers and J. S. McCormick.

The literary club of the school entertained an impromptu audience through Miss Kathleen Walters in a piano solo, and Miss Helen Barbour in a vocal solo, while the judges retired to reach their verdict.

They were unanimous in awarding first place to Miss Katherine Newton. Miss Newton is the only daughter of Mr. and Mrs. William Newton and was born in Lacombe on December 29, 1911. She is in grade ten.

The judges considered all the speeches good, but Miss Newton excelled in expression. Principal J. C. Jonason thanked the judges and the artists on behalf of the school, and the meeting closed with the national anthem.

RUTH STEELE WINS CONTEST AT PONOKA

(Special to Edmonton Journal) PONOKA, Feb. 24.—A large crowd gathered at the town hall to hear the local elimination for the Dominion oratorical contest. Gordon Larson, Gertrude Durkin, Frances Jones, James Harmon, Marjory Gordon and Ruth Steele were the speakers in the above order. The more there are of them the more magnificent the effect. Their chief charm is their soft and luring coloring due to a bloom upon the flower, a film similar to the bloom upon a grape. This softness even the most brilliant and burning scarlets to a quality not found in other flowers. There are no raw colors.

There is about ten days' difference between the time the latest and the earliest come into bloom. Clara Butt is one of the latest and one of the finest pink in the entire Darwin list. They range from 28 inches to 40 inches in height, a factor to be considered in planting beds as well as the blooming season. A favorite combination is of the pink and lavender shades. Revered Ewanck and Dream are two of the latter class that are much esteemed.

In the rose tones, Baronne de la Tenayse is a favorite. Gretchen is the most delicate of the pinks and in the whites or as close to pure white as we have available, although they are lightly tinted, Wedding Veil and White Queen are excellent. Mr. Farmcombe Sanders is one of the best of the reds, a mingling of scarlet and rose. Europe is a more dazzling red and Glow one of the most brilliant. In the darker reds Ariadne and William Pitt are standbys.

Zulu, La Tulipe Noire, Mrs. Peter Palmer, Philip de Commines and others give a fine range of deep dark purples.

Many of these tulips are very much alike and one is about as good as another, the choice being merely a matter of personal taste. One cannot make a mistake in ordering any of them from catalogue description even if he has never seen them.

One of the most pleasing uses of these tulips is for small groups in the hardy border among the later perennials whose foliage grows up and hides the dying foliage of the tulip after its blooming season. Another method is to carpet the tulip bed with some low-growing early perennial such as forget-me-nots, double daisies, arabis or aubrieta. In this case the tulips should be given more room. Ordinarily they are planted from six to ten inches apart. Ten inches is better if there is to be an underplanting.

SHERBROOKE.—Nine members and seventeen visitors met in the hall. The report of the sick committee was heard. Mrs. George Pickering and Mrs. A. J. Linkletter were appointed on the new committee. The school committee appointed as follows:—Mrs. L. Milligan and Mrs. L. B. Linkletter. The bills for the quilt committee amounted to \$3.10 and was requested paid. The committee that was appointed to find out about the handicraft exchange decided on making a tulip apron. Mrs. L. B. Linkletter and Mrs. Townsend were appointed to mark off spread and all the other members to help in tuffing.

AMISK, Feb. 25.—Jack Lees, who is the school champion at Amisk for the Oratory contest, won a medal in 1925 as the best of the pupils from the eight schools in this district who competed in an oratory contest in connection with the

WILL FUSILIERS PLAY THE BEARCATS ON ARTIFICIAL ICE?

If Not, Then Charlottetown Should Make An Effort To Have The Third Game Played Here.

Judging by the number of phone calls answered by the Guardian news staff last night with reference to the Fusilier-Bearcat play-off game, which took place in Saint John, and ended in a 2-2 deadlock after ninety minutes of hockey—and again when one considers the general interest and enthusiasm manifested throughout the city, one would think that the Abegweits or Crystals were in the play-down.

Never before in the history of the national game in this city has there been such dynamic interest in the outcome of a play-off between two mainland teams.

As above noted the game ended in a tie, therefore necessitating a third game on neutral ice. This question now arises, where will

FISHERIES STATISTICS, 1927 INCREASE IN VALUE, DECREASED QUANTITY SYNOPSIS OF FIGURES, ISSUED FEB. 23, 1928

Historical. The Fisheries Department, Ottawa, has issued the following preliminary report of the fisheries of P. E. Island, in co-operation with the Department of Fisheries, of which the subjoined are summary figures:

Production. "The total value of production of the fisheries of Prince Edward Island for the year 1927 was \$1,367,807, compared with \$1,353,934. These totals represent the value of the fish marketed, whether for consumption fresh or canned, cured, or otherwise prepared. The increase in value is accounted for by the higher prices obtained for some of the fish products in 1927, as the catches of all of the principal kinds of fish were smaller than in 1926. Lobstering is the most important branch of the fisheries industry of Prince Edward Island, its product in 1927 representing 63 per cent. of the total value of production of the fisheries of the province. In 1927 the total catch of lobsters was 62,800 cwt., a decrease of 3,498 cwt. from the previous year, while the marketed value was \$859,917, a decrease of \$70,801. The fish which contributed chiefly to the increase in total value of production was the sweetfish, which almost doubled its marketed value, although the catch was less than in 1926. The catch of smelts in 1927 was 14,936 with a marketed value of \$179,232, compared with 15,390 cwt. and a marketed value of \$98,670 in 1926. On the other principal kinds, cod showed a decrease in catch and an increase in marketed value, while herring and oysters showed decreases in catch and in marketed value. Statistics of production are given in tables 1, 2 and 3.

Capital Equipment and Employees—Primary Operations

Capital.—The amount of capital represented by the vessels, boats, traps, nets, piers and wharves, etc., used in catching and landing the fish was \$866,833, a decrease of \$38,212 from the preceding year.

Employees.—The number of men engaged in these operations in 1927 was 2,675 compared with 2,916 in 1926.

Fish Canning and Curing Establishments. Capital.—The total amount of capital invested in fish canning and curing establishments was \$250,640, compared with \$260,575 in 1926. These totals comprise the value of land, buildings and machinery, supplies on hand and cash and operating accounts. The number of establishments in operation in 1927 was 137, a decrease of 9 from the preceding year. The number of lobster canneries was 133, compared with 137 in 1926; the number of clam canneries, 2, compared with 3, and the number of fish curing establishments, 1, compared with 6. One establishment classified as a miscellaneous fish cannery in 1927 was formerly operated as a clam cannery.

Employees.—The number of persons employed in the establishments in 1927 was 1,449, compared with 1,544 in 1926.

Tables 4 and 5 contain statistics of capital and employees for 1926 and 1927.

The biggest surprise of the Report Palmer, Philip de Commines and others give a fine range of deep dark purples.

port is that the modest little smelt has contributed the largest portion of the cash realized and showed the least sign of depletion, if any. Once in our history this fish fairly choked our streams in Spring time and were quite a god-send to the natives. As there was none of them shipped in those days—as to 30 years ago—the people on the Morell, Dunk and other large streams were in the habit of taking them in large quantities for fertilizing purposes, but probably it was the salt they imparted to the soil instead of the flesh of the fish that did the work of fertilizing. At all events, times have changed, and it is now woe to the poacher who is caught destroying them in the spawning or in fact any season. Now they are considered a "dainty dish" and are greatly relished as a luxury in the larger cities of this country and the Eastern States.

While thankful to the Department for the copy sent us, we may say that we cannot summarize it further than we have done. It may suffice for the present to call the attention of the Department to the necessity of or the importance of expending some money on developing the river beds by getting rid of the mud banks that in many cases have eddied out to the middle of the streams, thus preventing the natural process of propagation. This is particularly so in the case of the salmon. But care should be taken not to interfere with the gravelly bottom of the stream as they are the means by which the fish are propagated. If such cleansing would soon restore the larger streams to serve as haunts for these ever delicious salmon species, and perhaps others as well.

We have heard or seen it stated lately that the Department contemplated taking up work of this kind at an early day in our fishing grounds, and if this is the case it is highly commendable. With proper care and protection our fishing beds could be made mines of gold for our fishermen and fish dealers, and become the most valuable dietary product our home people could place on their own tables. If they would consume larger rations of good fresh fish they would save a lot of money on medicine and funeral expenses.

Then let us hall every step made towards the development of our fisheries for the reasons stated and for the additional profit that is in sight for landing our fresh fish on our great fish markets abroad before they are spoiled by soft weather thawing cold storage and running the fish in transit. This may yet be the salvation of the fresh fish industry through the airplane.
